8.8 Frequency stability

8.8.1 References, definitions and limits

FCC §25.202:

- (d) Frequency tolerance, Earth stations. The carrier frequency of each earth station transmitter authorized in these services shall be maintained within 0.001 percent of the reference frequency.

RSS-170, Clause 5.3:

For mobile earth station equipment, the carrier frequency shall not depart from the reference frequency by more than ± 10 ppm.

For ATC equipment operating in the bands 2000-2020 MHz and 2180-2200 MHz, the frequency stability shall be sufficient to ensure that the emission bandwidth stays within the operating frequency block when tested to the temperature and supply voltage variations specified in RSS-Gen.

For ATC equipment operating in frequency bands other than the bands 2000-2020 MHz and 2180-2200 MHz, the carrier frequency shall not depart from the reference frequency in excess of ± 2.5 ppm for mobile equipment, and ± 1.5 ppm for base station equipment.

8.8.2 Test summary

Verdict	Pass		
Tested by	P. Barbieri	Test date	June 13, 2024

8.8.3 Observations, settings and special notes

Test was performed on supply voltage variations as per client rated, no frequency deviation was observed.

8.8.4 Test equipment used

Equipment	Manufacturer	Model no.	Asset no.
EMI Receiver	Rohde & Schwarz	ESU8	100202
Climatic chamber	espec	ARS-1100	4100000067

8.8.5 Test data

Table 8.8-1: Transmitter frequency stability results

Test conditions	Frequency, Hz	Drift, Hz	Drift, ppm	Limit $\pm$ ppm	Margin, $\pm$ ppm
+50 °C, Nominal	2014996419	158	0.08	1	-0.92
+40 °C, Nominal	2014996455	122	0.06	1	-0.96
