## TEST REPORT

**Applicant:** Xiamen Dlight Star Technology Co.,Ltd.

**Address:** NO.358 Jiqun Road Tong'an Industry District, Xiamen, Fujian,  
361100, China

**FCC ID:** 2A5R3-DD0411

**Product Name:** charging base

**Model Number:** DD0411

**Standard(s):** 47 CFR Part 1.1310  
47 CFR Part 2.1091  
KDB 680106 D01 RF Exposure Wireless Charging  
Apps v03r01

The above equipment has been tested and found compliance with the requirement of the relative standards by China Certification ICT Co., Ltd (Dongguan)

**Report Number:** CR22040009-00

**Date Of Issue:** 2022-05-21

**Reviewed By:** Sun Zhong

*Sun Zhong*

**Title:** Manager

**Test Laboratory:** China Certification ICT Co., Ltd (Dongguan)  
No. 113, Pingkang Road, Dalang Town, Dongguan,  
Guangdong, China  
Tel: +86-769-82016888

## Test Facility

The Test site used by China Certification ICT Co., Ltd (Dongguan) to collect test data is located on the No. 113, Pingkang Road, Dalang Town, Dongguan, Guangdong, China.

The lab has been recognized as the FCC accredited lab under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No. : 442868, the FCC Designation No. : CN1314.

The lab has been recognized by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements, the CAB identifier: CN0123.

## Declarations

China Certification ICT Co., Ltd (Dongguan) is not responsible for the authenticity of any test data provided by the applicant. Data included from the applicant that may affect test results are marked with a triangle symbol “▲”. Customer model name, addresses, names, trademarks etc. are not considered data.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested.

This report cannot be reproduced except in full, without prior written approval of the Company.

This report is valid only with a valid digital signature. The digital signature may be available only under the Adobe software above version 7.0.

This report may contain data that are not covered by the accreditation scope and shall be marked with an asterisk “★”.

## 1. GENERAL INFORMATION

### 1.1 Product Description for Equipment under Test (EUT)

|                             |                    |
|-----------------------------|--------------------|
| <b>EUT Name:</b>            | charging base      |
| <b>EUT Model:</b>           | DD0411             |
| <b>Operation Frequency:</b> | 110-205 kHz        |
| <b>Rated Input Voltage:</b> | DC 5V from adapter |
| <b>Serial Number:</b>       | CR22040009-RF-S1   |
| <b>EUT Received Date:</b>   | 2022.04.08         |
| <b>EUT Received Status:</b> | Good               |

### Antenna Information Detail▲:

| Antenna Manufacturer   | Antenna Type | input impedance (Ohm) | Antenna Gain /Frequency Range | §15.203 Requirement |
|--|--------------|-----------------------|-------------------------------|---------------------|
| Xiamen Dlight Star Technology Co.,Ltd.   | Coil         | 50                    | 0dBi / Unknown                | Compliance          |
| The Method of §15.203 Compliance:<br><input checked="" type="checkbox"/> Antenna must be permanently attached to the unit.<br><input type="checkbox"/> Antenna must use a unique type of connector to attach to the EUT.<br><input type="checkbox"/> Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit. |              |                       |                               |                     |

### Accessory Information:

No Accessory.

## 1.2 Description of Test Configuration

### 1.2.1 EUT Operation Condition:

|   |  |
|---|--|
| <b>EUT Operation Mode:</b>  | The system was configured for testing in Engineering Mode, which was provided by the manufacturer. |
| <b>Equipment Modifications:</b>   | No   |
| <b>EUT Exercise Software:</b>   | No   |
| Engineering Mode was provided by manufacturer▲. The maximum power was configured default setting. |  |

### 1.2.2 Support Equipment List and Details

| Manufacturer                              | Description | Model                   | Serial Number   |
|---|-------------|-------------------------|-----------------|
| Ktec                                      | Adapter     | KSAS0121200100D5NS<br>K | E215890         |
| Xiamen Dlight Star<br>Technology Co.,Ltd. | Light       | DZ0111                  | CR2204009-RF-S2 |

### 1.2.3 Support Cable List and Details

| Cable Description | Shielding<br>Type | Ferrite Core | Length<br>(m) | From Port | To      |
|-------------------|-------------------|--------------|---------------|-----------|---------|
| USB Cable         | No                | No           | 1.2           | EUT       | Adapter |

## 1.3 Measurement Uncertainty

Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty. The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor K with the 95% confidence interval.

| Parameter   | Measurement Uncertainty |
|-------------|-------------------------|
| E-Field     | 1.30dB                  |
| H-Field     | 1.30dB                  |
| Temperature | ±1°C                    |
| Humidity    | ±5%                     |

## 2. SUMMARY OF TEST RESULTS

| Rules                 | Description of Test       | Results    |
|-----------------------|---------------------------|------------|
| FCC §1.1310 & §2.1091 | Maximum Permissible (MPE) | Compliance |

### 3. MAXIMUM PERMISSIBLE EXPOSURE (MPE)

#### 3.1 Applicable Standard

According to subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |                               |                               |                                     |                          |
|---|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| Frequency Range (MHz)                                   | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Averaging Time (minutes) |
| 0.3–1.34  | 614                           | 1.63                          | *(100)                              | 30                       |
| 1.34–30   | 824/f                         | 2.19/f                        | *(180/f <sup>2</sup> )              | 30                       |
| 30–300  | 27.5                          | 0.073                         | 0.2                                 | 30                       |
| 300–1500  | /                             | /                             | f/1500                              | 30                       |
| 1500–100,000  | /                             | /                             | 1.0                                 | 30                       |

f = frequency in MHz; \* = Plane-wave equivalent power density;

According with KDB 680106 D01 RF Exposure Wireless Charging Apps v03r01 clause 3 c)

- c) For devices designed for typical desktop applications, such as wireless charging pads, RF exposure evaluation should be conducted assuming a user separation distance of 15 cm. E and H field strength measurements or numerical modeling may be used to demonstrate compliance. Measurements should be made from all sides and the top of the primary/client pair, with the 15 cm measured from the center of the probe(s) to the edge of the device. Emissions between 100 kHz to 300 kHz should be assessed versus the limits at 300 kHz in Table 1 of Section 1.1310: 614 V/m and 1.63 A/m. A KDB inquiry is required to determine the applicable exposure limits below 100 kHz.

According to 680106 D01 RF Exposure Wireless Charging App v03r01 clause 5 b)

- b) Inductive wireless power transfer applications with supporting field strength results and meeting all of the following requirements are not required to submit a KDB inquiry for devices approved using SDoC<sup>2</sup> or a PAG<sup>3</sup> for equipment approved using certification to address RF exposure compliance. However, the responsible party is required to keep a copy of the test report in accordance with KDB 865664 D02. A copy of the test report is to be submitted with the application if the device is approved using certification.
- (1) Power transfer frequency is less than 1 MHz
  - (2) Output power from each primary coil is less than or equal to 15 watts.
  - (3) The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.
  - (4) Client device is placed directly in contact with the transmitter.
  - (5) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).
  - (6) The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit.

Note: Test with 15cm distance from the center of the probe(s) to the edge of the device, 20 cm for top test.

Result: Compliance

**Considerations of compliance 680106 D01 RF Exposure Wireless Charging App v03r01 clause 5 b:**

**(1)** Power transfer frequency is less than 1 MHz

Yes, the operation frequency is 110-205 kHz.

**(2)** Output power from each primary coil is less than or equal to 15 watts.

Yes, the maximum output power of primary coil is **5 Watts**.

**(3)** The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.

The transfer system includes only single primary coil, and system detect and allow coupling only between individual pairs of coils.

**(4)** Client device is placed directly in contact with the transmitter.

Yes, client device is placed directly in contact with the transmitter

**(5)** Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).

Yes, mobile exposure conditions only.

**(6)** The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit.

Yes, the test result for H and E-field strength less than 50% of the MPE limit.

**\*\*\*\*\* END OF REPORT \*\*\*\*\***
