

FCC ID:2A2HR-4E25959G01

Air Purification Device

4E25959G01

1. Description

Graphene-enhanced photocatalytic oxidation process produces high volume of hydroxyl groups that have been proven to degrade VOC (volatile organic compounds) and kill airborne bacteria and viruses.

2. Unique technology: Graphene-enhanced Photocatalytic Oxidation

3. Exploded view of Module D

4. Specification

Description	Air Purification Device			
Part Number	4E25959G01			
Size	Length 380mm x Width 225mm x Depth 25.4mm			
Voltage	Max 35V	Typ 24V	Min 20V	Condition DC
Current	Max 2.5A	Typ 2.3A	Min 2A	Condition 24V
Power	Max 60W	Typ 55W	Min 44W	Condition 24V
Weight	N.W 1328g			

The temperature of the test environment is 28 degrees Celsius, and the equipment is ventilated normally.

FCC statements:

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications or changes to this equipment. Such modifications or changes could void the user’s authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
