## Solar Light

- Wider range motion detection
- Intelligent control with higher brightness
  - Longer light-up time

 **intelamp®**  
— Solar Light Artist —

**Build different garden**  
satisfy your requirements for solar lights

The **INTELLIGENT GENERAL** lighting has high brightness and long light hours every night all year round even in winter!

The **COLORFUL DECORATIVE** lighting makes the garden and yard fantastic and different.

① ⑪ Flood light

⑤ Colorful spot light

② ⑨ ⑩ Lawn light

⑥ Pendant light

③ String light

⑦ Bluetooth string light

④ Globe lawn light

⑧ ⑫ Motion sensing light

2 sensors for 180° wide detection  
Lighting options for white and colorful

Integrated

Detachable

- ◆ Scenario for security area
- ◆ Light both white and colorful
- ◆ Lamp need locate in sunshine
- ◆ Install at medium/low height

- ◆ Scenario for security area
- ◆ Light both white and colorful
- ◆ Lamp can locate in dim area
- ◆ Solar panel locates in sunshine
- ◆ Install at medium/low height

## *Motion sensing light*

- ◆ Scenario for security area
- ◆ 2 sensors for 180° wide detection
- ◆ Wide lighting area
- ◆ Install at high height

Solar panel	40 $mW = 0.4 \text{ W}$	15 $mW = 0.15 \text{ W}$
Battery	6000 mAh	2000 mAh
Brightness	1200 lumens	600 lumens

Detection angle	180°	90°
Operation range	25FT * 2	25FT

## *Flood Light*

- ◆ Offers high brightness
- ◆ Auto turn to low bright for long lighting time in rainy days
- ◆ Easy and flexible installation
- ◆ Lamp can locate in dim, solar panel in sunshine

## *Pendant Light*

- ◆ Scenario for supplement lighting
- ◆ Brightness adjustable (high/medium/low)
- ◆ Color temperature adjustable (warm/neutral/cold)
- ◆ Control by either remote or manual

intelamp

- ◆ Scenario for lawn decoration
- ◆ Adjustable product height
- ◆ Fantastic effects with multiple colors
- ◆ Control by either remote or manual

- ◆ Scenario for lawn decoration
- ◆ Fantastic effects with multiple colors
- ◆ Stainless steel materials

## ABOUT US

intelamp is an industry leading solar lighting designer and manufacturer. Our innovative branded solar lights are designed and manufactured to the highest international standards. With over 18 years of experience our intelligent solar lights harness the very latest technologies to bring the best solar powered lighting to our valued customers. Our impressive range of products ensure long hours of light every night all year round even in Winter! From decorative garden lights that create a beautiful display to security lights that provide extra peace of mind; if you're looking for the best solar powered outdoor lights, intelamp is here for you.

# Make it Different

intelamp solar floodlight has high configuration, such as 12W monocrystalline silicon solar panel and 12000mAh safe lithium iron phosphate battery, it has true 2000LM output and long battery operation time.

- ▶ The lamp has sensitive motion sensors; it turns on to high brightness when people motion detects until the person leaves.
- ▶ When the solar lamp detects people motion and turns on, it will send signal to trigger the neighbor lamps within 30 meters, so lamps light up before people walk close.
- ▶ Each set of lamp includes separated motion sensors installing nearby the lamp. When the separated sensor detects people motion, it would trigger the lamps within 30 meters to light up.

Between the sensor and the lamp, between the lamp and the lamp, remote control signals are affected by installation direction/height and obstructions, so please test first before installing.

If you encounter any problems during installation and use, please contact us first:

- ✉ Send a message via Amazon
- ✉ send an email to mailbox: [sale5@intelamp.cn](mailto:sale5@intelamp.cn)

# *Test first, then install*

## 01

First do not connect the solar panel, put the lamp at 3-5 meters away.

## 02

Please install the battery into remote control, no reverse. Press the remote control "ON" button to turn on the light, and check each button with correct response.

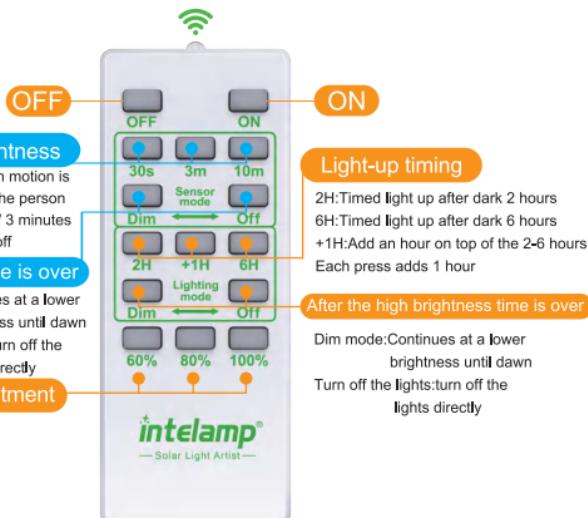

If the lamp does not light up or the brightness is not bright enough, please connect the solar panel to the lamp, charge in the sunlight for 1 hour.

After connecting the solar panel to the lamp in daytime, the light will light up and auto turn off in 1 minute without remote control operation. This is correct. In the evening or when covering the solar panel to dark, it will auto light up.

## 03

Please check against the remote control instruction manual.

**04** Press "30S" to test the sensor function. If you keep moving around the light, the light will stay high brightness; after you leave for 30 seconds, the light will dim to low.

## 05

Put the lamps in the planned-install position, each lamp distance less than 100ft, select "30S" mode, when people move in front of the lamp, it will turn on at high brightness, same time it triggers the other lamps to light up.

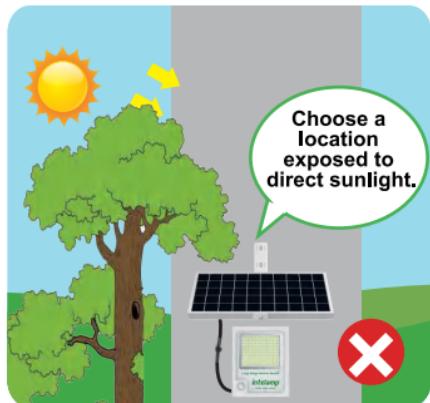

## 06

Hold the separated sensor, keep the distance within 100ft away from the lamp. Turn on the sensor's POWER switch, the green indicator turns on for 3 seconds then turns off. When the green indicator turns on every time, the lamp will turn to high brightness.

Please adjust the distance between the light and the sensor, the angle and environment for an interesting test. Try the installation position first, and then proceed to the next installation.

# Installation Notes

Please install the solar panels in a place which is exposed to direct sunlight. Expose the light in direct sunlight for 5 hours, and it will work perfectly. Insufficient charging will seriously affect the brightness and lighting up time

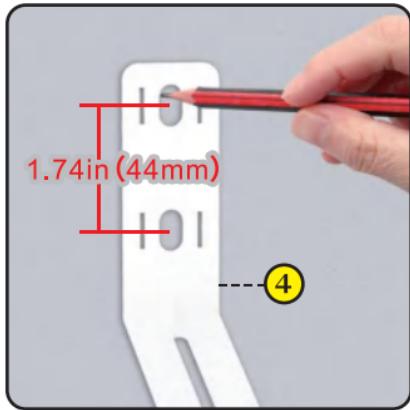

There should be no light shining on the solar panel at night, otherwise the light can not work properly

# Products and Accessories

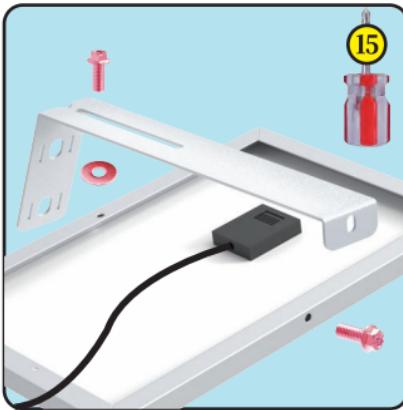

Items	Picture	what are included in one pack	what are included in two pack
Remote controller	(1)	Share

# Solar Light Installation

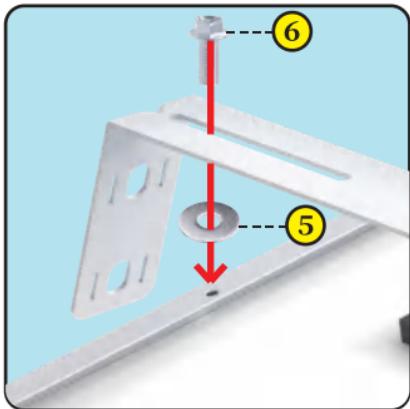

## Solar panel and bracket installation

1. Before mounting the solar panel bracket on the wall. Draw the spacing of the punched holes

2. The bracket is mounted on the back of the solar panel

3. Shims are placed under the bracket

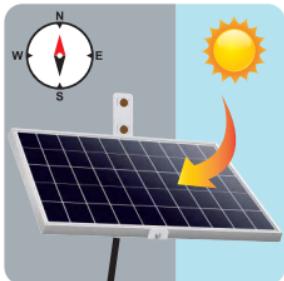

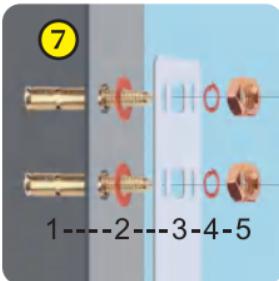

4. Torque the screws

Screws: Make sure the mounting wall can withstand at least 4 times the total weight of the luminaire!

# Solar panels mounted on the wall

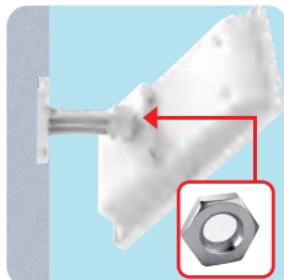

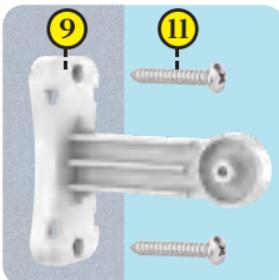

1. Punching holes in the wall

2. Installation in order

3. Solar panels must be installed in the position of direct sunlight

# Lamp head mounted on the wall

1. Punch holes in the wall to plug the expansion plug

2. Align the bracket hole position

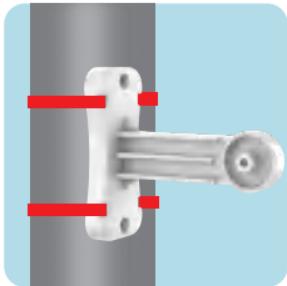

3. Lamp head and bracket Assembled with rotating screws

4. Adjustable angle of the lamp head

5. Make sure to connect Lamp head to solar panel connector

## Tie-assisted installation

1. Tie through the hole position locking
2. Tie through the bracket
3. Fixed on the column

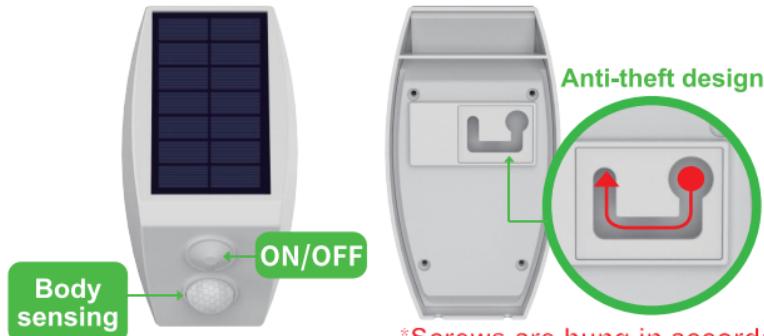

**Ties:** Nylon ties are only for temporary assistance installation, if fixed for a long time, please avoid safety hazards.

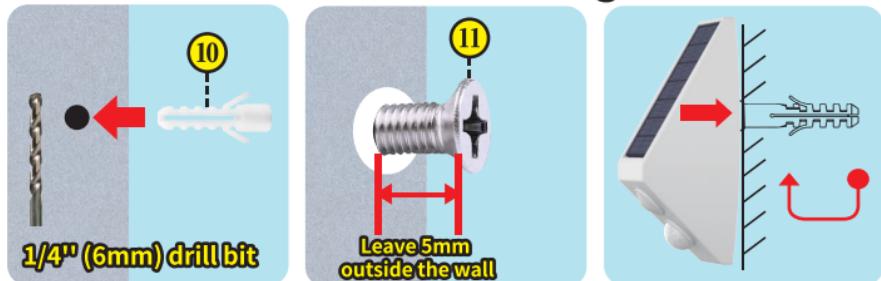

## 120° adjustment

# Sensor installation

## Screw mounting

1. The wall was perforated  
plug into the expansion plug  
(6mm diameter drill bit)

2. Twist in the screws. 3. Align the sensor with the  
holeFollow the U-shaped  
hole position to hang

## Powerful adhesive fixed installation

1. Use strong adhesive  
to stick on the back  
of the sensor first

2. Peel off the film

3. Stick on a flat wall

# ⚠ Problem Solving Quickly

Common faults	Possible causes	Solution
<b>Solar Light does not light up</b>	As long as the light is turned off with the remote control will not automatically light up	After pressing the remote control ON button to turn on the lights during the day, there is no need to turn off the lights, the darkness will automatically light on at night with the remote control off the lights, the next day, darkness will not automatically light. You must use the remote control to turn it on again
	Use at night with other lights Shine on the solar panel	Solar panels should not be installed in areas exposed to other strong light
	Connection of solar panel and lamp head, The wire is not connected	Ensure a solid connection between the solar panel and the light head connection cable
	There is not enough sunshine, insufficient charge. Go home too late, the lights have gone out	Please refer to the following solution for short time light-up
<b>Light on Short time</b>	When it's rainy and it's sunlight in winter	Long rainy or foggy days, need to accept the low brightness of solar lights or lighting
	Solar panel installation Unsuitable location	Install the solar panel in a place where there is no shade and direct sunlight for a long time, and the solar panel is tilted to the south as much as possible.
	Dirty solar panels	Regular removal of leaves and bird droppings from solar panels
<b>Remote Control is not working</b>	Remote control battery installed backwards	Check whether the battery is installed backward. If the remote control is not used for a long time, please take it out
	Remote control does not work, remote control Short distance	Close to the solar panel, set the remote control to the light head
<b>No body sensing</b>	The remote control does not select the sensor mode	After turning on the light with the remote control, select the high intensity light delay 30 seconds/3 minutes /10 minutes or 30 minutes. It is recommended to select 30 seconds.
<b>Motion sensing is not sensitive</b>	Solar lights installed too high	The light body is installed too high (1.5-3 meters recommended)
<b>Mutual control Unstable</b>	Control distance too far	It is recommended that no more than 100 ft between the lamp and the lamp and between the induction controller and the lamp
<b>Induction controller does not work</b>	No power or not turned on	<ol style="list-style-type: none"> <li>1. The POWER switch of the induction controller must be turned on</li> <li>2. The sensor controller needs to be charged in the sunlight</li> <li>3. The distance with the light does not exceed 25 meters</li> </ol>
<b>Unable to solve Problem</b>	<b>If you encounter any problems during installation and use, please contact us in first instance by sending a message via Amazon or emailing us at <a href="mailto:sale5@intelamp.cn">sale5@intelamp.cn</a></b>	

## FCC Statement

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the Federal Communications Commission (FCC) rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications to this equipment not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Privacy of communications may not be ensured when using this device.

***Good light, good night***

*To: Our Valued Customers*

*Thank you for purchasing products of intelamp.*

*intelamp has become one of the leading new eco brands. Our constant focus on product innovation using the latest battery, LED and solar technology ensures year-round reliability across our range. intelamp supplies a large number of businesses and organizations of all sizes including high street retailers, e-tailers, international government departments, schools, colleges, universities, and charities. As a global 5-star supplier of solar lighting solutions, we are proud of quality assurance and after-sales service.*

*If you have any operating problems or technical questions regarding any intelamp products, support services or more cooperation contact us: [sale5@intelamp.cn](mailto:sale5@intelamp.cn)*

*Our excellent customer support team will reply promptly with professional advise based on our 18 years of industrial experience.*

*You are very important to us. We value and welcome your feedback.*

*Please share your experiences with us by reviewing our products online or by simply sharing with your friends.*

*Thanks, and best regards,*
