FCC ID: 2A3PB-552303

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *·[√f(GHz)] ≤ 3.0

The tune-up power is -12.5dBm +/- 0.5dB, therefore the highest tune-up power is -12.0 dBm (0.06 mW) @ 433.92 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

(0.06mW / 5mm) * (0.434GHz ^0.5)= 0.01

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [√f(GHz)] = 0.01 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.

Note:

1. The tune up power referred the field strength of fundamental signal of the test report (TMTN2111000581NR) for SAR test exclusion purpose.
