How to adjust the orientation of solar panels:

1. The first location with the most direct sunlight during the day.
2. If the solar panel leans back by 30°.
3. If you are in the northern hemisphere, point it southwards. If you are in the high-latitude area, please contact us for more details.

Camera and Solar Panel Installation and Connection:

Insert the solar panel connector cable into the camera's type-C power port.

6. The 18° angle of solar panel can be adjusted vertically, with a maximum angle of 30°.

7. After installation, please check all locking components to ensure they are securely fastened.

8. Please use a soft cloth damp cloth to wipe the surface of the solar panel on a regular basis, in order to remove dust or debris.

Working Status Description

Indicator light status	Type and Function (Status and Event)			
	Light off	Flashing (Red)	Flashing (Green)	Flashing (Blue)
Red light	×	×	×	×
Green light	×	×	×	×
Blue light	×	×	×	×

• Quickly flashing Red: Camera videos are being viewed.
 • Quickly flashing Green: Device is recording.
 • Quickly flashing Blue: Device is recording. Flashes 3 times before turning off. Indicates data backup is in progress.
 • Slowly flashing Red: Waiting for network connection.

● The manufacturer reserves the right to adjust the product's functional status through firmware upgrades or software adjustments.

Important Statement

Personal Information Security

To ensure the safety of you and your family, please make sure that your product is only bound by authorized persons. Botastar will make sure that your products to ensure the security of your and your family's information.

Precautions

1. To achieve better night vision imaging results, keep the lens front or side away from reflective objects such as glass and white walls. This will prevent nearby objects from appearing to brightly white while objects appear dark in the camera's view.
2. Please place the device in a location with good network signal reception and keep it away from metal objects (such as metal brackets, metal rods, and wireframes) or other sources of signal interference.
3. It is normal that the equipment generates heat during operation. This product is designed to operate within a temperature range of 0°C to 40°C. Do not use this product in environments that are too hot or too cold.

Working Status Description

The manufacturer reserves the right to adjust the product's functional status through firmware upgrades or software adjustments.
