

Difference Declaration

Original Model No.: ASR100

ASR100-XXX-XX (X = A-Z or a-z or 0-9)

XXX---indicating the installation location and system configuration

XX-----internal customer code

Adding Model No. :

例: ASR100-LID-AT

L-----installed on the left side of the vehicle

ID-----installed in ID system

AT-----customer coded as AT in Autel Intelligent Automobiles

To whom it may concern,

We, Autel Intelligent Automobile Corp., Ltd. would like to declare those models ASR100 and ASR100-XXX-XX are identical in PCBA, Drivers, and Enclosure .The only difference are Installation position and Software version.

Software related:

Current Software Version: ASR100_TA_app_v1.1.0

Software Version Changes: We will change the last letter and number

There are two situations where we need to iterate on software releases.

First: In order to improve the stability of radar performance, we will carry out version iteration, such as ASR100_TA_app_v1.2.0

Second: After adjusting the early warning strategy according to the needs of customers, we will also carry out software version iteration in order to differentiate versions, such as ASR100_TA_huh_v1.1.0

The software change is generally to update the early warning strategy according to the customer's needs, and do not reconfigure the RF parameters.

.

Sincerely yours,
