

# Letter of Declaration

## Product Equality

November 07, 2022

We, as a manufacturer, hereby declare that our product has variant model names as listed below. Variant model is totally same as basic model but it differs in the authentication method that opens the door. Each model differences are described in the below table.

Classification	Specification
Product Name	LASER MARKING MACHINE
Model Name	F220
Basic Model Name	F230
Model Differences	<p>- IZI-CODE F220/F230 is assembled with a controller and a marking head. Both of these models are built with the same hardware components such as the scanner, control board, interface board, power supply, and cooling system. Therefore, the dimension of controller and marking head are identical. However, each model uses a different type of laser source.</p> <p>- IZI-CODE F220 laser source has 20W or slightly more average output power and a full-power frequency range of 25~600 kHz. Moreover, the power consumption is less than 110 W, and the power supply current requirements are more than 5 A. The net weight is about 3.75 Kg.</p> <p>- IZI-CODE F230 laser source has 30W or slightly more average output power and a full-power frequency range of 37~600 kHz. Moreover, the power consumption is less than 150 W, and the power supply current requirements are more than 7 A. The net weight is about 4.25 Kg.</p> <p>* The description above specifies the difference of each models(F220 and F230) laser source. Other specification details including the dimension of the laser source are the same.</p>

Sincerely yours,
