

Beacon 32

Ceiling and wall mount BT sensor

Operational description

The “Beacon 32” device is generic module that intends to receive or transmit data in Bluetooth 2 and Bluetooth 4.0 (BLE Bluetooth Low Energy) protocols.

The “Beacon 32” operation frequency range is 2.402 GHz – 2.480 GHz in FM modulation.

The device is powered by set of standard batteries or external power supply (with voltage range from 3.7 to 6V DC and current supply up to 150 mA).

Once the device is powered it begins to transmit the Bluetooth signal, which is received by smartphone, running IOS or Android operation system.

The green LED indicates that the device is powered.
