(Step 5) Strike Plate Installation Set

Keys

Exterior Assembly

Step 1.Prepare the Door

- 1.Remove the existing lock and check your door.
2. Check if your door has holes like the one below. Standard US doors are already compatible.

·If not, follow the template to drill holes on your door.

Step 2. Install Deadbolt

1. Check your door to see if the deadbolt requires adjustment.

2.Insert and screw the deadbolt into the doorframe

Step 3. Install Exterior Assembly

- Remove the spacer before installation if you have a 38 mm cross bore.

Step 4. Install Interior Assembly

1. Detach the back cover from the interior assembly.

2. Run the wires through the back cover.

3. Secure the back cover with screws.

Tightly fasten the screws in place. Set the screws with your hands, then use a screwdriver to secure them.

4. Wire to the interior assembly.

5. Mount the interior assembly. Make sure both wires are tucked into the cabinon the back of the interior assembly.

Make sure the deadbolt is retracted and the thumb turn knob is on the 'unlock' position, check if the deadbolt moves properly by turning the thumbturn.

6. Install the 4 AA batteries provided with the correct polarity. Don't put on the cover until the system setup is done in the app.

Step 5. Install Strike Plate

Make sure the depth of the latch hole on door frame is deep enough (25.4mm/1"), otherwise the calibration might be failed during the setup.

Built in door sensor

Find the door magnet with accessory package number 9 and install it onto the door frame. The installation location should be connected to the sensor of the door lock.

FAQ

Q:How do I perform the initial setup for the smart door lock?
