

Wireless Router

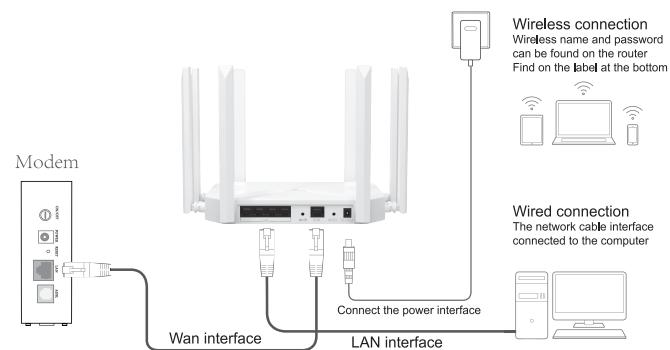

Quick Installation Guide

Note: The product images in this guide are for illustration purposes only. The number of antennas, port quantity, type, and location should be based on the actual model.

Router Internet Configuration Method

1: Hardware Connection

Please connect the router as shown in the picture.

2. Set up a router

2

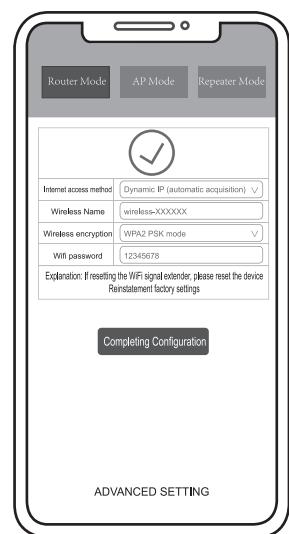

1

Power: DC 12V 1A
IP: 192.168.11.1
Passwork: 12345678
SSID: wireless-xxxxxx
MAC: XXXXXXXXXXXXXXXX

Set up the router After the connection is successful, the phone will automatically jump to the management interface. If it does not jump, please manually open the browser and enter the address in the address bar. For the Internet access method in router mode, please select according to the method provided by the service provider. (Refer to the common questions and answers below for the Internet access method).

3

After recording the configured information, click Next to complete the setup. If the wireless connection is disconnected, please reconnect to the network using the wireless name and password that have been set up.

Frequently Asked Questions and Answers: Q: What should I do if I can't open the router's management interface (192.168.11.1)?

If you are logging in via a wired connection:

- Make sure that your computer is set to "Automatically obtain an IP address" and "Automatically obtain DNS server address"
- Make sure that you connect your computer to the LAN port of the router
- If you are logging in via a wireless connection:**
- Make sure that your device is connected to the wireless network of the router.
- Try closing and reopening your browser, clearing your browser cache, or using a different browser
- Try using a different device to connect to the router. If it's a wired connection, try using a different LAN cable
- Try to power cycle the router

Q: What should I do if I can't access the internet after setting up the router?

- Make sure that the network cable between your router and modem is connected correctly according to the instructions in the "Hardware Connection" section
- Make sure that the internet access method you chose in the "Set up the router" section matches your actual network environment.

How to determine the internet access method can refer to the following table:

The internet access parameters provided by the internet service provider (ISP) when opening a new network service	Internet access method
account and password	Broadband Dial-up Internet Access
IP Address, Subnet Mask, Gateway, and DNS Server	Static IP Address.
The ISP did not provide any parameters (the computer can access the internet directly without any settings when not using a router)	Dynamic IP (DHCP)

What should I do if my phone, tablet, or laptop cannot connect to the wireless network?

- Make sure that your device's wireless function is in normal state. For example, the wireless is turned on and can search for wireless signal.
- Make sure that the wireless router is set up correctly. Do not use Chinese or special characters for wireless names.
- Make sure that the wireless name and password you entered are correct (case sensitive).

How to restore the router to factory settings?

- While the router is powered on, press and hold the "RESET" button on the back panel of the router until the system indicator light flashes, then release the button.
- Note: Restoring the router to factory settings will erase all configuration parameters, and you will need to reconfigure the router from scratch.

FCC Warning:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.
