#### TEST REPORT DECLARATION

Applicant : Suzhou MobyData Smart System Co., Ltd.

Address : 3f, building E, Yida science Park, No.11 Jinpu

Road, SIP, Suzhou, Jiangsu, China.

Manufacturer : Suzhou MobyData Smart System Co., Ltd.

Address: 3f, building E, Yida science Park, No.11 Jinpu

Road, SIP, Suzhou, Jiangsu, China.

EUT Description : Mobile Computer

Model No. : M52 Luna

Trade mark : MobyData

Serial Number : /

FCC ID : 2A398-M52

Test Standards:

# FCC Part 15 Subpart E 15.407 (2020)

# FCC KDB 905462 D02: U-NII DFS Compliance Procedures New Rules v02

The EUT described above is tested by Shenzhen Academy of Metrology and Quality Inspection EMC Laboratory to determine the maximum emissions from the EUT. Shenzhen Academy of Metrology and Quality Inspection EMC Laboratory is assumed full responsibility for the accuracy of the test results. The test data, data evaluation, test procedures, and equipment configurations shown in this report were made in accordance with the procedures given in ANSI C63.10 (2013) and the energy emitted by the sample EUT tested as described in this report is in compliance with FCC Rules Part 15.407.

The test report is valid for above tested sample only and shall not be reproduced in part without written approval of the laboratory.

#### 2. GENERAL INFORMATION

### 2.1. Report information

This report is not a certificate of quality; it only applies to the sample of the specific product/equipment given at the time of its testing. The results are not used to indicate or imply that they are application to the similar items. In addition, such results must not be used to indicate or imply that SMQ approves recommends or endorses the manufacture, supplier or use of such product/equipment, or that SMQ in any way guarantees the later performance of the product/equipment.

The sample/s mentioned in this report is/are supplied by Applicant, SMQ therefore assumes no responsibility for the accuracy of information on the brand name, model number, origin of manufacture or any information supplied.

Additional copies of the report are available to the Applicant at an additional fee. No third part can obtain a copy of this report through SMQ, unless the applicant has authorized SMQ in writing to do so.

The lab will not be liable for any loss or damage resulting for false, inaccurate, inappropriate or incomplete product information provided by the applicant/manufacturer.

## 2.2. Laboratory Accreditation and Relationship to Customer

The testing report were performed by the Shenzhen Academy of Metrology and quality Inspection EMC Laboratory (Guangdong EMC compliance testing center), in their facilities located at NETC Building, No.4 Tongfa Rd., Xili, Nanshan, Shenzhen, China. At the time of testing, Laboratory is accredited by the following organizations:

China National Accreditation Service for Conformity Assessment (CNAS) accredits the Laboratory for conformance to FCC standards, EMC international standards and EN standards. The Registration Number is CNAS L0579.

The Laboratory is Accredited Testing Laboratory of FCC with Designation number CN1165 and Site registration number 582918.

The Laboratory is registered to perform emission tests with Innovation, Science and Economic Development (ISED), and the registration number is 11177A.

The Laboratory is registered to perform emission tests with VCCI, and the registration number are C-20048, G20076, R-20077, R-20078 and T-20047.

The Laboratory is Accredited Testing Laboratory of American Association for Laboratory Accreditation (A2LA) and certificate number is 3292.01.

Report No.:WT228000201 Page 5 of 19

#### 3. PRODUCT DESCRIPTION

NOTE: The extreme test conditions for temperature and antenna gain were declared by the manufacturer.

#### 3.1. EUT Description

Description : Mobile Computer

Manufacturer : Suzhou MobyData Smart System Co., Ltd.

Model Number : M52 Luna

Operate Frequency : U-NII 2A(5260~5320MHz)

U-NII 2C(5500~5700MHz)

Antenna Designation : PIFA Antenna: 1.5dBi

Operating voltage : DC3.6V (Low)/DC3.8V (Nominal)/DC4.35V (Max)

Software Version : M09.01.03.20220124

Hardware Version : H236WO\_V02

Remark: --

# 3.4. Operating Condition of EUT

The EUT utilizes the 802.11n architecture. Two nominal channel bandwidths are implemented: 20MHz, 40MHz.Only test the widest BW: 40MHz. The conducted power tables are as follows:

| Test<br>Mode   | Test<br>Channel | Power<br>[dBm] |
|----------------|-----------------|----------------|
| 802.11a        | 5260            | 12.09          |
| 802.11a        | 5280            | 12.16          |
| 802.11a        | 5320            | 12.44          |
| 802.11a        | 5500            | 11.43          |

## 5. TRANSMIT POWER CONTROL

## **5.1.LIMITS OF TRANSMIT POWER CONTROL**

CFR 47 (FCC) part 15.2407 (h)(1)

U-NII devices operating in the 5.25-5.35 GHz band and the 5.47-5.725 GHz band shall employ a TPC mechanism. The U-NII device is required to have the capability to operate at least 6 dB below the mean EIRP value of 30 dBm. A TPC mechanism is not required for systems with an e.i.r.p. of less than 500 mW.

| Additional requirements for devices with multiple | Master Device or Client with Radar Detection | Client Without Radar<br>Detection |
|---|--|-----------------------------------|
| bandwidth modes                                   |  |                                   |
| U-NII Detection Bandwidth                         | All BW modes must be tested                  | Not required                      |
| and Statistical                                   |  |                                   |
| Performance Check                                 |  |                                   |
| Channel Move Time and                             | Test using widest BW                         | Test using the widest             |
| Channel Closing                                   | mode available                               | BW mode available for             |
| Transmission Time                                 |  | the link                          |
| All other tests                                   | Any single BW mode                           | Not required                      |

**Note:** Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency.

Report No.:WT228000201 Page 12 of 19

Table 13 Interference Threshold values, Master or Client incorporating In-Service Monitoring

| Maximum Transmit Power                 | Value                   |
|--|-------------------------|
|  | (See Notes 1, 2, and 3) |
| EIRP ≥ 200 milliwatt                   | -64 dBm                 |
| EIRP < 200 milliwatt and               | -62 dBm                 |
| power spectral density < 10 dBm/MHz    |                         |
| EIRP < 200 milliwatt that do not meet  | -64 dBm                 |
| the power spectral density requirement |                         |

**Note 1:** This is the level at the input of the receiver assuming a 0 dBi receive antenna.

**Note 2:** Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

**Note3:** EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.

Table 14 DFS Response Requirement Values

| Parameter                         | Value   |
|-----------------------------------|---|
| Non-occupancy period              | Minimum 30 minutes  |
| Channel Availability Check Time   | 60 seconds  |
| Channel Move Time                 | 10 seconds  |
|                                   | See Note 1.   |
| Channel Closing Transmission Time | 200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period. See Notes 1 and 2 |
| U-NII Detection Bandwidth         | Minimum 100% of the U-NII 99% transmission power bandwidth. See Note 3.                               |

**Note 1:** Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.

**Note 2:** The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

**Note 3:** During the U-NII Detection Bandwidth detection test, radar type 0 should be used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

#### **6.2. TEST PROCEDURE**

The EUT Operates over the 5250-5350MHz and 5470-5725 MHz range and it is a Client Device without Radar Detection.

The radar detection threshold, lower antenna gain is the parameter of interfernce radar DFS detection threshold, the required conducted threshold at the antenna port is the -62dBm+0dBi+1dB=-61dBm.

The R&S SMBV100A vector signal generator with option K350 is used to generate the pulse during test.

The Client device is connected to the Master device on the Channel selected to test. The program iPerf is used to set up a connection between the Client and the Master Device with proper duty cycle.

The Spectrum analyzer is used to monitor the DFS radar pulse and the EUT transmission with zero span function at the selected Channel. The spectrum analyzer is set to peak detection, and max hold.

WLAN traffic load is verified before the pulse is injected.

#### Channel Move time

The test software controls the spectrum analyzer to start monitoring the EUT transmission, and at T0=2sec, the pulse is injected. The time the pulse stop is marked as T1, The time when no transmission is detected is marked as T3. T3-T1 is calculated as Channel move time.

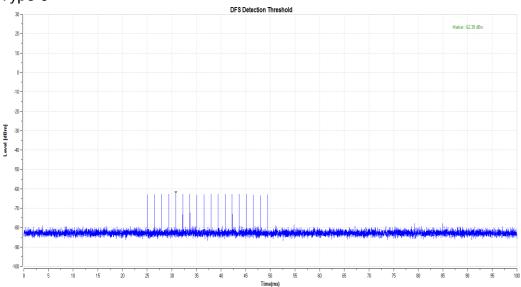

#### Non-Occupancy Period

The test software controls the spectrum analyzer to start monitoring the EUT transmission, and at T0=10sec, the pulse is injected. T2 is the channel move time stop moment, the software controls the spectrum to monitor for 1800 seconds. The plot is recorded in report.
