Govee | Quick Start Guide

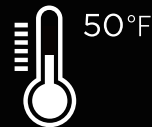

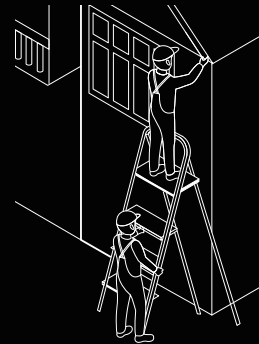

Govee Permanent Outdoor Lights

Installation Steps:

- ① Before installation, connect each string light and plug it into power to make sure every string light can work properly. Then disassemble the string lights.

- ② When installing this light during winter, it is advisable to install it within the warmer midday period. Applying heat to the adhesive backing with a hot water bottle or a hair dryer will help improve its adhesiveness in cold conditions.

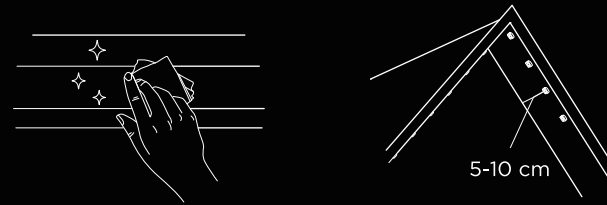

- ③ Prepare a stable ladder. And locate the power supply and where you wish to install the first string light. Connect the first string light to the control box without connecting the power adapter to ensure the control box cable is sufficiently long.

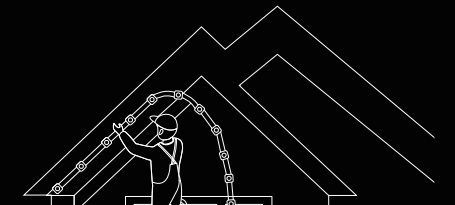

210 mm

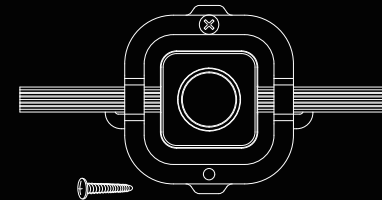

- ④ Clean the surface where you plan to install the string lights. It is recommended to vertically install the string lights 5-10 cm away from the wall surface. Make sure the surface is clean and dry.

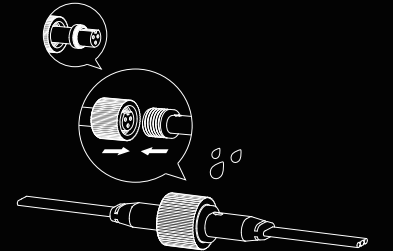

- ⑤ Tear off the VHB tape and firmly press it against the surface for more than 5 seconds. Due to the length of the light string, please press down on the previous light once more during installation.

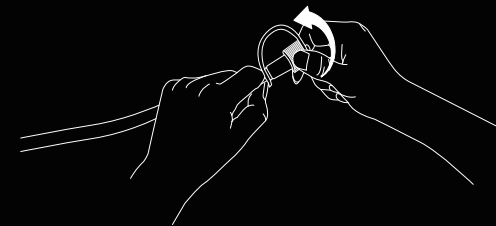

- ⑥ To make sure the string lights are firmly fixed on the eaves, it is recommended to use clips to keep the string lights secure.

- ⑦ Connect two string lights via the waterproof connectors. Firmly screw the waterproof connector cap. Repeat steps 5, 6, and 7.

- ⑧ After connecting all string lights, firmly screw the waterproof connector cap of the last string light section.

- ⑨ Plug into power and enjoy your lighting effects.
