

Fast tutorial

1. Charge your watch until RED LED OFF(V1) or 4 GREEN LEDs are all ON(V2,V3,V4).
 2. SELECT-> APs->* Your target(Select only one target.).
 3. Back x2 -> ATTACK->* DEAUTH-> START (RGB LED turn RED)
 4. STOP (RGB LED turn GREEN).
 5. Connect wifi to pwned.(Password: deauther)
 6. Use Chrome browser to open 192.168.4.1
 7. Select AP target or Station target
 8. Attack -> Deauth start.(Select only one attack method one time).
- Attention : You can change settings via chrome browser. But if you select multiple targets to attack at the second step, you may not find pwned to connect.

Scan this to solve more problems about deauther.
(How to Reset/I forgot the password)

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
 - (2) this device must accept any interference received, including interference that may cause undesired operation.
- This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
