

# FCC RF Exposure

EUT Description: Wireless Controller

Model No.: SW038

FCC ID: **2A29X-SW038**

## 1. Limits

According to KDB 447498 D01 General RF Exposure Guidance v06 The 1 - g and 10 - g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:  
[[max power of channel, including tune - up tolerance, mW]/(min. test separation distance, mm)] • [  $\sqrt{f(\text{GHz})}$  ]  $\leq 3.0$  for 1 - g SAR and  $\leq 7.5$  for 10 - g extremity SAR,

Where:

Result=P/D\*  $\sqrt{F}$

F= the RF channel transmit frequency in GHz

P=Maximum turn - up power in mw

D=Min. test separation distance in mm

## 2. Test Result of RF Exposure Evaluation

	Output power (dBm)	Tune Up Power (dBm)	Max Tune Up power dBm/mW	Min test separation distance mm	Result	Limit	SAR Test Exclusion
BT	1.716	1 ± 1	2/1.58	5	0.49127	3.0	Pass
Note: PK Output power= conducted power. Conducted power see the test report <b>HK2109233623-E</b> , antenna gain=0dBi							

Per KDB 447498 D01, when the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine RF Exposure test exclusion. The test exclusion threshold is 0.49127 which is  $\leq 3$ , RF Exposure testing is not required.

Note: Exclusion Thresholds Results=[  $\sqrt{\text{max. power of channel, including tune-up tolerance, mW}}$  /  $\sqrt{\text{min. test separation distance, mm}}$  ] • [  $\sqrt{f(\text{GHz})}$  ]

f(GHz) is the RF channel transmit frequency in GHz

Distance=5mm
