Declaration

The company's product models are 61003, 62003, 63003, 61004, 62004 and 63004. The ESP32 chip has two RF functions, Bluetooth and wifi, mainly using Bluetooth mesh networking control technology. Wifi function can transmit the color sensor data to the mobile phone in the factory test to analyze whether the color data is normal.   After the factory, the software of wifi function is closed, and the final customer cannot use the wifi function.
