Columbia, MD 21046

To whom it may concern:

Heads Up Goggles LLC, hereby requests a Permissive Change Class II of the radio equipment certification for , FCC ID: 2A4BT-SK01. This product differs from the originally approved product in the following manor:

- (a) Associated digital circuitry. We place the SK01 module on a custom 40mm by 50mm PCB. Our PCB has no impact on the maximum output power of the radio. We made no changes to the RF Circuit or Chassis.
- (b) Functional capabilities. There are no changes to the functional capabilities of the SK01 module.
- (c) Antenna Characteristics. Adding antenna: FPC flexible 915mhz dipole antenna.
- (d) Cosmetic differences. There are no cosmetic changes to the SK01 module.
- (e) Collocation. We place the SK01 module on our custom PCB along with an ESPWROOM32D chip that uses Bluetooth low energy. The ESPWROOM32D chip has FCC ID: 2AC7Z-ESPWROOM32D. We have performed SAR collocation testing and that data is included in another part of this application

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

*Fletcher Pease*
