

SKYWORKS®

PRELIMINARY DATA SHEET

SKY66431-11: 5G Massive IoT System-in-Package

Applications

- Personal/pet tracking
- eBike tracking
- Industrial asset tracking
- Smart metering
- Wearable medical devices
- Security/alarm systems
- Fleet management
- Industrial monitoring devices
- Low-power IoT devices

Features

- Most compact LTE modem and RF front-end in a single package:
 - Integrated baseband, transceiver, RF front end, RAM memory, crystals and power management
 - 8.8 x 11.3 x 1.585 (max.) mm BGA package, 0.5 and 1 mm pitch
 - Device weight: TBD
- Compliant to 3GPP Rel-14, upgradable to 3GPP Rel-15 & 16
- Optimized for half-duplex operation (HD-FDD) for LTE
- Pre-certified with major MNOs, FCC, ISED/IC, RED, UKCA, ACMA, and GCF/PTCRB
- Global frequency band support:
 - Low-band: B5, B8, B12, B13, B14, B17, B18, B19, B20, B26, B28, B85
 - Mid-band: B1, B2, B3, B4, B25, B66
- Best-in-class deep sleep power consumption of 1 uA
- Positioning over LTE (PoLTE), a low-power, cloud-based solution for indoor/outdoor positioning
- Embedded Low-power GNSS solution eliminating need for an external GNSS chipset for intermittent tracking
- Extremely low leakage internal PMU that enables operability for 20 years
- Throughput:
 - LTE-M (1.4 MHz bandwidth) up to 300 kbps DL, 1.1 Mbps UL
- Powerful fully integrated application MCU based on Andes D15 Core
- Single 2.8 V to 5.5 V supply operation
- Operating temperature range: -40 °C to +85 °C
- Skyworks conformal shielding, silver (Ag) free
- Halogen free, GaAs free

- REACH lead (Pb)-free and RoHS-compliant
- MSL3 @ 260 °C per JEDEC J-STD-020
- UL-94 Flammability Classification V-0

Description

The SKY66431-11 is a multi-band multi-chip System-in-Package (SiP) supporting 5G Massive IoT (LTE) platforms. The SiP integrates the entire RF front end transceiver, power management, memory, crystals and baseband modem for an LTE multi-band radio operating in the 698 MHz to 2200 MHz frequency range. NOR flash, and a few passives external to the package complete the SiP implementation.

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

This SiP includes the Sequans Monarch 2 SQN3430 chipset

For additional information on hardware setup and programming support, visit:

<https://cloud.sequans.com>

Front End Section

The front-end section includes RX low-pass filters, broadband PA with bias controller, TX low-pass harmonic filter, and antenna switch.

Transceiver Section

Fully integrated 3GPP compliant LTE-M and RF front-end solution up to +23 dBm.

- Control for synthesizer, TX/RX, adjustment, and gain control
- Clock reference of 38.4 MHz

MCU Section¹

The SKY66431-11 SiP can be used as a slim modem, driven by an external MCU via UART and GPIO.

Alternatively, the full customer application can run from its integrated Application MCU.

¹Pending future firmware release

Baseband Modem Section

- DL processing block, handling LTE downlink physical layer (RX)
- UL processing block, handling LTE uplink physical layer (TX)
- Synchronization processing block, handling frequency search and synchronization to LTE network
- Optimized for Cat-M1 channels defined in 3GPP Release 14, upgradable to Release 15 & 16
- A quad-IO SPI interface (QSPI) to 1.8 V serial NOR flash of 128 Mbit, running at 104 MHz, with support of eXecute-in-Place (XIP) and critical word first wrapping reads
- A pSRAM controller interfacing with an embedded 64-Mbit pSRAM at 104 MHz
- Three high-speed UARTs with hardware flow control
- One I²C master up to 0.4 Mbps
- One SPI master and slave up to 13 MHz
- Muxed GPIOs interruptible, with support of pulse counter and PWM functionality
- One UICC interfaces compliant with ETSI TS 102 221 specification, including SIM card removal detection and support for 1.8 V
- Secured JTAG, with possibility of enabling or disabling the interface by hardware or secured software

NOTE: This SiP includes the Sequans Monarch 2 SQN3430 chipset. For more specific information related to that chipset, which is not included in this data sheet, refer to the data sheet for that product.

A functional block diagram is shown in Figure 1. A typical application block diagram is shown in Figure 2. The pinout is shown in Figure 3. Signal pin assignments and functional pin descriptions are described in Table 1.

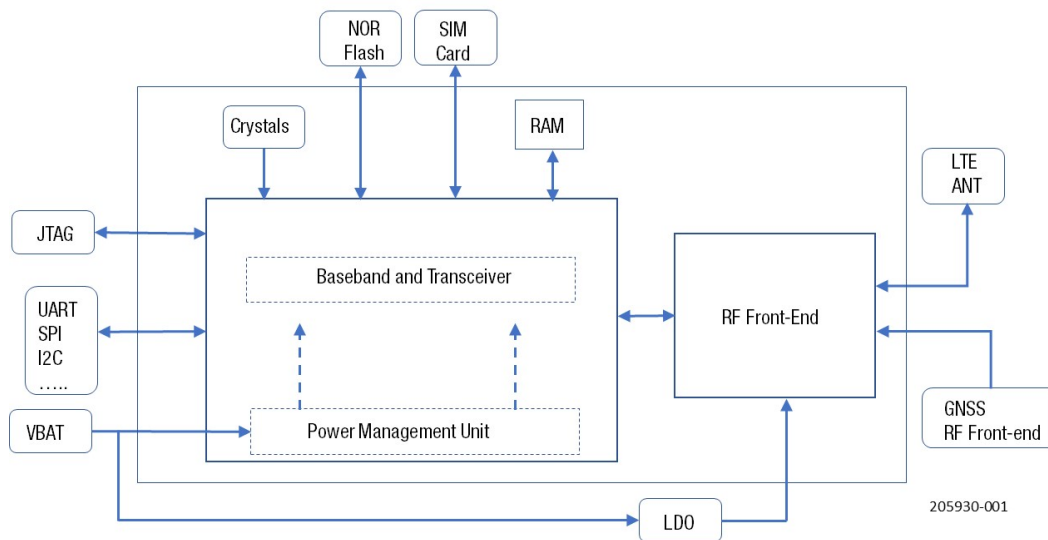

Figure 1. SKY66431-11 Functional Block Diagram.
The external NOR flash shall be pre-burnt with a valid firmware before SMT

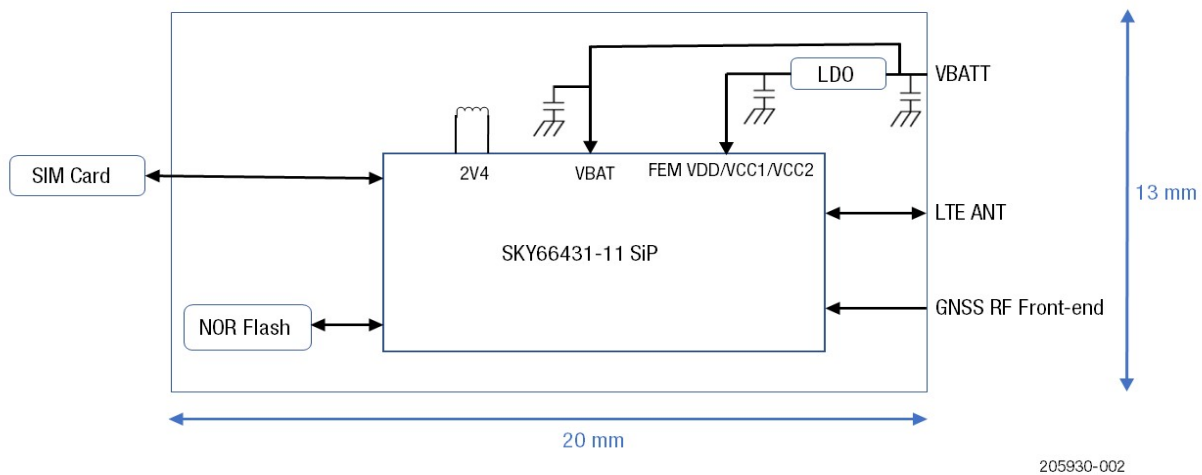

Figure 2. SKY66431-11 Typical Application Block Diagram

¹This signal is RESERVED and cannot be used as GPIO. After boot, this pin is driven to logic 1 by default to select LTE Mid-Band RX path. It is automatically driven to logic 0 whenever GNSS path is selected by software.

All pins not listed are ground pins.

UART Expected Use

SKY66431 has three UARTs. While the function of the UARTs can be configured, the default function for each UART is as follows

- UART0: data and control from external MCU via AT commands
- UART1: Debug and upgrade interface
- UART2: Modem consol.

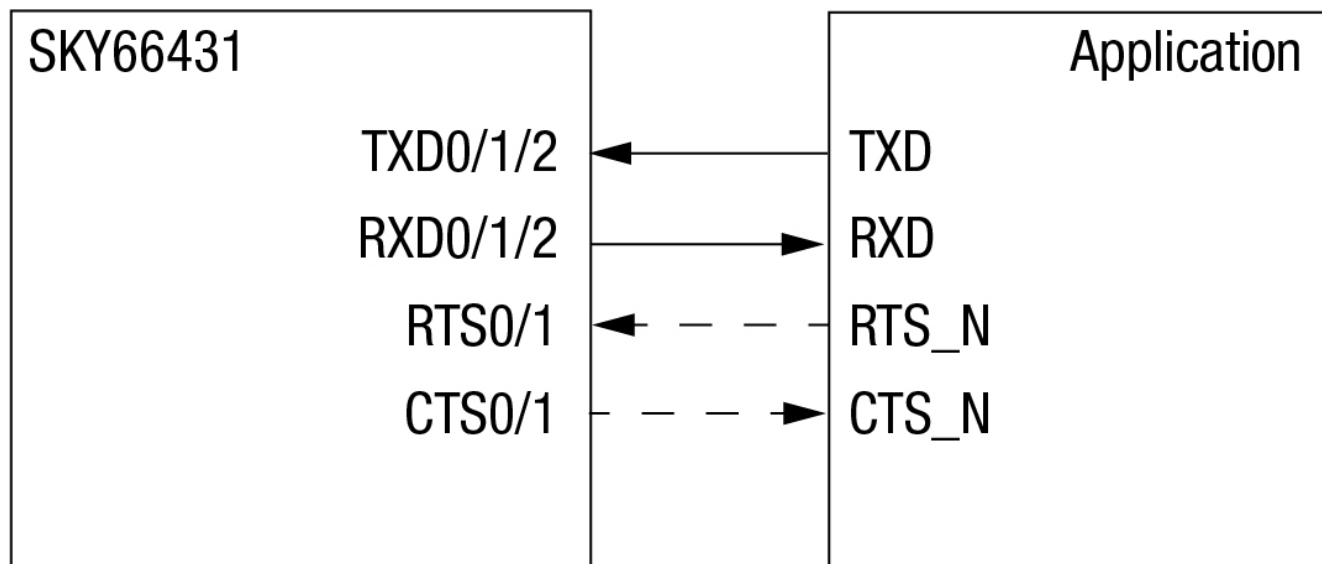

Figure 4 represents the typical implementation for the hardware flow control for UART0, UART1, and UART2. TXD and RXD signals are mandatory.

- Port TXD on the Application send data to the SKY66431 TXD signal line
- Port RXD on the Application receives data from the SKY66431 RXD signal line.

CTS0 and CTS1 are flow control signals for UART0 and UART1, Clear-To-Send, active low. They should be connected to the CTS of the remote UART device. If hardware flow control is not used, leave CTS unconnected.

RTS0 and RTS1 are flow control signals for UART0 and UART1, Ready-To-Send, active low. They should be connected to the RTS of the remote UART device. If flow control is not used, include a 1Kohm pull-down on the RTS pin.

If the SKY66431 is connected to an external component (like an RS232 driver), be sure the added component will present a logic low to the SKY66431-11.

Figure 4. UART0, UART1, and UART2 Signals Convention and Flow Control

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY66431-11 are shown in Table 2. Recommended operating conditions of the SKY66431-11 are provided in Table 3. Other SIP electrical specifications are shown in the tables that follow.

Table 2: SKY66431-11 Absolute Maximum Ratings¹

Parameter	Symbol	Min	Typ	Max	Units
Supply voltages (with RF)	V _{BATT}	-0.2		5.5	V
Operating case temperature	T _{CASE} ²	-40	25	+85	°C
Storage temperature	T _{STG}	-40		+150	°C
Electrostatic discharge:					
Human Body Model (HBM)	ESD		1000		V

¹Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

²TCASE refers to the temperature of the ground pad on the underside of the package.

ESD Handling: Industry-standard ESD handling precautions must be adhered to at all times to avoid damage to this device.

Table 3: SKY66431-11 Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Units
Supply voltage	VBATT	3.3 (3GPP Compliant) 2.8 V (Operational)	3.8	5.5	V
	FEM_VDD	2.95 (3GPP Compliant) 2.4 V (Operational)	3.1		V
	FEM_VCC1	2.95 (3GPP Compliant) 2.4 V (Operational)	3.1		V
	FEM_VCC2	2.95 (3GPP Compliant) 2.4 V (Operational)	3.1		V
	SIM0_VCC	1.62	1.8		V
Case operating temperature range	T _{RANGE}	-40	+25	+85	°C

Table 4: SKY66431-11 Power Consumption Electrical Specifications

(VBATT = 3.8 V, FEM_VDD = FEM_VCC1 = FEM_VCC2 = 3.1 V, TCASE = +25°C, QPSK/5 MHz BW / 6RB (MPR = 0), Unless Otherwise Specified)					
Power Consumption	Test Condition	Min	Typ	Max	Units
TX Peak Current¹					
I _{total_13dBm}	B13 uplink, CW, POUT = +13 dBm		220		mA
I _{total_18dBm}	B13 uplink, CW, POUT = +18 dBm		280		mA
I _{total_20dBm}	B13 uplink, CW, POUT = +20 dBm		320		mA
I _{total_23dBm}	B13 uplink, CW, POUT = +23 dBm		400		mA
	B13 uplink, modulated, average over 1 ms, max throughput		400		mA
Idle Mode Current³					
I _{IDLE_1.28s}			3.2		mA
eDRX Mode Current^{2, 3}					
I _{eDRX_81.92s}			55		uA
PSM Sleep Current³					
I _{LEAK}	System current before wake-up from PSM or eDRX		1		uA
¹ Listed as measured peak current consumption in LTE TX/RX configurations CW mode. It represents the maximum RMS current. Actual power consumption depends on LTE band of operation and duty cycle. Table 4 listed for LTE band 13 only ² Paging Time Window (PTW) set at 1.28 s (one PO in the PTW) ³ Current is firmware version dependent and for guidance only					

Table 5: SKY66431-11 Low-Band TX Electrical Specifications¹

(VBATT = 3.8 V, FEM_VDD = FEM_VCC1 = FEM_VCC2 = 3.1 V, TCASE = +25 °C, LTE Low-Band, f = 782 MHz, QPSK/5 MHz BW/6RB, Unless Otherwise Specified)

Evaluation Board Description

The SKY66431-11 Evaluation Board, shown in Figure 5, is used to test the performance of the SKY66431-11 SiP. Contact Skyworks or Sequans for the “NEKTAR SKY66431-11 SiP Evaluation Board User Manual.”

Package Dimensions

The typical part marking for the SKY66431-11 is shown below. The PCB layout footprint for the SKY66431-11 is shown in Figure 11. Package dimensions are shown in Figure 9, and tape and reel dimensions are provided in Figure 10.

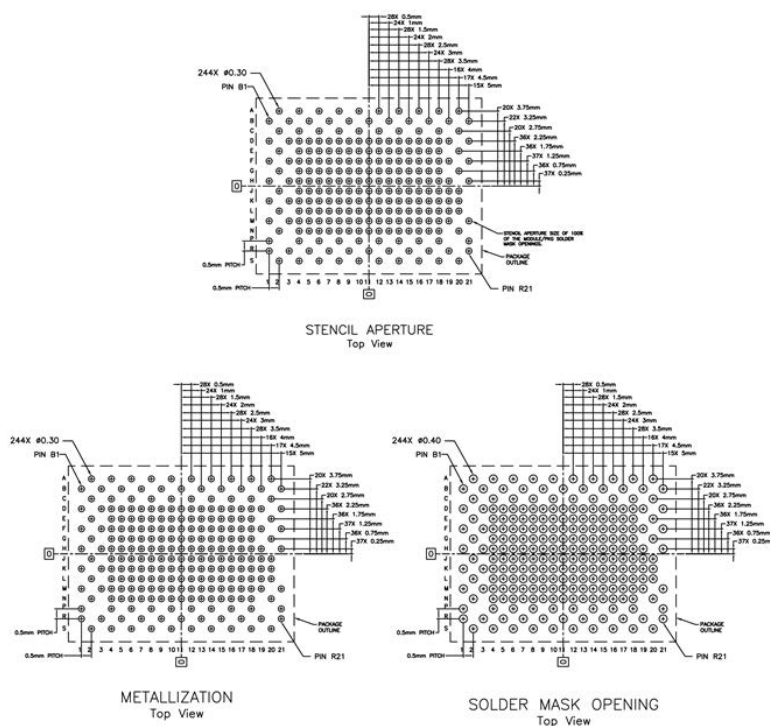

Figure 10. SKY66431-11 Typical Part Marking

NOTE: THERMAL VIAS SHOULD BE RESIN FILLED AND CAPPED IN ACCORDANCE WITH IPC-4761 TYPE VII VIAS. 30-35UM Cu THICKNESS IS RECOMMENDED.

205930-008

Figure 11. SKY66431-11 PCB Layout Footprint

NOTES: UNLESS OTHERWISE SPECIFIED.

1. DIMENSIONING AND TOLERANCING IN ACCORDANCE WITH ASME Y14.5M-1994.
 2. DIMENSIONS ARE IN MILLIMETERS
- △ PRIMARY DATUM A AND SEATING PLANE ARE DEFINED BY THE SPHERICAL CROWNS OF THE SOLDER BALLS.

205930-009

Figure 12. SKY66431-11 Package Dimensions

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY66431-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, Solder Reflow Information, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Figure 13. SKY66431-11 Tape and Reel Dimensions (TBD)

FCC Regulatory Approval for the SKY66431-11

FCC-ID: 2AAGM66431 (single modular approval)

This above identified LTE radio module is not intended to be provided to end-users but is for installation by OEM integrators only.

Installation/Integration

OEM integrators must follow Sequans installation instructions to provide for and benefit from FCC compliant module integrations and must abide especially by the following provisions:

The maximum antenna gain values (accounting for cable attenuation) to comply with the FCC maximum ERP/EIRP limits and with RF Exposure rules:

- LTE band 2 (1900 PCS): 9.27 dBi
- LTE band 4 (AWS-1): 6.54 dBi
- LTE band 5 (850): 10.90 dBi
- LTE band 12 (700a): 9.90 dBi
- LTE band 13 (700c): 10.90 dBi
- LTE band 17 (700b): 9.90 dBi
- LTE band 25 (1900+): 9.27 dBi
- LTE band 66 (AWS-3): 6.54 dBi

Sequans module integration guidelines must be closely followed.

Compliance of host integrations of the module is limited to hosts adaptation designs which are identical to Sequans reference design.

Host integrations with adaption designs deviating from Sequans reference design require either class 2 permissive change to this modular approval or a separate host approval with different FCC-ID;

Host integrations with co-located (simultaneously operating) radio transmitters must be evaluated in accordance with FCC multi-transmitter rules and may require either class 2 permissive change to this modular approval or a separate host approval with different FCC-ID, dependent on the result of the evaluation; Inquiry at FCC or a TCB is urgently recommended.

Integrations of the module into host products which are intended for portable use, i.e., less than 20 cm distance between its radiating structures (antenna) and the body of nearby persons, or which otherwise put additional technical requirements like Hearing Aid compatibility require either class 2 permissive change to this modular approval or a separate host approval with different FCC-ID;

Compliance with Unwanted Emission Limits for Digital Device

If the OEM host integration fully complies with the above described reference design and can completely inherit and rest on compliance of the existing modular approval the OEM remains still responsible to show compliance of the overall end-product with the FCC limits for unwanted conducted and radiated emissions from the digital device (unintentional radio) portion of such end-product (commonly addressed as part 15B compliance or similar).

End-product Labeling

- The module's FCC-ID must either be visible from the exterior of the host product (e.g. per window) or per electronic display, or shall be displayed on an additional exterior label per the following or similar string:
 - contains FCC-ID: 2AAGM66431
- Digital Device - Unwanted Emissions Notice: If the end-product falls under part 15 of the FCC rules (it shall display the following user notice on its exterior acc. to part 15.19 (the notice may be printed in the manual in case the host is too small)):

- This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
- Further Labeling Requirements may apply dependent on the FCC rule parts relevant to the host product.
- End-product User Instructions / Notices in the Manual: At a minimum, end-product users must be provided with the following notices at a prominent location of the product literature furnished with the product:
 - **Product Modifications:** Modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.
 - **RF Exposure Compliance:** This equipment complies with FCC radio frequency radiation exposure rules and limits set forth for an uncontrolled environment, when installed and operated with minimum distance of 20 cm between its radiating structures (antenna) and the body of nearby persons and when not operated simultaneously with other nearby radio-transmitters.
 - **Maximum Antenna Gain:** The user instructions of end-products equipped with standard external antenna connectors for the modular radio transmitter providing the option to connect other antennae than those which may or may not be bundled with the end-product must list the maximum allowed antenna gain values as derived from those given above, accounting for the cable attenuations of the actual installation.
 - **Digital Device:** Unwanted Emissions Notice: If the end-product is or contains a digital device (unintentional radio portions) and is not exempted by its use case (like vehicular use) the following part 15.105 (b) user notice shall be provided at prominent location of the product literature:
 - This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses
 - and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However,
 - there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
 - Reorient or relocate the receiving antenna;
 - Increase the separation between the equipment and receiver;
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected;
 - Consult the dealer or an experienced radio/TV technician for help
- Further User Notices: May be required dependent on the FCC rule parts relevant to the host product.
- Non-allowed User Instructions: The end-product user guidance may NOT include instructions about how to install or de-install the module.

ISED Regulatory Approval

This device complies with ISED's licence exempt RSSs. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR de l'ISED applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit supporter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

This device is intended only for OEM integrators under the following conditions: (For module device use)

1. The antenna must be installed such that 20 cm is maintained between the antenna and users, and
2. The transmitter module may not be co located with any other transmitter or antenna.

As long as the two conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end product for any additional compliance requirements required with this module installed.

Cet appareil est conçu uniquement pour les intégrateurs OEM dans les conditions suivantes: (Pour utilisation de dispositif module)

1. L'antenne doit être installée de telle sorte qu'une distance de 20 cm est respectée entre l'antenne et les utilisateurs, et
2. Le module émetteur peut ne pas être co implanté avec un autre émetteur ou antenne.

Tant que les deux conditions ci-dessus sont remplies, des essais supplémentaires sur l'émetteur ne seront pas nécessaires. Toutefois, l'intégrateur OEM est toujours responsable des essais sur son produit final pour toutes exigences de conformité supplémentaires requis pour ce module installé.

- LTE band 2 (1900 PCS): 9.27 dBi
- LTE band 4 (AWS-1): 6.54 dBi
- LTE band 5 (850): 7.60 dBi
- LTE band 12 (700a): 6.80 dBi
- LTE band 13 (700c): 7.70 dBi
- LTE band 17 (700b): 6.80 dBi
- LTE band 25 (1900+): 9.27 dBi
- LTE band 66 (AWS-3): 6.54 dBi

IMPORTANT NOTE

In the event that these conditions cannot be met (for example certain laptop configurations or colocation with another transmitter), then the Canada authorization is no longer considered valid and the IC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.

NOTE IMPORTANTE

Dans le cas où ces conditions ne peuvent être satisfaites (par exemple pour certaines configurations d'ordinateur portable ou de certaines co-localisation avec un autre émetteur), l'autorisation du Canada n'est plus considéré comme valide et l'ID IC ne peut pas être utilisé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'une autorisation distincte au Canada.

End Product Labeling

This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following:

"Contains IC:12732A-66431"

Plaque signalétique du produit final

Ce module émetteur est autorisé uniquement pour une utilisation dans un dispositif où l'antenne peut être installée de telle sorte qu'une distance de 20 cm peut être maintenue entre l'antenne et les utilisateurs. Le produit final doit être étiqueté dans un endroit visible avec l'inscription suivante: "Contient des IC: 12732A-66431".

Manual Information to the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Manuel d'information à l'utilisateur final

L'intégrateur OEM doit être conscient de ne pas fournir des informations à l'utilisateur final quant à la façon d'installer ou de supprimer ce module RF dans le manuel de l'utilisateur du produit final qui intègre ce module.

Le manuel de l'utilisateur final doit inclure toutes les informations réglementaires requises et avertissements comme indiqué dans ce manuel.

ACMA Regulatory Marking

RED Regulatory Safety Notice

CAUTION: Equipment must be supplied by ES1, PS1 circuits according to the standard EN 62368-1.

No license, whether express, implied, by estoppel or otherwise, is granted to any intellectual property rights by this document. Skyworks assumes no liability for any materials, products or information provided hereunder, including the sale, distribution, reproduction or use of Skyworks products, information or materials, except as may be provided in Skyworks' Terms and Conditions of Sale.

THE MATERIALS, PRODUCTS AND INFORMATION ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE, INCLUDING FITNESS FOR A PARTICULAR PURPOSE OR USE, MERCHANTABILITY, PERFORMANCE, QUALITY OR NON-INFRINGEMENT OF ANY INTELLECTUAL PROPERTY RIGHT; ALL SUCH WARRANTIES ARE HEREBY EXPRESSLY DISCLAIMED. SKYWORKS DOES NOT WARRANT THE ACCURACY OR COMPLETENESS OF THE INFORMATION, TEXT, GRAPHICS OR OTHER ITEMS CONTAINED WITHIN THESE MATERIALS. SKYWORKS SHALL NOT BE LIABLE FOR ANY DAMAGES, INCLUDING BUT NOT LIMITED TO ANY SPECIAL, INDIRECT, INCIDENTAL, STATUTORY, OR CONSEQUENTIAL DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR LOST PROFITS THAT MAY RESULT FROM THE USE OF THE MATERIALS OR INFORMATION, WHETHER OR NOT THE RECIPIENT OF MATERIALS HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Skyworks products are not intended for use in medical, lifesaving or life-sustaining applications, or other equipment in which the failure of the Skyworks products could lead to personal injury, death, physical or environmental damage. Skyworks customers using or selling Skyworks products for use in such applications do so at their own risk and agree to fully indemnify Skyworks for any damages resulting from such improper use or sale.

Customers are responsible for their products and applications using Skyworks products, which may deviate from published specifications as a result of design defects, errors, or operation of products outside of published parameters or design specifications. Customers should include design and operating safeguards to minimize these and other risks. Skyworks assumes no liability for applications assistance, customer product design, or damage to any equipment resulting from the use of Skyworks products outside of Skyworks' published specifications or parameters.
