# TEST REPORT

**Test Report No.: UL-RPT-RP-14140770-2916-FCC**

**Applicant \*** : Maquet GmbH  
**Model No. \*** : 1009.25B0  
**FCC ID \*** : Contains FCC ID: 2A98NNINAW106  
**Technology \*** : WLAN 2.4 GHz (802.11 b, g, n)  
**Test Standard(s)** : **FCC Parts 15.209(a) & 15.247**

For details of applied tests refer to test result summary

1. This test report shall not be reproduced in full or partial, without the written approval of UL International Germany GmbH.
2. The results in this report apply only to the sample tested.
3. The test results in this report are traceable to the national or international standards.
4. **Test Report Version 1.3 supersede Version 1.2 with immediate effect**  
Test Report No. UL-RPT-RP-14140770-2916-FCC Version 1.3, Issue Date 06 JUNE 2024 replaces  
Test Report No. UL-RPT-RP-14140770-2916-FCC Version 1.2, Issue Date 03 JUNE 2024, which is no longer valid.
5. Result of the tested sample: **PASS**
6. All information marked with a (\*) were provided by customer / applicant or authorized representative

Prepared by: Muhammad Faiq, Khan  
Title: Project Engineer  
Date: 06 June 2024

Approved by: Rachid, Acharkaoui  
Title: Operations Manager  
Date: 06 June 2024

C: COMPLIED   N.C.: NOT COMPLIED   N.P.: NOT PERFORMED   N.A.: NOT APPLICABLE					
<b>Decision rule:</b> Where not otherwise specified or communicated in writing, statements of conformity (e.g. Pass/Fail) are established according to the following decision rule: considering the ILAC G8:2019 chapter 4.2.1 (simple acceptance rule). This leads to a maximum 50% of false accept or false reject when the measured value equals the tolerance limit. See ILAC-G8:09/2019 for further details.					

### Note(s):

1. The EUT is a battery powered device therefore, no AC conducted emissions were performed.
2. According to applicant's declaration a Pre-certified Radio module was integrated (Model: NINA-W156, FCC ID: 2A98NNINAW106). Therefore, only partial testing has been performed.
3. The Spurious emission measurements were performed Radiated and therefore conducted emissions were not required.

## 2.3. Methods and Procedures

Reference:	ANSI C63.10-2013
Title:	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
Reference:	FCC KDB 558074 D01 DTS Meas Guidance v05r02 April 2, 2019
Title:	Guidance for compliance measurements on Digital Transmission System, Frequency Hopping Spread Spectrum System, and Hybrid System Devices Operating Under Section 15.247 of the FCC rules
Title:	FCC KDB 996369 D04 Module Integration Guide v02 October 13, 2020
Reference:	Modular Transmitter Integration Guide Guidance for Host Product Manufacturers

## 2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

### **3. Equipment Under Test (EUT)**

#### **3.1. Identification of Equipment Under Test (EUT) \***

<b>Brand Name:</b>	Universal Remote Control (URC) 1009.25B0
<b>Model Name or Number:</b>	Universal Remote Control (URC) 1009.25B0
<b>Test Sample Serial Number:</b>	00001 (Radiated Test Sample)
<b>Hardware Version Number:</b>	0980 0464 01
<b>Firmware Version Number:</b>	URC_EMVTEST_0_99_17
<b>FCC ID:</b>	2A98NNINAW106

#### **3.2. Description of EUT \***

The equipment under test was an Operating table Remote Control supporting WLAN 2.4 GHz operations in 2400 2483.5 MHz ISM band.

#### **3.3. Modifications Incorporated in the EUT**

No modifications were applied to the EUT during testing.

**3.4. Additional Information Related to Testing \***

Category of Equipment:	WLAN 2.4 GHz (IEEE 802.11b, g, n)		
Type of Radio Device:	Transceiver		
FCC Equipment Classification:	Digital Transmission System (DTS)		
Power Supply Requirement(s):	Internal Battery powered: 3.6V DC		
Supported Transmit Operating Mode(s):	802.11b/g HT20 802.11n HT20 / HT40		
Tested Data Rate(s):	802.11b	1 Mbps (Note 1) (Note 2)	
	802.11g	6 Mbps (Note 1)	
	802.11n HT20	MCS0 (Note 1)	
Nominal Channel Bandwidth:	20 MHz 40 MHz		
Highest internally generated clock and/ or oscillator frequency:	220 MHz		
Transmit Frequency Range:	2412 MHz to 2462 MHz		
Transmit Channels Tested:	Channel ID	RF Channel	Frequency(MHz)
Nominal Channel Bandwidth: 20 MHz	Bottom	1 (Note 1)	2412
	Middle	6	2437
	Top	11	2462
(Note 1) According to applicant's declaration a Pre-certified Radio module was integrated (Model: NINA-W156, FCC ID: 2A98NNINAW106 Therefore, only partial testing has been performed only on the worst-case modulation, data rate and channel.			
(Note 2) In accordance with FCC KDB 996369 D04 Section 3.4 (b) Host Product testing has been performed on unwanted (spurious) radiated emissions on the worst-case modulation and channel per frequency.			

**3.5. Support Equipment**

The following support equipment was used to exercise the EUT during testing:

**A. Support Equipment (In-house)**

Item	Description	Brand Name	Model Name or Number	Serial Number
1	Test Laptop with Test software: Putty	HP	ProBook 650	5CG6143YWB

**B. Support Equipment (Manufacturer supplied)**

Item	Description	Brand Name	Model Name or Number	Serial Number
1	-/-	-/-	-/-	-/-

## 4. Operation and Monitoring of the EUT during Testing

### 4.1. Operating Modes

The EUT was tested in the following operating mode(s):
<input checked="" type="checkbox"/> Transmitter / Modulated Carrier Continuous Transmissions Mode WLAN 2.4 GHz, Worst Case: <ul style="list-style-type: none"> <li>802.11b   20 MHz   1 Mbps   PWR MAX <sup>(Note 1)</sup> <sup>(Note 2)</sup></li> <li>802.11g   20 MHz   6 Mbps   PWR MAX <sup>(Note 2)</sup></li> <li>802.11n   20 MHz   MCS0   PWR MAX <sup>(Note 2)</sup></li> </ul>
<sup>(Note 1)</sup> According to applicant's declaration a Pre-certified Radio module was integrated (Model: NINA-W156, FCC ID: 2A98NNINAW106). Therefore, only partial testing has been performed only on the worst-case modulation, data rate and channel.
<sup>(Note 2)</sup> Used for band edge measurements.

### 4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

#### **EUT Power Supply:**

- The EUT was powered with Internal Battery (3.6V).

#### **Test Mode Activation:**

- The applicant or manufacturer supplied test setup instruction 'Setup Instructions Radio Test Remote.pdf' was used to configure the EUT into respective test modes.
- The EUT can be connected with the Test laptop via USB. The terminal software 'Putty' was used to give commands and configure the EUT in respective modes. The test laptop was then removed during the measurement.

#### **Radiated Measurements:**

- The radiated sample with integrated antenna was used for the radiated spurious emissions measurement.
- The EUT with its integrated antenna was evaluated for its worst-case position and it was found that EUT in Standing position is the worst-case. Therefore, all the tests were performed in this position.
- Radiated measurements below 30 MHz were performed with the EUT positioned on the turn table and rotating 360 degrees while the loop antenna height was set at 100 cm.
- Radiated measurements above 30 MHz were performed with the EUT positioned on the turn table and rotating 360 degrees while the antenna height varies from 1 to 4 m over the measurement frequency range.
- R&S® EMC32 V11.30.00 Software was used for the Radiated spurious emission measurements.

#### **Duty Cycle Correction Details:**

- As the EUT continuous transmission of the EUT ( $D \geq 98\%$ ) can be achieved and EUT was transmitting continuously with 100% duty cycle (duty cycle variations are less than  $\pm 2\%$ ). Therefore, Duty Cycle Correction Factors was not added to all average measurements.

## **5. Measurements, Examinations and Derived Results**

### **5.1. General Comments**

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to Section 6 *Measurement Uncertainty* for details.

In accordance with DAkkS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

## 5.2. Test Results

### 5.2.1. Transmitter Radiated Emissions

#### Test Summary:

Test Engineer:	Muhammad Faiq Khan	Test Date:	29 September 2023
Test Sample Serial Number:	00001 (Radiated Test Sample)		
Test Site Identification	SR 1/2		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	FCC KDB 558074 Sections 8.5 & 8.6 referencing ANSI C63.10 Sections 11.11 and 11.12 ANSI C63.10:2013 Sections 6.3 and 6.4
Frequency Range	9 kHz to 30 MHz

#### Environmental Conditions:

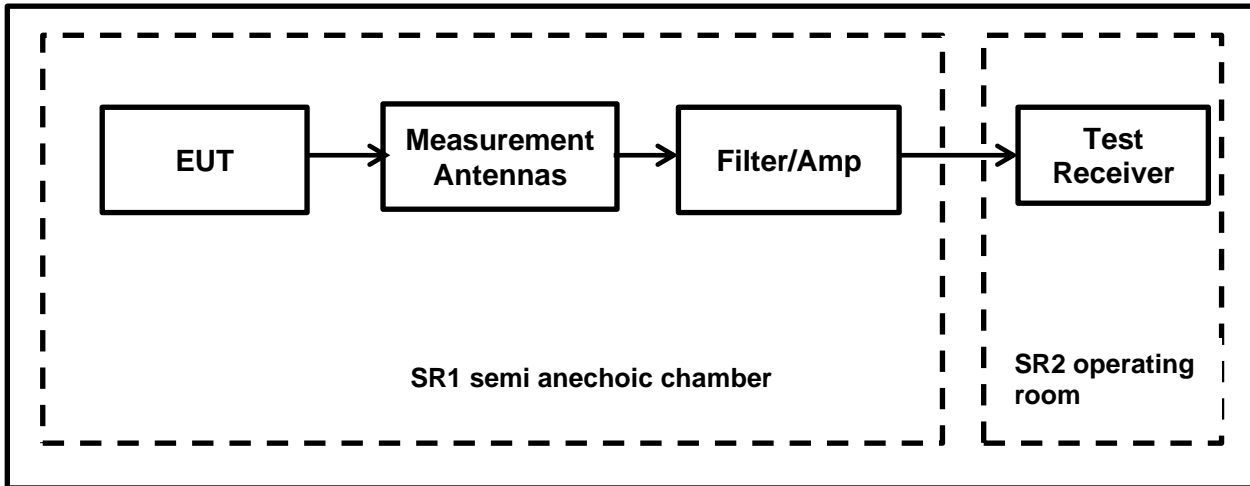

Temperature (°C):	24.1
Relative Humidity (%):	46.3

#### Notes:

- In accordance with FCC KDB 414788 D01 Radiated Test Site & ANSI C63.10 clause 5.2 an alternative test site that can demonstrate equivalence to an open area test site may be used. Therefore, the measurement was performed in a Semi Anechoic Chamber. (The OATS / SAC comparison data is available upon request).
- The limits are specified at a test distances of 30 and 300 metres. However, as specified in FCC Section 15.31 (f)(2) & ANSI C63.10 clause 6.4.3, measurements may be performed at a closer distance and the measured level extrapolated to the specified measurement distance using the method described in clauses 6.4.4, specifically sub-clause 6.4.4.1 which specifies that the measured level shall be extrapolated to the specified distance by conservatively presuming that the field strength decays at 40 dB/decade.  
Therefore, measurements were performed at a measurement distance of 3 m.
- The measured values at 3 m were extrapolated to the required measurement distances of 300 m and 30 m and compared the specified limits at those distances as follows:
  - 9 kHz- 490 kHz: measured value extrapolated from 3 m to 300 m by subtracting 80 dB at 40 dB /decade.
  - 490 kHz-30 MHz: measured value extrapolated from 3 m to 30 m by subtracting 40 dB at 40 dB /decade.
- Measurements below 30 MHz were performed in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) at a distance of 3 m. The EUT was placed at a height of 80cm from reference ground plane in the centre of the chamber turntable. The measurement loop antenna height was 100 cm.
- In accordance with FCC KDB 996369 D04 Section 3.4 (b) the Host Product testing has been performed on unwanted (spurious) radiated emissions on the worst-case modulation and channel per frequency range as shown in original filing.
- The radiated emissions measurements were performed with the EUT set to the following worst-case mode.
  - WLAN 2.4 GHz | b-Mode | 20 MHz| 1 Mbps | Bottom channel | PWR MAX |
- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
- All other emissions shown on the pre-scan plot were investigated and found to be below the measurement system noise floor.

**Transmitter Radiated Emissions (continued)****Notes:**

9. Pre-scans were performed, and markers placed on the highest measured levels. The test receiver was set to:
- Frequency range: 9 kHz-150 kHz: RBW: 300 Hz / VBW: 1 kHz
  - Frequency range: 150 kHz – 30 MHz: RBW: 10 kHz /VBW: 30 kHz
  - Detector: Peak detector
  - Trace Mode: Max Hold

**Test Setup:**

**Transmitter Radiated Emissions (continued)****Results: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel**

Frequency (MHz)	Loop Antenna Orientation	MaxPeak Level at 3 m(dBμV/m) Note 2	MaxPeak Emission Level extrapolated (dBmV/m) Note 3	Limit (dBμV/m)	Margin (dB)	Result
0.101919	90° to the EUT	32.02	-47.98	26.15	74.13	Complied
0.144854	0° to the EUT	34.96	-45.05	23.25	68.29	Complied
0.702353	90° to the EUT	32.03	-7.97	30.50	38.47	Complied
9.467995	90° to the EUT	36.13	-3.87	30.00	33.87	Complied

**Plot: 9 kHz – 30 MHz: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel****Result: Pass**

**Transmitter Radiated Emissions (continued)****Test Summary:**

<b>Test Engineer:</b>	Muhammad Faiq Khan	<b>Test Date:</b>	29 September 2023
<b>Test Sample Serial Number:</b>	00001 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

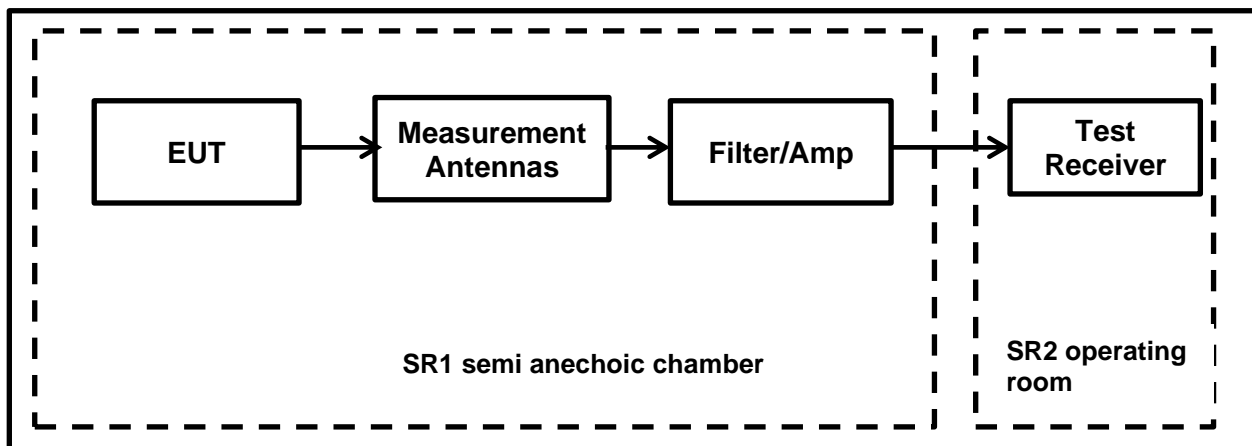

<b>FCC Reference:</b>	Parts 15.247(d) & 15.209(a)
<b>Test Method Used:</b>	FCC KDB 558074 Sections 8.5 & 8.6 referencing ANSI C63.10 Sections 11.11 and 11.12 ANSI C63.10:2013 Sections 6.3 and 6.5
<b>Frequency Range:</b>	30 MHz to 1000 MHz

**Environmental Conditions:**

<b>Temperature (°C):</b>	24.1
<b>Relative Humidity (%):</b>	46.3

**Note(s):**

- Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
- In accordance with FCC KDB 996369 D04 Section 3.4 (b) the Host Product testing has been performed on unwanted (spurious) radiated emissions on the worst-case modulation and channel per frequency range as shown in original filing.
- The radiated emissions measurements were performed with EUT set to following worst-case mode.
  - WLAN 2.4 GHz | b-Mode | 20 MHz | 1 Mbps | Bottom channel | PWR MAX
- Pre-scans were performed, and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.
- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
- All other emissions shown on the pre-scan plot were investigated and found to be below the measurement system noise floor.

**Test Setup:**

**Transmitter Radiated Emissions (continued)****Results: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel**

Frequency (MHz)	Antenna Polarization	MaxPeak Level (dB $\mu$ V/m)	Limit (dB $\mu$ V/m)	Margin (dB)	Result
48.225000	Horizontal	18.74	40.00	21.26	Complied
144.120000	Horizontal	19.42	43.50	24.08	Complied
329.933333	Horizontal	34.55	46.00	11.45	Complied
736.541667	Horizontal	31.56	46.00	14.44	Complied

**Plot: 30 MHz – 1GHz: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel****Result: Pass**

**Transmitter Radiated Emissions (continued)****Test Summary:**

<b>Test Engineer:</b>	Muhammad Faiq Khan	<b>Test Date:</b>	25 September 2023
<b>Test Sample Serial Number:</b>	00001 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

<b>FCC Reference:</b>	Parts 15.247(d) & 15.209(a)
<b>Test Method Used:</b>	FCC KDB 558074 Sections 8.5 & 8.6 referencing ANSI C63.10 Sections 11.11 and 11.12 ANSI C63.10:2013 Sections 6.3 and 6.6
<b>Frequency Range:</b>	1 GHz to 26.5 GHz

**Environmental Conditions:**

<b>Temperature (°C):</b>	22.1
<b>Relative Humidity (%):</b>	44.3

**Notes:**

1. Pre-scans above 1 GHz were performed in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) with RF absorbers on the floor at a distance of 3 m. The EUT was placed at a height of 1.5m from ground reference plane in the centre of the chamber turntable.
2. Final measurements above 1 GHz were performed in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) with absorber on the floor at a distance of 3 m. Maximum emission levels were determined by height searching the measurement antenna over the range 1 m to 4 m.
3. In accordance with FCC KDB 996369 D04 Section 3.4 (b) the Host Product testing has been performed on unwanted (spurious) radiated emissions on the worst-case modulation and channel per frequency range as shown in original filing.
4. The radiated emissions measurements were performed on Middle channel with the EUT set to the following worst-case mode.
  - WLAN 2.4 GHz | b-Mode | 20 MHz| 1 Mbps | Bottom channel | PWR MAX |
5. Pre-scans were performed, and a marker placed on the highest measured level of the appropriate plot. The test receiver resolution bandwidth was set to 1 MHz and video bandwidth 3 MHz the sweep time was set to auto.
6. The emissions shown at frequencies approximately 2.4 GHz to 2.4835 GHz on the 1 GHz to 18 GHz plots are the EUT fundamental for the tested channel.
7. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
8. All other emissions shown on the pre-scan plots were investigated and found to be below system noise floor.
9. In accordance with ANSI C63.10 Section 6.6.4.3 (Note 1), if the peak measured value complies with the average limit, it is unnecessary to perform an average measurement.
10. In accordance with ANSI C63.10-2013 Section 5.3.3 measurements above 18 GHz were performed at closer distance (1 m); because at specified measurement distance (3m) for compliance the instrumentation noise floor was typically close to the radiated emission limit.

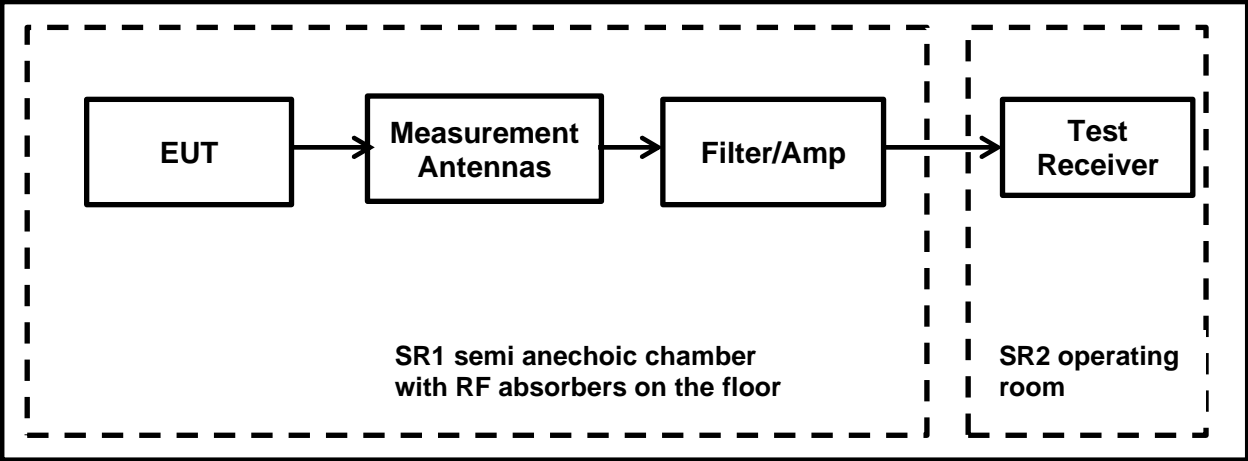

**Transmitter Radiated Emissions (continued)**

**Notes:**

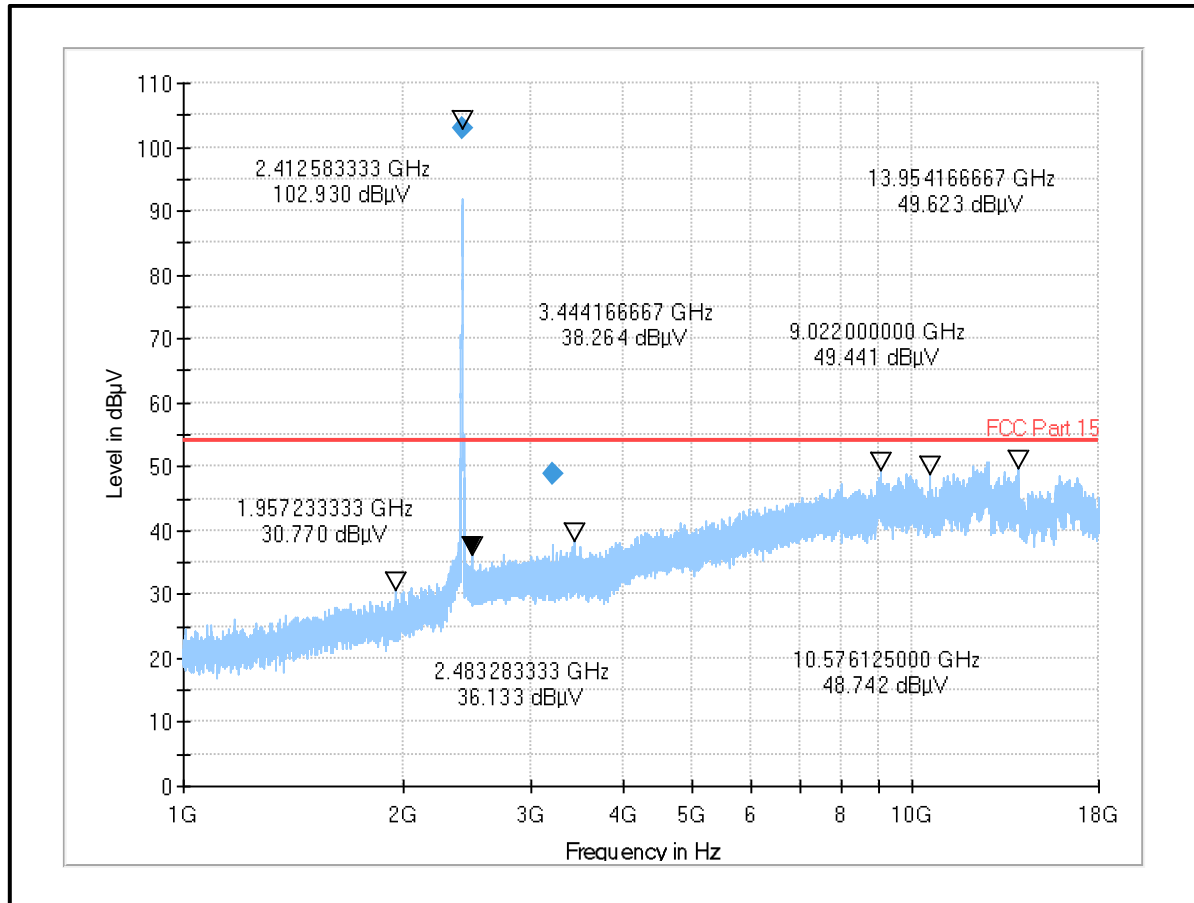

- 11. For frequency range between 18 GHz and 26.5 GHz, no critical emissions were found. All emissions shown on the pre-scans were investigated and found to be below the noise floor of the measurement system

**Test Setup:**

**Transmitter Radiated Emissions (continued)****Results: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel**

Frequency (MHz)	Antenna Polarization	Peak Level (dB $\mu$ V/m)	Average Limit (dB $\mu$ V/m)	Margin (dB)	Result
3215.833333	Vertical	48.85	54.00	5.15	Complied

**Plot: 1 GHz – 18GHz: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel****Result: Pass**

Transmitter Radiated Emissions (continued)

Results: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel

Frequency (MHz)	Antenna Polarization	Peak Level (dBμV/m)	Limit (dBμV/m)	Margin (dB)	Result
All emissions were below the level of the measurement system noise floor.					

Plot: 18 GHz – 26.5 GHz: 802.11b / 20 MHz / 1 Mbps / PWR MAX / Bottom Channel

Result: Pass

**5.2.2. Transmitter Band Edge Radiated Emissions****Test Summary:**

<b>Test Engineer:</b>	Muhammad Faiq Khan	<b>Test Date:</b>	06 & 10 October 2023
<b>Test Sample Serial Number:</b>	00001 (Radiated Test Sample)		
<b>Test Site Identification</b>	SR 1/2		

<b>FCC Reference:</b>	Parts 15.247(d) & 15.209(a)
<b>Test Method Used:</b>	DTS emissions in non-restricted frequency bands: FCC KDB 558074 Section 8.5 referencing ANSI C63.10:2013 Sections 11.11
	DTS emissions in restricted frequency bands: FCC KDB 558074 Section 8.6 referencing ANSI C63.10:2013 Sections 11.12
	ANSI C63.10:2013 Sections 6.10.4, 6.10.5

**Environmental Conditions:**

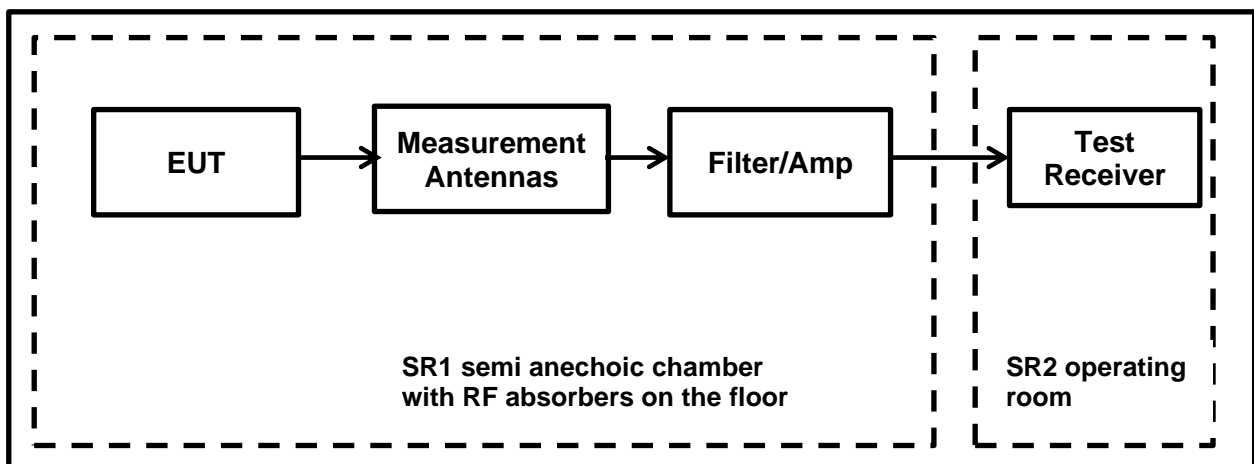

<b>Temperature (°C):</b>	22 to 24
<b>Relative Humidity (%):</b>	44 to 51

**Notes:**

- The measurements were in a semi-anechoic chamber SR1/ 2 (Asset Number 1603665) with RF absorbers on the floor at a distance of 3 m. The EUT was placed at a height of 1.5m from reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 m to 4 m.
- As the lower band edge falls within a non-restricted band, measurements were performed in accordance with FCC KDB 558074 Section 8.5 referencing ANSI C63.10 Section 11.11. As the maximum peak conducted output power was previously measured, in accordance with ANSI C63.10 Section 11.11.1(a) lower band edge measurement was performed with a peak detector and the -20 dBc limit applied.
- As the lower band edge falls within a non-restricted band, only peak measurements are required. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold. The test receiver was left to sweep for a sufficient length of time in order to maximise the carrier level and out-of-band emissions. A marker and corresponding reference level line were placed on the peak of the carrier. Marker frequencies and levels were recorded.
- The restricted band peak measurements were performed in accordance with ANSI C63.10 Section 11.12.2.4.
- As the upper band edge falls within a restricted band both peak and average measurements were recorded by placing a marker at the edge of the band. For peak measurements the test receiver resolution bandwidth was set to 1 MHz and the video bandwidth 3 MHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold. For average measurements the test receiver resolution bandwidth was set to 1 MHz and the video bandwidth 3 MHz and RMS detector in linear power averaging mode was used. The test receiver was left to sweep for 300 sweeps in order to maximise the carrier level and out-of-band emissions. A marker was placed on the band edge spot frequencies and a second marker placed on the highest emission level in the adjacent restricted band of operation (where a higher-level emission was present). Marker frequencies and levels were recorded.
- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.

**Transmitter Band Edge Radiated Emissions (continued)****Notes:**

7. There is a restricted band 10 MHz below the lower band edge. The test receiver was set up as follows: the RBW set to 1 MHz, the VBW set to 3 MHz, with the sweep time set to auto couple. The test receiver was left to sweep for 300 sweeps in order to maximise the emissions. Peak and average measurements were performed with their respective detectors. Markers were placed on the highest point on each trace.
8. The Final radiated emissions measurements were performed on Bottom, Middle and Top channels with the EUT set to the following worst-case mode.
  - WLAN 2.4 GHz | b-Mode | 20 MHz | 1 Mbps | PWR MAX
  - WLAN 2.4 GHz | g-Mode | 20 MHz | 6 Mbps | PWR MAX
  - WLAN 2.4 GHz | n-Mode | 20 MHz | MCS0 | PWR MAX
9. As the EUT continuous transmission of the EUT ( $D \geq 98\%$ ) can be achieved and EUT was transmitting continuously with 100% duty cycle (duty cycle variations are less than  $\pm 2\%$ ). Therefore, Duty Cycle Correction Factors was not added to all average measurements.

**Test Setup:**

**Transmitter Band Edge Radiated Emissions (continued)****Results: 802.11b / 20 MHz / 1 Mbps / PWR MAX****Results: Lower Band Edge / Peak**

Frequency (MHz)	Peak Level (dB $\mu$ V/m)	-20 dBc Limit (dB $\mu$ V/m)	Margin (dB)	Result
2399.95	47.69	77.60	29.91	Complied

6. Measurement Uncertainty

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Confidence Level (%)	Calculated Uncertainty
Radiated Spurious Emissions	95%	±3.10 dB
Band Edge Radiated Emissions	95%	±3.10 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.
