

Operational description

It functions chiefly as a data sending and receiving machine to the IC tag
Use is shown as follows.

1. The equipment is connected as shown in following figures.

2. FRWA-C01U It supplies power to the Host Controller.
3. The IC tag is held up on the antenna side.
4. The power supply and data are transmitted from the antenna to the IC tag by transmittig the command from the host controller and it communicates.

(FATH-3040U: Loop antenna on the PCB)

5. FRWA-C01U acquires the data of the IC tag according to the communication, and transmits the acquired data to the host controller.

It is the above.
