

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On a wooden workbench, there is a spectrum analyzer with a green probe connected to it. A power supply unit is on the floor, connected to the workbench. A tablet with a color calibration chart is on the right side of the workbench.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A white test chamber is placed on a metal floor. A metal frame is in the foreground. The walls are covered with white and blue electromagnetic interference (EMI) shielding.

Radiation Emission Test Setup (30MHz to1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. The test chamber is lined with white, square-shaped anechoic absorbers. A white, rectangular test fixture is mounted on a black, circular turntable. The turntable is positioned on a green and white striped safety mat. To the right, a metal safety railing is visible.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. The test chamber is lined with white, square-shaped anechoic absorbers. A white, rectangular test fixture is mounted on a black, rectangular base. A red, curved, horn-shaped antenna is positioned in the foreground, pointing towards the test fixture. The floor is marked with yellow lines.

**Radiation Emission
Test Setup (Above18GHz)**
