

# TEST REPORT

**Test Report No. : UL-RPT-RP-14099929-216-FCC**

**Applicant** : Krug & Priester GmbH & Co. KG  
**Model No.** : AP40 PRO (ID No. 10731001)  
**FCC ID** : 2A3QI-7310231  
**Technology** : RFID 13.56 MHz  
**Test Standard(s)** : FCC Parts 15.207, 15.209(a) & 15.225

For details of applied tests refer to test result summary

1. This test report shall not be reproduced in full or partial, without the written approval of UL International Germany GmbH.
2. The results in this report apply only to the sample tested.
3. The test results in this report are traceable to the national or international standards.
4. **Test Report Version 1.1 supersedes Version 1.0 with immediate effect**  
Test Report No. UL-RPT-RP-14099929-216-FCC Version 1.1, Issue Date 18 MAY 2022 replaces  
Test Report No. UL-RPT-RP-14099929-216-FCC Version 1.0, Issue Date 06 APRIL 2022, which is no longer valid.
5. Result of the tested sample: **PASS**

---

Prepared by: Sercan, Usta  
Title: Laboratory Engineer  
Date: 18 May 2022

---

Approved by: Ajit, Phadtare  
Title: Lead Test Engineer  
Date: 18 May 2022

Deutsche  
Akkreditierungsstelle  
D-PL-19381-02-00

This laboratory is accredited by DAkkS.  
The tests reported herein have been performed in  
accordance with its' terms of accreditation.

## 2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

### **3. Equipment Under Test (EUT)**

#### **3.1. Identification of Equipment Under Test (EUT)**

<b>Brand Name:</b>	IDEAL
<b>Model Name or Number:</b>	AP40 PRO
<b>Serial Number:</b>	1606089 (Radiated Test Sample)
<b>Hardware Version Number:</b>	13
<b>Firmware Version Number:</b>	149
<b>FCC ID:</b>	2A3QI-7310231

<b>Brand Name:</b>	IDEAL
<b>Model Name or Number:</b>	AP40 PRO
<b>Serial Number:</b>	1606089 (Radiated Test Sample with Terminated Antenna)
<b>Hardware Version Number:</b>	13
<b>Firmware Version Number:</b>	149
<b>FCC ID:</b>	2A3QI-7310231

<b>Brand Name:</b>	IDEAL
<b>Model Name or Number:</b>	8741099
<b>Serial Number:</b>	N/A
<b>Hardware Version Number:</b>	N/A
<b>Firmware Version Number:</b>	N/A
<b>Additional Details:</b>	Filter with Passive RFID 13.56 MHz Tag

#### **3.2. Description of EUT**

The equipment under test was a professional Air Purifier used to purify indoor air (for room sizes of 30 to 50 m<sup>2</sup>) supporting RFID 13.56 MHz technology & remote control communications over WiFi 2.4 GHz operations in 2.4 - 2.4835 GHz ISM band.

#### **3.3. Modifications Incorporated in the EUT**

The black lower section of the device was removed for the testing. The black section is a totally passive enclosure and contains no electrical components/ circuitry.

### **3.4. Additional Information Related to Testing**

<b>Tested Technology:</b>	RFID 13.56 MHz	
<b>Category of Equipment:</b>	Transceiver	
<b>Channel Spacing:</b>	Single channel device	
<b>Transmit Frequency Range:</b>	13.56 MHz	
<b>Power supply Requirement(s):</b>	120 V AC / 1.5 A / 60 Hz	
<b>Tested Temperature Range:</b>	Minimum	-20 °C
	Maximum	+50 °C

### **3.5. Support Equipment**

The following support equipment was used to exercise the EUT during testing:

#### **A. Support Equipment (In-house)**

No additional in-house support equipment were necessary to exercise the EUT during testing.

#### **B. Support Equipment (Manufacturer supplied)**

Item	Description	Brand Name	Model Name or Number	Serial Number
1	AC Power Cable (2m)	Xiongrun	9100628	N/A

## **4. Operation and Monitoring of the EUT during Testing**

### **4.1. Operating Modes**

The EUT was tested in the following operating mode(s):

- Continuous transmitting modulated carrier at maximum power in RFID-13.56 MHz test mode.

### **4.2. Configuration and Peripherals**

The EUT was tested in the following configuration(s):

#### **EUT Power supply:**

- The EUT was powered via 120 VAC power supply.

#### **Test Mode Activations:**

- For RFID 13.56 MHz test mode, the filter was placed on the EUT; which then detects the filter and activates the RFID communication.
- While doing tests WIFI 2.4 GHz was disabled.

#### **AC Conducted Measurements:**

- In accordance with FCC KDB 174176 Q5, the EUT's RFID 13.56 MHz output port was terminated 50 Ω termination (dummy load).
- As per applicant's declaration the EUT can only be operated with 120 VAC /60 Hz. Therefore, in accordance with FCC KDB 174176 Q4, tests were performed with all available U.S. voltages and frequencies (i.e. only with 120 VAC /60 Hz) for which the EUT is capable of operation.

#### **Radiated Measurements:**

- In accordance with ANSI C63.10 section 5.10.7, the EUT allows for the connection of external accessories, including external electrical control signals. Hence emission tests shall be performed with the EUT and accessories configured in a manner that tends to produce maximum emissions; therefore, all radiated tests were performed with EUT powered via AC/DC power adapter 120 VAC / 60 Hz.
- Before starting final radiated spurious emission measurements "worst case verification" with the EUT in Standing-position & Laying-position was performed by Lab.
- The EUT in Laying-position was found to be the worst case therefore this report includes relevant results.
- Radiated measurements below 30 MHz were performed with the EUT positioned on the turn table and rotating 360 degrees while the loop antenna height was set to 80 cm.
- Radiated measurements above 30 MHz were performed with the EUT positioned on the turn table and rotating 360 degrees while the antenna height varies from 1 to 4 m over the measurement frequency range.
- R&S®EMC32 Measurement Software V10.60.10 was used for the radiated spurious emission measurements.

## **5. Measurements, Examinations and Derived Results**

### **5.1. General Comments**

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to Section 6 *Measurement Uncertainty* for details.

In accordance with DAkkS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

## **5.2. Test Results**

### **5.2.1. Transmitter AC Conducted Spurious Emissions**

#### **Test Summary:**

<b>Test Engineer:</b>	Asim Shahzad	<b>Test Date:</b>	16 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample with Terminated Antenna)		
<b>Test Site Identification</b>	SR 7/8		

<b>FCC Reference:</b>	Part 15.207
<b>Test Method Used:</b>	ANSI C63.10 Section 6.2 / FCC KDB 174176 and notes below

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	23
<b>Relative Humidity (%):</b>	48

#### **Settings of the Instrument**

<b>Detector</b>	Quasi Peak/ Average Peak
-----------------	--------------------------

#### **Note(s):**

1. The EUT was plugged into a 120 VAC / 60 Hz single phase supply via a LISN.
2. As per applicant's declaration the EUT can only be operated with 120 VAC /60 Hz. Therefore, in accordance with FCC KDB 174176 Q4, tests were performed with all available U.S. voltages and frequencies (i.e. only with 120 VAC /60 Hz) for which the EUT is capable of operation.
3. In accordance with FCC KDB 174176 Q5, the EUT's RFID 13.56 MHz output port was terminated with 50 Ω termination (dummy load) in place of the antenna, which has the same electrical properties as the intended antenna without radiated emissions.
4. Pre-scans were performed, and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results entered into the tables below.
5. The final measured value, for the given emission, in the table below incorporates the cable loss.
6. All other emissions shown on the pre-scan plot were investigated. Only the highest 6 emissions have been reported in the tables below in accordance with ANSI C63.10 section 6.2.5.
7. Measurements were performed in shielded room (SR7/ 8 Asset Number 1603671). The EUT was placed at a height of 80 cm above the reference ground plane and in a distance of 40 cm from the vertical ground plane at the edge of the table.
8. Measurement software used: Toyo EMI Software; CE measurement software EP5/CE Ver 4.0.1.

**Transmitter AC Conducted Spurious Emissions (continued)****Test setup:**

**Transmitter AC Conducted Spurious Emissions (continued)****Results: Live / Quasi Peak / 120 VAC 60 Hz**

Frequency (MHz)	Line	Level (dB $\mu$ V)	Limit (dB $\mu$ V)	Margin (dB)	Result
0.16503	Live	33.7	65.2	31.5	Complied

**Result: Pass**

**Transmitter AC Conducted Spurious Emissions (continued)****Plot: Live and Neutral Line / 120 VAC 60 Hz**

*Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.*

### **5.2.2. Transmitter 20 dB Bandwidth**

#### **Test Summary:**

<b>Test Engineer:</b>	Sercan, Usta	<b>Test Dates:</b>	15 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 9		

<b>FCC Reference:</b>	Part 15.215(c)
<b>Test Method Used:</b>	ANSI C63.10 Section 6.9.2 deviations in accordance with FCC Inquiry

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	21.1
<b>Relative Humidity (%):</b>	43.2

#### **Settings of the Instrument:**

<b>RBW/VBW</b>	3 kHz / 10 kHz
<b>Span</b>	70 kHz
<b>Sweep time</b>	Auto
<b>Detector</b>	MaxPeak

#### **Notes:**

1. Following FCC Inquiry reasonable deviations to test method ANSI C63.10 Section 6.9.2 were made:  
Larger value of RBW (>1% to 5% of the OBW) than those mentioned in ANSI C63.10 Section 6.9.2.
2. The n dB down function of the spectrum analyzer was set to 20 dB.
3. The emission shown on 20 dB Bandwidth plots show the EUT's RFID 13.56 MHz fundamental for the tested channel.

#### **Test Setup:**

**Transmitter 20 dB Bandwidth (continued)****Results: AC Power Supply / RFID 13.56 MHz**

RFID Channel	20 dB Bandwidth (kHz)
13.56 MHz	17.830

**RFID 13.56 MHz****Result: Pass**

**5.2.3. Transmitter Fundamental Field Strength & Spectrum Mask****Test Summary:**

<b>Test Engineer:</b>	Sercan Usta	<b>Test Date:</b>	13 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

<b>FCC Reference:</b>	Part 15.225(a)(b)(c)(d)
<b>Test Method Used:</b>	ANSI C63.10 Section 6.4

**Environmental Conditions:**

<b>Temperature (°C):</b>	21.1
<b>Relative Humidity (%):</b>	43.2

**Note(s):**

1. The limit is specified at a test distance of 30 metres. However, as specified by FCC Section 15.31 (f)(2), measurements may be performed at a closer distance and the measured level corrected to the specified measurement distance by using the square of an inverse linear distance extrapolation factor (40 dB/decade).
2. In accordance with 414788 D01 Radiated Test Site v01 an alternative Test Site was used. Instead of an OATS a Semi Anechoic Chamber was used where evidence was shown that the behaviour is the same. A maximum deviation of 1.38 dB for 13.56 MHz could be determined. This deviation is also taken into account to the result.
3. Therefore, applicable limits were extrapolated from 30 m to 3 m using a distance extrapolation factor of 40 dB/decade. The transducer factor on the measuring instrument was used to extrapolate the measured values from 30 m to 3 m using a distance extrapolation factor of 40 dB/decade.
4. Pre-scan measurements were performed using a spectrum analyser with a peak detector and measurement bandwidth of 10 kHz. The fundamental field strength was maximized by rotating the measurement antenna and EUT. The spectrum analyser was then switched to test receiver mode and the final measurement on the maximized level was performed.
5. Compliance with the spectrum mask is shown by final measurements performed in a semi-anechoic chamber. For the field strength measurements in a semi-anechoic chamber, a transducer factor on the measuring instrument was used to extrapolate the results at 3 m to a distance of 30 m. A distance extrapolation factor of 40 dB was used.
6. A transducer factor was used on the spectrum analyser during measurement. This factor includes correction between the fixed gain of the magnetic loop antenna and the calibration values. It also includes the value of the RF cable used to connect the antenna to the spectrum analyser which was incorporated into the annual calibration of the magnetic loop antenna.
7. For the emissions appearing within the 13.110-14.010 MHz band, compliance with the spectrum mask is shown in accordance with FCC Part 15.225(a)(b)(c)(d) limits.
8. The emissions shown at frequencies approximately at 13.56 MHz on the plot represent EUT's fundamental field strength for RFID 13.56 MHz.
9. For the emissions appearing outside of the 13.110-14.010 MHz band, compliance with the spectrum mask is shown in accordance with FCC Part 15.225(d) referencing FCC Part 15.209 general radiated emission limits.

**Transmitter Fundamental Field Strength & Spectrum Mask (continued)**  
**Open Area Test Site**

**Semi Anechoic Chamber**

**Transmitter Fundamental Field Strength & Spectrum Mask (continued)****Results: AC Power supply / RFID 13.56 MHz**

Frequency Band (MHz)	Emission Frequency (MHz)	Loop Antenna Orientation	MaxPeak Emission Level at 3 m (dB $\mu$ V/m) Note 3	Deviation from OATS to SAC) (dB)	Deviation Corrected Level at 3 m (dB $\mu$ V/m)	Limit at 3 m (dB $\mu$ V/m) Note 3	Margin (dB)	Result
12.000 to 13.110	12.28	0° to EUT	35.59	1.79	37.38	69.50	32.12	Complied
13.110 to 13.410			All emissions were found to be below system noise floor					Complied
13.410 to 13.553			All emissions were found to be below system noise floor					Complied
13.553 to 13.567	13.56	0° to EUT	53.40	1.38	54.78	124.00	69.22	Complied

13.710 to 14.010			All emissions were found to be below system noise floor					Complied
14.010 to 15.000			All emissions were found to be below system noise floor					Complied

**Result: Pass**

**Transmitter Fundamental Field Strength & Spectrum Mask (continued)****Plot: AC Power supply / RFID 13.56 MHz**

Fundamental field strength and spectrum mask / measured at 3 metres in a semi-anechoic chamber

### **5.2.4. Transmitter Radiated Spurious Emissions**

#### **Test Summary:**

<b>Test Engineer:</b>	Sercan Usta	<b>Test Date:</b>	13 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

<b>FCC Reference:</b>	Parts 15.225(d) & 15.209(a)
<b>Test Method Used:</b>	ANSI C63.10:2013 Sections 6.3 and 6.4
<b>Frequency Range:</b>	9 kHz to 30 MHz

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	21.1
<b>Relative Humidity (%):</b>	43.2

#### **Note(s):**

1. In accordance with FCC KDB 414788, an alternative test site may be used for the measurement below 30 MHz (The OATS / SAC comparison data is available upon request). Therefore the result from the semi-anechoic chamber tests is shown in this section of the test report.
2. The limits are specified at a test distance of 30 m & 300 m. However, as specified by FCC Section 15.31 (f)(2), measurements may be performed at a closer distance and the measured level corrected to the specified measurement distance by using the square of an inverse linear distance extrapolation factor.
3. Therefore the limit values are extrapolated to a measurement distance of 3 m where field strength of X dB $\mu$ V/m was measured.
  - 9 kHz- 490 kHz: limits extrapolated from 300 m to 3 m adding 80 dB at 40 dB /decade.
  - 490 kHz-1705 kHz: limits extrapolated from 30 m to 3 m by adding 40 dB at 40 dB /decade.
4. All emissions shown on the pre-scan plots were investigated and found to be ambient or > 20 dB below the appropriate limit.
5. Measurements below 30 MHz were performed in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) at a distance of 3 m. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The measurement loop antenna height was 1 m.
6. Pre-scans were performed and markers placed on the highest measured levels. The test receiver was set to:
  - Frequency range: 9 kHz-150 kHz : RBW: 300 Hz /VBW: 1 kHz
  - Frequency range: 150 kHz – 30 MHz: RBW: 10 kHz /VBW: 30 kHz
  - Detector: Max-Peak detector
  - Trace Mode: Max Hold
7. The emissions shown at frequencies approximately 13.56 MHz on the 9 kHz to 30 MHz plots are the EUT RFID 13.56 MHz fundamental for the tested channel.

**Transmitter Radiated Spurious Emission test setup****Test Setup:**

**Transmitter Radiated Emissions (continued)****Results: AC Power supply / RFID 13.56 MHz**

Frequency (MHz)	Loop Antenna Orientation	Level (dB $\mu$ V/m)	Limit (dB $\mu$ V/m)	Margin (dB)	Result
No critical spurious emissions were found					

**Result: Pass**

**Transmitter Radiated Emissions (continued)****Test Summary:**

<b>Test Engineer:</b>	Sercan Usta	<b>Test Date:</b>	13 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

<b>FCC Reference:</b>	Parts 15.225(d) & 15.209(a)
<b>Test Method Used:</b>	ANSI C63.10:2013 Sections 6.3 and 6.5
<b>Frequency Range:</b>	30 MHz to 1000 MHz

**Environmental Conditions:**

<b>Temperature (°C):</b>	21.1
<b>Relative Humidity (%):</b>	43.2

**Note(s):**

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. All other emissions shown on the pre-scan plot were investigated and found to be below the measurement system noise floor.
3. Measurements below 1 GHz were performed in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) at a distance of 3 m. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 m to 4 m.
4. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.

**Test Setup:**

**Transmitter Radiated Emissions (continued)****Results: AC Power supply / RFID 13.56 MHz**

Frequency (MHz)	Antenna Polarization	MaxPeak Level (dB $\mu$ V/m)	Limit (dB $\mu$ V/m)	Margin (dB)	Result
363.00	Vertical	38.68	46.00	7.32	Complied

**Result: Pass**

**5.2.5. Transmitter Frequency Stability (Temperature & Voltage Variation)****Test Summary:**

<b>Test Engineer:</b>	Sercan Usta	<b>Test Dates:</b>	13 to 14 December 2021
<b>Test Sample Serial Number:</b>	1606089 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 9		

<b>FCC Reference:</b>	Part 15.225(e)
<b>Test Method Used:</b>	ANSI C63.10 Sections 6.8.1 and 6.8.2

**Environmental Conditions:**

<b>Ambient Temperature (°C):</b>	26 to 27
<b>Ambient Relative Humidity (%):</b>	30 to 32

**Settings of the Instrument**

<b>RBW/VBW</b>	30 Hz/30 kHz
<b>Span</b>	4 kHz
<b>Sweep Time</b>	Auto
<b>Sweep Mode</b>	Single Sweep
<b>Detector</b>	Peak
<b>Marker Function</b>	Signal Count

**Note(s):**

1. The EUT was kept inside the environmental/climatic test chamber. The tests were performed with extreme temperature & extreme voltage variations.
2. The temperature variations were monitored throughout the tests using a calibrated digital thermometer. The voltage variations were monitored throughout the tests using a calibrated digital multimeter.
3. For accurate measurement of frequency deviations, Signal Count / frequency counter function was activated on the spectrum analyser.
4. The applicant's declared operating frequency 13.560 MHz was used as reference frequency.
5. The difference between operating /reference frequency & measured frequency was reported as a frequency error.
6. The frequency tolerance of the carrier signal shall be maintained within  $\pm 0.01\%$  or 100 ppm of the operating frequency
7. As the EUT was powered with nominal AC voltage of 120 VAC /60 Hz; the frequency stability measurements when varying supply voltage were performed with following supply voltages:
  - with nominal AC voltage (120 VAC /60 Hz)
  - 85% of the nominal supply AC voltage (102 VAC /60 Hz)
  - 115% of the nominal supply AC voltage (138 VAC /60 Hz)

**Transmitter Frequency Stability (Temperature & Voltage Variation) (continued)****Test Setup : Frequency Stability Tests -Temperature & Voltage Variations**

**Transmitter Frequency Stability (Temperature & Voltage Variation) (continued)****Results: AC Power supply / RFID 13.56 MHz / Temperature Variations**

## **6. Measurement Uncertainty**

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	95%	±2.49 dB
20 dB Bandwidth	95%	±0.87 %
Fundamental Field Strength	95%	±3.10 dB
Radiated Spurious Emissions	95%	±3.10 dB
Frequency Stability	95%	±92 Hz

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

## 8. Open-Area-Test Site comparison

### GPS coordinates

Latitude: 48.765746, Longitude: 9.250684

### Open-Area-Test Site comparison (continued)

The following listed equipment was used for the measurement:

Manufacturer	Type	Model	Frequency Range
Rohde & Schwarz	Signal generator	SML03	9 kHz – 30 MHz
Rohde & Schwarz	Receiver, EMI Test	ESIB7	20 Hz – 7 GHz
Rohde & Schwarz	Antenna, Loop	HFH2-Z2	1 kHz – 30 MHz
ETS LINDGREN	Antenna, Loop	6512	1 kHz – 30 MHz
HUBER+SUHNER	RF Cable	-/-	-/-
Elspec	BNC Cable	-/-	-/-

The transmit signal to the ETS Lindgren loop antenna is supplied by the SML signal generator.

The distance of the transmit and receive antenna was 3 m. No other distances can be achieved in SR1 so 10 m and 30 m distances are not possible. Due to this no comparison is possible.

The Results are valid for equipment which is not larger as the loop antenna which represents in the comparison the EUT.

If an EUT is bigger measurements on an OATS are needed.

The measurement was performed on the lowest frequency 9 kHz and was increased by 10 kHz Steps up to 100 kHz. Then the step size was 100 kHz up to 1000 kHz. From 1 MHz up to the last frequency of 30 MHz the step size was 1 MHz. The HFH2-Z2 loop antenna placed at 80 cm height was used as the receive antenna. The intercepted RF signal from this antenna was measured with the ESIB7 Test Receiver and the values were recorded accordingly.
