1、**Confidentiality requirements** : Shenzhen Maya Communication Equipment Co., Ltd. already owns the proprietary technology of this product and is not allowed to disclose it to any company or

Shenzhen Maya Communication

Equipment Co., Ltd.

individual without the written consent of Shenzhen Maya Communication Equipment Co., Ltd.

2. Special reminder : Before signing this document, all parties must carefully read the "Special Terms" and the contents of the catalog. After the representatives of both parties sign, it is deemed that they have reached an agreement on the contents of this document and have no objection, and both parties are willing to abide by it together.

Special Terms

1. About performance and structure confirmation

★Please confirm the appearance and performance of the product before signing the confirmation letter.

★Please provide the final trial production machine to us or bring it back to us for verification before mass production.

★Since the product in this acknowledgment is a highly sensitive object, please be sure to keep the test gold machine for subsequent tracing.

★Since this product is a customized item and has a highly targeted use, when customers replace materials or use it for non-specified projects, please be sure to send the changed materials or machines for non-specified projects back to our company to verify the RF performance. Otherwise, it may cause serious hidden dangers that the usage status is inconsistent with the design status. We will perform functional confirmation on our sealed and debugged prototypes to ensure that our debugged samples are fully functional and prevent antenna performance errors caused by abnormal functions.

2. About product storage issues

★Due to the printing ink on the surface of this product, the adhesive on the back and the electroplated objects, please make sure that the temperature is between 23°C -27°C, the relative humidity is below 60% during storage or transportation, and it is stored or transported in an environment without strong acid, sulfur or oxygen.

★Since the adhesive backing of this product has strict requirements on the environment, please be sure to assemble the product within the optimal use period after receiving it to ensure the reliability of the product.

3. Product Usage Agreement

★Due to the special structure of this product, please make sure to fully contact with the object to be adhered when using this product, and there must be no residual chemical agents (release agents, etc.) on the object to be adhered, or try not to use raw materials with release agents. To ensure the product's usable condition, please clean the surface of the object to be adhered before using this product to ensure that there is no chemical residue on the surface of the object to be adhered.

4. Quality statement of this product

★ Due to the influence of the above-mentioned factors, the optimal usage period

Shenzhen Maya Communication

Equipment Co., Ltd.

of this product is recommended to be within 1 to 2 months . Exceeding the period will affect the product's use effect. Our company provides lifelong consulting and paid replacement services for this product.

★This product is a special customized device. Please be sure to inspect the product appearance, quantity, performance, etc. within 7 days after receiving the product in accordance with the agreed standards of this "Product Performance and Specification Acknowledgement". If you fail to do so within the deadline, the quality of this product will be deemed to meet the agreed standards of both parties.

★Verification method: Compare with the project seal sample of the letter of acknowledgment.

3. Electrical properties

3.1 Test method description and data

Device Name	use
Vector Network Analyzer	S11/Impedance/ Passive Test
Agilent 8960 SP6010 R&S CMU200	Mobile communication equipment testing including GSM, GPRS, EDGE, CDMA2000, 1xEV-DO, TD-SCDMA, WCDMA, HSDPA
R&S CMW500 MT8820C	Including TD-SCDMA, WCDMA, Mobile communication equipment testing for HSDPA, LTE, WIFI, and GPS
SP9500E	Including 5G, SA, NSA
Agilent E4438C	Testing Active GPS
MVG Chamber	Passive Test / OTA active Test / Efficiency/Gain

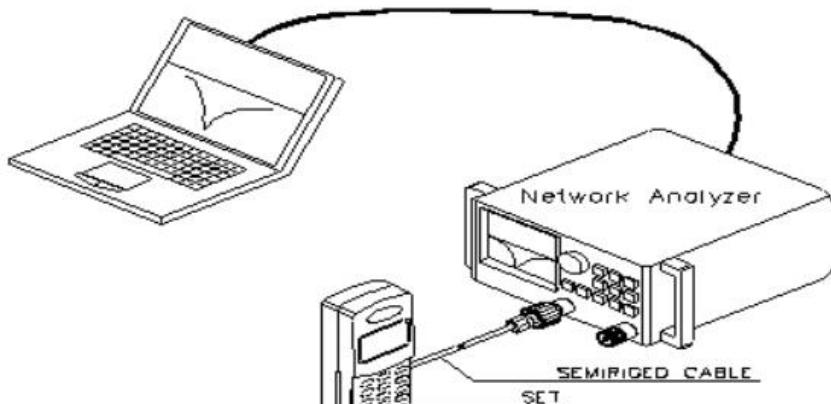

3.2 Passive Test Report

Test equipment: Network analyzer

Test method: Use a 50 -ohm CABLE cable to export from the instrument test port, calibrate it with a calibration piece, and then connect it to the SMA connector of the mobile phone tool . Record the return loss or standing wave ratio data corresponding to the relevant frequency points.

3.3 Active Test Report

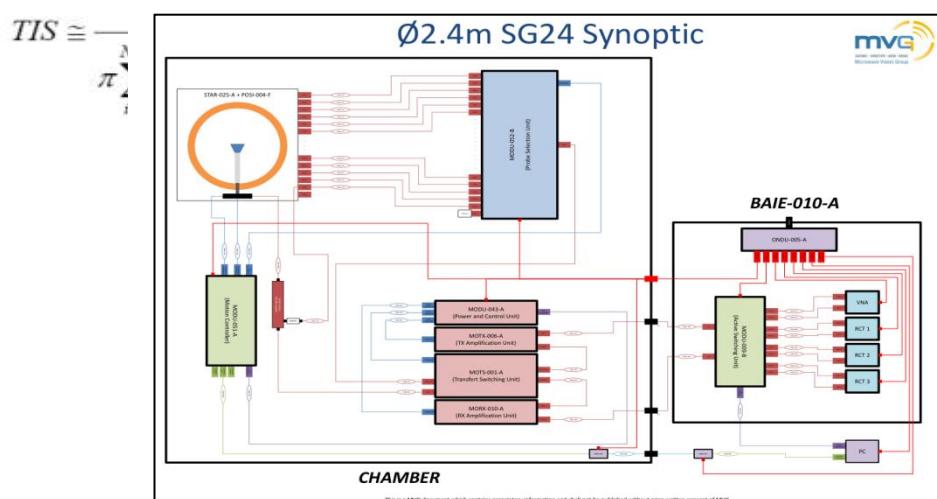

TRP/TIS

Test tools: comprehensive tester, network analyzer, full radio wave far-field ETS , French MVG SG24LT (Satmio) near-field 3D microwave darkroom, high-precision positioning system and its controller and computer with automatic test program Test environment : temperature $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$, humidity $60\% \pm 15\%$

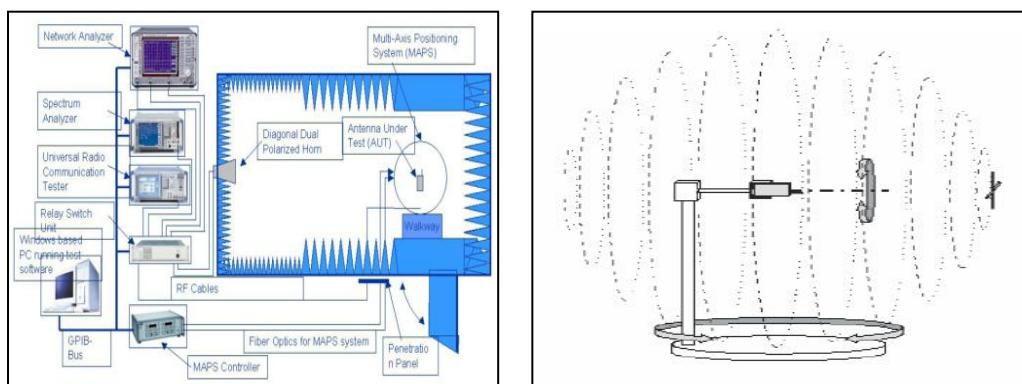

Test method: Use EST or Satimo 24LT system software TRP test method and calculation When conducting TRP test, DUT (Device Under Test) is in the maximum transmission power state, select high, medium and low channels for testing, and control the position of DUT through the positioning system . In steps of 15 degrees, Measure the effective radiated power (EIRP) of each point in three-dimensional space , and calculate the average value on the sphere by integration. The calculation formula is as follows:

$$TRP \approx \frac{\pi}{2NM} \sum_{i=1}^{N-1} \sum_{j=0}^{M-1} [EiRP_{\theta}(\theta_i, \phi_j) + EiRP(\theta_i, \phi_j)] \sin(\theta_i)$$

performing TIS testing, the DUT is in the maximum transmit power state. Select three channels, high, medium and low, for testing. By controlling the position of the DUT , With a step length of 30 degrees, Measure the receiving sensitivity of each point in three-dimensional space, The average value on the sphere is calculated by integration, and the calculation formula is as follows:
