DRONESHIELD

Federal Communications Commission
Authorization and Evaluation Division

Date: 26th March 2025

Subject: Declaration of compliance to the requirements of FCC 15.121.

FCC ID: 2A9JZ-DRO-035-WB

We declare that, this scanning receiver is incapable of operating (demodulating signals) or readily being altered by the users to operate (demodulate signals), within the frequency bands allocated to the Cellular Radiotelephone Service in part 22 of this chapter (cellular telephone bands).

This device will not be able to receive and demodulate transmissions in the cellular telephone bands by means of clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer.

This device is also incapable of converting digital cellular communication transmissions to analog voice audio.

This device is designed so that the tuning, control and filtering circuitry is inaccessible. Any attempts to modify the equipment to decode transmissions from the Cellular Radiotelephone Service will render the receiver inoperable.

We are aware that the modification of this device to receive transmissions from Cellular Radiotelephone Service frequency bands will be considered to constitute manufacture of such equipment. This includes any individual, individuals, entity or organization that modifies one or more scanners. Any modification to receive and demodulate transmissions from the Cellular Radiotelephone Service frequency bands voids the certification of the scanning receiver, regardless of the date of manufacture of the original unit.

Sincerely,

Paul Cenoz

Paul Cenoz
