Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

Safety Precautions

General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- RF exposure statements
 1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
 1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
 2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

Note: Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.

Using the Router in Vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in your country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

Protecting Your Router

To ensure error-free usage, please install and operate your router with care. Do remember the following:

- Do not expose the router to extreme conditions such as high humidity / rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

Federal Communication Commission Interference Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution:

- Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.
- This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Regulatory and Type Approval Information

Table 1: Directives

2011/65/EC	Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS)	
2012/19/EU	Directive 2012/19/EU the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE)	

Table 2: Standards of the Ministry of Information Industry of the People's Republic of China

SJ/T 11363-2006	“Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products” (2006-06).
SJ/T 11364-2006	<p>“Marking for Control of Pollution Caused by Electronic Information Products” (2006-06).</p> <p>According to the “Chinese Administration on the Control of Pollution caused by Electronic Information Products” (ACPEIP) the EPUP, i.e., Environmental Protection Use Period, of this product is 20 years as per the symbol shown here, unless otherwise marked. The EPUP is valid only as long as the product is operated within the operating limits described in the Hardware Interface Description.</p> <p>Please see Table 3 for an overview of toxic or hazardous substances or elements that might be contained in product parts in concentrations above the limits defined by SJ/T 11363-2006.</p>

Table 3: Toxic or Hazardous Substances or Elements with Defined Concentration Limits

Name of the Part	Hazardous Substances					
	(Pb)	(Hg)	(Cd)	(Cr (VI))	(PBB)	(PBDE)
Metal parts	o	o	o	o	o	o
Circuit modules	x	o	o	o	o	o
Cables and cable assemblies	o	o	o	o	o	o
Plastic and polymeric parts	o	o	o	o	o	o

o:

Indicates that this toxic or hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in SJ/T11363-2006.

x:

Indicates that this toxic or hazardous substance contained in at least one of the homogeneous materials for this part *might exceed* the limit requirement in SJ/T11363-2006.

Chapter 1 Product Overview

1.1 Key Features

The Robustel Industrial Dual SIM Cellular VPN Router (R2000) is a rugged cellular router offering state-of-the-art mobile connectivity for machine to machine (M2M) applications.

R2000 is a powerful router developed from RobustOS, a Robustel self-developed and Linux-based operating system which is designed to be used in Robustel devices. The RobustOS includes basic networking features and protocols providing customers with a very good user experience. Meanwhile, Robustel offers a Software Development Kit (SDK) for partners and customers to allow additional customization by using C, Python or Java. It also provides rich Apps to meet fragmented IoT market demands.

- Dual-SIM redundancy for continuous 3G/4G cellular network connections
- The feature *Link Manager* supporting Cellular WAN, Ethernet WAN, WLAN WAN link backup and ICMP detection
- WiFi supporting AP and Client modes (2.4 GHz), also supporting Captive Portal
- WAN – Static/PPPoE/DHCP Client
- WAN port supporting PD feature - compatible with 802.3at. (optional)
- RobustOS + SDK + App
- IPsec/OpenVPN/GRE/L2TP/PPTP/DMVPN
- Supporting DDNS
- Supporting VRRP
- Supporting DHCP server
- Supporting 802.1Q VLAN Trunk protocol
- Supporting IP Pass-through
- Management and maintenance via Web/CLI/SMS/RobustLink Cloud
- Supporting RobustVPN, a Cloud VPN Portal providing easy and secure remote access for PLCs and machines
- Supporting RobustLink, a centralized M2M management platform for remote monitoring, configuration and firmware update
- Auto reboot via SMS/Timing
- Robust industrial design (9 to 36V DC, desktop or wall mounting or DIN rail mounting)

1.2 Package Contents

Before installing your R2000 Router, verify the kit contents as following.

Note: The following pictures are for illustration purposes only, not based on their actual sizes.

- 1 x Robustel R2000 Industrial Dual SIM Cellular VPN Router

- 1 x 3-pin 3.5 mm male terminal block for power supply

- 1 x *Quick Start Guide* with download link of other documents or tools

Note: If any of the above items is missing or damaged, please contact your Robustel sales representative.

Optional Accessories (sold separately)

- 3G/4G SMA cellular antenna (stubby/magnet optional)

Stubby antenna	Magnet antenna
----------------	----------------

- RP-SMA WiFi antenna (stubby/magnet optional)

Stubby antenna

Magnet antenna

- Wall mounting kit

- 35 mm DIN rail mounting kit

- Ethernet cable

- AC/DC power adapter (12V DC, 1.5 A; EU/US/UK/AU plug optional)

1.3 Specifications

Cellular Interface

- Number of antennas: 2 (MAIN + AUX)
- Connector: SMA female
- SIM: 2 (3.0 V & 1.8 V)
- Standards: WCDMA/HSDPA/HSUPA/HSPA+/DC -HSPA+/FDD LTE
WCDMA: max DL/UL = 2.8 Mbps/384 Kbps
HSPA+: max DL/UL = 21/5.76 Mbps
DC-HSPA+: max DL/UL = 42/5.76 Mbps
FDD LTE: max DL/UL = 100/50 Mbps

Ethernet Interface

- Number of ports: 2 x 10/100 ports, 2 x LAN or 1 x LAN + 1 x WAN
- WAN port: Supporting 802.3 at PD feature (optional)
- Magnet isolation protection: 1.5 KV

WiFi Interface (Optional)

- Number of antennas: 2 (WiFi1 + WiFi2)
- Connector: RP-SMA male
- Standards: 802.11b/g/n, supporting AP and Client modes
- Frequency bands: 2.4 GHz
- Security: WEP, WPA, WPA2
- Encryption: 68/124 AES, TKIP
- Data speed: 2*2 MIMO, 300 Mbps
- Receiving sensitivity: 802.11b -93 dBm
(+/- 1 dBm) 802.11g -90 dBm
802.11n (20 MHz) -88 dBm
802.11n (40 MHz) -85 dBm

Others

- 1 x RST button
- LED indicators - 1 x RUN, 1 x PPP, 1 x USR, 3 x RSSI
- Built-in Watchdog, Timer

Software (Basic features of RobustOS)

- Network protocols: PPP, PPPoE, TCP, UDP, DHCP, ICMP, NAT, HTTP, HTTPs, DNS, ARP, BGP, RIP, OSPF, NTP, SMTP, Telnet, VLAN, SSH2, DDNS, etc.
- VPN tunnel: IPsec, OpenVPN, GRE
- Firewall: DMZ, anti-DoS, Filtering (IP/Domain name/MAC address), Port Mapping, Access Control
- Management: Web, CLI, SMS
- Serial port: Transparent, TCP Client/Server, UDP, Modbus RTU Gateway

App Center (Available Apps for RobustOS)

- Apps*: L2TP, PPTP, DMVPN, RobustVPN, VRRP, QoS, Captive Protal, WLAN Multi AP, SNMP, Language, RobustLink

*Request on demand. For more Apps please visit www.robustel.com.

Power Supply and Consumption

- Connector: 3-pin 3.5 mm female socket
- Input voltage: 9 to 36V DC
- Power consumption: Idle: 100 mA@12 V
Data link: 500 mA (peak) @12 V
- PD feature* (optional): WAN port supported
Input voltage: 48~57V DC

*It is not recommended to use DC power supply and PD power supply simultaneously.

Physical Characteristics

- Ingress protection: IP30
- Housing & Weight: Metal, 305 g
- Dimensions: 127.5 x 82.5 x 29.5 mm
- Installations: Desktop, wall mounting and 35 mm DIN rail mounting

Regulatory and Type Approvals

- Regulatory: RCM, CE, CCC, EAC
- Environmental: RoHS, WEEE
EMI: EN 55032: 2012/AC: 2013 (CE & RE) Class A
EMS: IEC 61000-4-2 (ESD) Contact Level 2; Air Level 3
IEC 61000-4-4 (EFT) Level 2
IEC 61000-4-5 (Surge) Level 3

Top&Bottom View

1.5 Ordering Information

Model	R2000-4L
Router Type	3G/LTE Router
Air Interface	WCDMA/HSDPA/HSUPA/ HSPA+ /FDD LTE
Frequency Bands	US: B2/B4/B12
4G*	
3G	B2/B5
Operating Environment	-25 to +70 °C 5 to 95% RH

**For more information about 4G frequency bands in different countries, please contact your Robustel sales representative.*

Chapter 2 Hardware Installation

2.1 PIN Assignment

PIN	Polarity
1	Positive
2	Negative
3	GND

2.2 LED Indicators

The R2000 Router has been designed to be placed on a desktop. Below is the bottom view of the R2000.

Name	Color	Status	Description
RUN	Green	On, fast blinking (250 mSec blink time)	Router is powered on (System is initializing)
		On, blinking (500 mSec blink time)	Router starts operating
		Off	Router is powered off
PPP	Green	On, solid	Link connection is working
		Off	Link connection is not working
USR-SIM	Green	On, blinking	Backup card is being used
		Off	Main card is being used
USR-NET	Green	On, solid	Network is joined successfully and worked in an optimum one
		On, blinking	Network is joined successfully but worked in a lower-level

			than standard
		Off	Network is not joined or joining
USR-OpenVPN	Green	On, solid	OpenVPN connection is established
		Off	OpenVPN connection is not established
USR-IPsec	Green	On, solid	IPsec connection is established
		Off	IPsec connection is not established
USR-WiFi	Green	On, solid	WiFi is enabled and working properly
		Off	WiFi is disabled or not working properly
	Green	On, 3 solid lights	High Signal strength (21-31) is available
		On, 2 solid lights	Medium Signal strength (11-20) is available
		On, 1 solid light	Low Signal strength (1-10) is available
		Off	No signal
		On, blinking	<p>When the network is disconnected, those three signal LEDs are designed as a binary combination code to indicate a series of error report.</p> <p>Blinking: 1 Off: 0</p> <ul style="list-style-type: none"> 001 AT command failed 010 no SIM card detected 011 need to enter the PIN code 100 need to enter the PUK code 101 registration failed 110 module error 111 not support the module

Note: You can choose the display type of USR LED. For more details, please refer to **3.25 Service > Advanced**.

2.3 Reset Button

Function	Operation
Reboot	Press and hold the RST button for 2 to 7 seconds under the operating status.
Restore to factory default settings	Wait for 3 seconds after powering up the router, press and hold the RST button until all six LEDs start blinking one by one, and release the button to return the router to factory defaults.

2.4 Ethernet Port

There are two Ethernet ports on R2000 Router, including ETH0 and ETH1. Each has two LED indicators. The yellow one is a link indicator but the green one doesn't mean anything. For details about status, see the table below.

Indicator	Status	Description
Link indicator	On, solid	Connection is established
	On, blinking	Data is being transferred
	Off	Connection is not established

2.5 Insert or Remove SIM Card

Insert or remove the SIM card as shown in the following steps.

- **Insert SIM card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot.
3. To insert SIM card, press the card with finger until you hear a click and then tighten the screws associated with

the cover by using a screwdriver.

4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

- **Remove SIM card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot.
3. To remove SIM card, press the card with finger until it pops out and then take out the card.
4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

Note:

1. Recommended torque for inserting is 0.5 N.m, and the maximum allowed is 0.7 N.m.
2. Use the specific card when the device is working in extreme temperature (temperature exceeding 40 °C), because the regular card for long-time working in harsh environment will be disconnected frequently.
3. Do not forget to twist the cover tightly to avoid being stolen.
4. Do not touch the metal of the card surface in case information in the card will lose or be destroyed.
5. Do not bend or scratch the card.
6. Keep the card away from electricity and magnetism.
7. Make sure router is powered off before inserting or removing the card.

2.6 Attach External Antenna (SMA Type)

Attach an external SMA antenna to the router's antenna connector and twist tightly. Make sure the antenna is within the correct frequency range provided by the ISP and with 50 Ohm impedance.

Note: Recommended torque for tightening is 0.35 N.m.

2.7 Mount the Router

The router can be placed on a desktop or mounted to a wall or a 35 mm DIN rail.

Two methods for mounting the router

- Wall mounting (measured in mm)

Use 4 pcs of M2.5*4 flat head Phillips screws to fix the wall mounting kit to the router, and then use 2 pcs of M3 drywall screws to mount the router associated with the wall mounting kit on the wall.

Note: Recommended torque for mounting is 0.5 N.m, and the maximum allowed is 0.7 N.m.

- DIN rail mounting (measured in mm)

Use 3 pcs of M3*6 flat head Phillips screws to fix the DIN rail to the router, and then hang the DIN rail on the mounting bracket. It is necessary to choose a standard bracket.

Note: Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

2.8 Ground the Router

Router grounding helps prevent the noise effect due to electromagnetic interference (EMI). Connect the router to the site ground wire by the ground screw before powering on.

Note: This product is appropriate to be mounted on a sound grounded device surface, such as a metal panel.

2.9 Connect the Router to a Computer

Connect an Ethernet cable to the port marked ETH0 or ETH1 at the bottom of the router, and connect the other end of the cable to your computer.

2.10 Power Supply

CONNECTING THE POWER CABLE

COLOR	POLARITY
RED	+
YELLOW	-

R2000 router supports reverse polarity protection, but always refers to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way.

Note: The range of power voltage is 9 to 36V DC.

2.11 PD Connection (Optional)

If you would like to power the R2000 Router through the Ethernet port, please refer to the following topology to connect the R2000 to a PSE (Power Sourcing Equipment). The range of PoE power voltage is 48~57V DC.

Note: It is not recommended to use DC power supply and PD power supply simultaneously.

Chapter 3 Initial Configuration

The router can be configured through your web browser that including IE 8.0 or above, Chrome and Firefox, etc. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. It provides an easy and user-friendly interface for configuration. There are various ways to connect the router, either through an external repeater/hub or connect directly to your PC. However, make sure that your PC has an Ethernet interface properly installed prior to connecting the router. You must configure your PC to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. If you encounter any problems accessing the router web interface, it is advisable to uninstall your firewall program on your PC, as this tends to cause problems accessing the IP address of the router.

3.1 Configure the PC

There are two methods to get IP address for the PC. One is to obtain an IP address automatically from “Local Area Connection”, and another is to configure a static IP address manually within the same subnet of the router. Please refer to the steps below.

Here take **Windows 7** as example, and the configuration for windows system is similar.

1. Click Start > Control panel, double-click **Network and Sharing Center**, and then double-click **Local Area Connection**.

2. Click **Properties** in the window of **Local Area Connection Status**.

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

4. Two ways for configuring the IP address of PC.

Obtain an IP address automatically:

Use the following IP address:

(Configured a static IP address manually within the same subnet of the router)

5. Click **OK** to finish the configuration.

3.2 Factory Default Settings

Before configuring your router, you need to know the following default settings.

Item	Description
Username	admin
Password	admin
ETH0	192.168.0.1/255.255.255.0, LAN mode
ETH1	192.168.0.1/255.255.255.0, LAN mode
DHCP Server	Enabled

3.3 Log in the Router

To log in to the management page and view the configuration status of your router, please follow the steps below.

1. On your PC, open a web browser such as Internet Explorer, Google or Firebox, etc.
2. From your web browser, type the IP address of the router into the address bar and press enter. The default IP address of the router is 192.168.0.1, though the actual address may vary.

Note: If a SIM card with a public IP address is inserted in the router, enter this corresponding public IP address in the browser's address bar to access the router wirelessly.

3. In the login page, enter the username and password, choose language and then click **LOGIN**. The default username and password are “admin”.

Note: If enter the wrong username or password over six times, the login web will be locked for 5 minutes.

3.4 Control Panel

After logging in, the home page of the R2000 Router's web interface is displayed, for example.

Using the original password to log in the router, the page will pop up the following tab

It is strongly recommended for security purposes that you change the default username and/or password. To change your username and/or password, see **3.31 System > User Management**.

Control Panel		
Item	Description	Button
Save & Apply	Click to save the current configuration into router's flash and apply the modification on every configuration page, to make the modification taking effect.	Save & Apply
Reboot	Click to reboot the router. If the Reboot button is yellow, it means that some completed configurations will take effect only after reboot.	Reboot
Logout	Click to log the current user out safely. After logging out, it will switch to login page. Shut down web page directly without logout, the next one can login web on this browser without a password before timeout.	Logout

Submit	Click to save the modification on current configuration page.	Submit
Cancel	Click to cancel the modification on current configuration page.	Cancel

Note: The steps of how to modify configuration are as bellow:

1. Modify in one page;
2. Click **Submit** under this page;
3. Modify in another page;

3.5 Status

This page allows you to view the System Information, Internet Status and LAN Status of your router.

System Information

System Information	
Device Model	R2000
System Uptime	0 days, 06:17:32
System Time	Thu Jul 6 17:28:51 2017
RAM Usage	17M Free/64M Total
Firmware Version	3.0.0
Hardware Version	1.0
Kernel Version	3.10.49
Serial Number	1111111111

System Information	
Item	Description
Device Model	Show the model name of your device.
System Uptime	Show the current amount of time the router has been connected.
System Time	Show the current system time.
RAM Usage	Show the free memory and the total memory.
Firmware Version	Show the firmware version running on the router.

Hardware Version	Show the current hardware version.
Kernel Version	Show the current kernel version.
Serial Number	Show the serial number of your device.

Internet Status

Internet Status	
Active Link	WWAN1
Uptime	0 days, 06:16:44
IP Address	10.232.152.135/255.255.255.240
Gateway	10.232.152.136
DNS	210.21.196.6 221.5.88.88

Internet Status	
Item	Description
Active Link	Show the current active link.
Uptime	Show the current amount of time the link has been connected.
IP Address	Show the IP address of current link.
Gateway	Show the gateway address of the current link.
DNS	Show the current primary DNS server and secondary server.

LAN Status

LAN Status	
IP Address	192.168.0.1/255.255.255.0
MAC Address	34:FA:40:0E:22:9F

LAN Status	
Item	Description
IP Address	Show the IP address and the Netmask of the router.
MAC Address	Show the MAC address of the router.

3.6 Interface > Link Manager

This section allows you to setup the link connection.

Link Manager **Status**

General Settings

Primary Link: WWAN1

Backup Link: WWAN2

Backup Mode: Cold Backup

Revert Interval: 0

Emergency Reboot: OFF

General Settings @ Link Manager		
Item	Description	Default
Primary Link	<p>Select from "WWAN1", "WWAN2", "WAN" or "WLAN".</p> <ul style="list-style-type: none"> WWAN1: Select to make SIM1 as the primary wireless link WWAN2: Select to make SIM2 as the primary wireless link WAN: Select to make WAN Ethernet port as the primary wired link Note: WAN link is available only if enable eth0 as WAN port in Interface > Ethernet > Ports > Port Settings. WLAN: Select to make WLAN as the primary wireless link Note: WLAN link is available only if enable WiFi as Client mode, please refer to 3.10 Interface > WiFi. 	WWAN1
Backup Link	<p>Select from "WWAN1", "WWAN2", "WAN", "WLAN" or "None".</p> <ul style="list-style-type: none"> WWAN1: Select to make SIM1 as backup wireless link WWAN2: Select to make SIM2 as backup wireless link WAN: Select to make WAN Ethernet port as the primary wired link Note: WAN link is available only if enable eth0 as WAN port in Interface > Ethernet > Ports > Port Settings. WLAN: Select to make WLAN as the primary wireless link Note: WLAN link is available only if enable WiFi as Client mode, please refer to 3.10 Interface > WiFi. None: Do not select any backup link 	WWAN2
Backup Mode	<p>Select from "Cold Backup", "Warm Backup" or "Load Balancing".</p> <ul style="list-style-type: none"> Cold Backup: The inactive link is offline on standby Warm Backup: The inactive link is online on standby Load Balancing: Use two links simultaneously <p>Note: R2000 do not support warm backup and load balancing in the situation of two WWAN links.</p>	Cold Backup
Revert Interval	<p>Specify the number of minutes that elapses before the primary link is checked if a backup link is being used in cold backup mode. 0 means disable checking.</p> <p>Note: Revert interval is available only under the cold backup mode.</p>	0
Emergency Reboot	Click the toggle button to enable/disable this option. Enable to reboot the whole system if no links available.	OFF

Note: Click  for help.

Link Settings allows you to configure the parameters of link connection, including WWAN1/WWAN2, WAN and WLAN. It is recommended to enable Ping detection to keep the router always online. The Ping detection increases the reliability and also costs the data traffic.

Link Settings				
Index	Type	Description	Connection Type	
1	WWAN1		DHCP	
2	WWAN2		DHCP	
3	WAN		DHCP	
4	WLAN		DHCP	

Click  on the right-most of WWAN1/WWAN2 to enter the configuration window.

WWAN Data Usage Statistics		
WWAN1 Monthly Stats	Clear	
WWAN2 Monthly Stats	Clear	

Click the **Clear** button to clear SIM1 or SIM2 monthly data traffic usage statistics. Data statistics will be displayed only if enable the Data Allowance function in **Interface > Link Manager > Link Settings > WWAN Settings > Data Allowance**.

3.7 Interface > LAN

This section allows you to set the related parameters for LAN port. There are two LAN ports on R2000 Router, including ETH0 and ETH1. The ETH0 and ETH1 can freely choose from lan0 and lan1, but at least one LAN port must be assigned as lan0. The default settings of ETH0 and ETH1 are lan0 and their default IP are 192.168.0.1/255.255.255.0.

LAN

By default, there is a LAN port (lan0) in the list. To begin adding a new LAN port (lan1), please configure ETH0 or ETH1 as lan1 first in **Ethernet > Ports > Port Settings**. Otherwise, the operation will be prompted as “List is full”.

LAN	Multiple IP	VLAN Trunk	Status
^ Network Settings			
Index	Interface	IP Address	Netmask
1	lan0	192.168.0.1	255.255.255.0

Note: Lan0 cannot be deleted.

You may click **+** to add a new LAN port, or click **X** to delete the current LAN port. Now, click **edit** to edit the configuration of the LAN port. The maximum count is 2.

3.8 Interface > Ethernet

This section allows you to set the related parameters for Ethernet. There are two Ethernet ports on R2000 Router, including ETH0 and ETH1. The ETH0 on the router can be configured as either a WAN port or LAN port, also can be assigned as a PoE port, while ETH1 can only be configured as a LAN port. The default settings of ETH0 and ETH1 are lan0 and their default IP are 192.168.0.1/255.255.255.0.

Ports	Status		
▲ Port Settings

3.9 Interface > Cellular

This section allows you to set the related parameters of Cellular. The R2000 Router has two SIM card slots, but do not support two SIM cards online simultaneously due to its single-module design. If insert single SIM card at the first time, SIM1 slot and SIM2 slots are available.

Cellular		Status		AT Debug

This page allows you to check the AT Debug.

The screenshot shows the 'AT Debug' section of the Robustel R2000 User Guide. It features a top navigation bar with tabs for 'Cellular', 'Status', and 'AT Debug'. The 'AT Debug' tab is active. Below the tabs is a header 'AT Debug' with a back arrow icon. The main area is divided into two text boxes: 'Command' (top) and 'Result' (bottom). A 'Send' button is located at the bottom right of the 'Result' box.

AT Debug		
Item	Description	Default
Command	Enter the AT command that you want to send to cellular module in this text box.	Null
Result	Show the AT command responded by cellular module in this text box.	Null
Send	Click the button to send AT command.	--

3.10 Interface > WiFi (Optional)

This section allows you to configure the parameters of two WiFi modes. Router supports both WiFi AP or Client modes, and default as AP.

WiFi AP

Configure Router as WiFi AP

Click **Interface > WiFi > WiFi**, select “AP” as the mode and click “Submit”.

The screenshot shows the 'Access Point' configuration section. It has a top navigation bar with tabs for 'WiFi', 'Access Point' (which is active and highlighted in green), 'Advanced', 'ACL', and 'Status'. Below the tabs is a header 'General Settings' with a back arrow icon. The main area contains two settings: 'Mode' (set to 'AP') and 'Region' (set to 'SE'). Each setting has a help icon (a question mark inside a circle) to its right.

Note: Please remember to click **Save & Apply > Reboot** after finish the configuration, so that the configuration can be took effect.

Click the **Access Point** column to configure the parameters of WiFi AP. By default, the security mode is set as “Disabled”.

Channel	Auto
SSID	router
Broadcast SSID	<input type="button" value="ON"/>
Security Mode	WEP
WEP Key	

General Settings @ Access Point		
Item	Description	Default
Enable	Click the toggle button to enable/disable the WiFi access point option.	OFF
Wireless Mode	<p>Select from “11bgn Mixed”, “11b Only”, “11g Only” or “11n Only”.</p> <ul style="list-style-type: none"> • 11bgn Mixed: Mix three agreements, for backward compatibility • 11b only: IEEE 802.11b, 11Mbit/s~2.4GHz • 11g only: IEEE 802.11g, 54Mbit/s~2.4GHz • 11n only: IEEE 802.11n, 300Mbps~600Mbps 	11bgn Mixed
Channel	<p>Select the frequency channel, including “Auto”, “1”, “2”..... “13”.</p> <ul style="list-style-type: none"> • Auto: Router will scan all frequency channels until the best one is found • 1~13 Router will be fixed to work with this channel <p>Following are the frequency of 1~13 channel:</p> <p>1: 2412 MHz 2: 2417 MHz 3: 2422 MHz 4: 2427 MHz 5: 2432 MHz 6: 2437 MHz 7: 2442 MHz 8: 2447 MHz 9: 2452 MHz 10: 2457 MHz 11: 2462 MHz 12: 2467 MHz 13: 2472 MHz</p>	Auto
SSID	Enter the Service Set Identifier, the name of your wireless network. The SSID of a client and the SSID of the AP must be identical for the client and AP to be able to communicate with each other. Enter 1 to 32 characters.	router

General Settings @ Access Point		
Item	Description	Default
Broadcast SSID	Click the toggle button to enable/disable the SSID being broadcast. When enabled, the client can scan your SSID. When disabled, the client cannot scan your SSID. If you want to connect to the router AP, you need to manually enter the SSID of router AP at WiFi client side.	ON
Security Mode	<p>Select from “Disabled”, “WPA-Personal”, “WPA-Enterprise” or “WEP”.</p> <ul style="list-style-type: none"> • Disabled: User can access the WiFi without password Note: It is strongly recommended for security purposes that you do not choose this kind of mode. • WPA-Personal: WiFi Protected Access only provides one password used for Identity Authentication • WPA-Enterprise: Provides an authentication interface for EAP which can be authenticated via Radius Authentication Server or other Extended Authentication • WEP: Wired Equivalent Privacy provides encryption for wireless device’s data transmission 	Disabled
WPA Version	<p>Select from “Auto”, “WPA” or “WPA2”.</p> <ul style="list-style-type: none"> • Auto: Router will choose automatically the most suitable WPA version • WPA2 is a stronger security feature than WPA 	Auto
Encryption	<p>Select from “Auto”, “TKIP” or “AES”.</p> <ul style="list-style-type: none"> • Auto: Router will choose automatically the most suitable encryption • TKIP: Temporal Key Integrity Protocol (TKIP) encryption uses a wireless connection. TKIP encryption can be used for WPA-PSK and WPA 802.1x authentication Note: It's not recommended to use TKIP encryption in 802.11n mode. • AES: AES encryption uses a wireless connection. AES can be used for CCMP WPA-PSK and WPA 802.1x authentication. AES is a stronger encryption algorithm than TKIP 	Auto
PSK Password	Enter the Pre share key password. When router works as AP mode, enter Master key to generate keys for encryption. A PSK Password is used as a basis for encryption methods (or cipher types) in a WLAN connection. The PSK Password should be complicated and as long as possible. For security reasons, this PSK Password should only be disclosed to users who need it, and it should be changed regularly. Enter 8 to 63 characters.	Null
Radius Authentication Server Address	Enter the address of radius authentication server.	Null
Radius Authentication Server Port	Enter the port of radius authentication server.	1812

General Settings @ Access Point		
Item	Description	Default
Radius Server Share Secret	Enter the shared secret of radius authentication server.	Null
Group Key Update Interval	Enter the time period of group key renewal.	3600
WEP Key	Enter the WEP key. The key length should be 10 or 26 hexadecimal digits depending on which WEP key is used, 64 digits or 128 digits.	Null

11N Transmit Rate	Auto (?)
Transmit Power	Max (?)
Channel Width	Auto (?)
Enable WMM	ON (?)
Enable Short GI	ON (?)
Enable AP Isolation	ON (?)
Debug Level	none (?)

Advanced Settings		
Item	Description	Default
Max Associated Stations	Set the max number of clients allowed to access the router's AP.	64
Beacon Interval	Set the interval of time in which the router AP broadcasts a beacon which is used for wireless network authentication.	100
DTIM Period	Set the delivery traffic indication message period and the router AP will multicast the data according to this period.	2
RTS Threshold	Set the "request to send" threshold. When the threshold set as 2347, the router AP will not send detection signal before sending data. And when the threshold set as 0, the router AP will send detection signal before sending data.	2347
Fragmentation Threshold	Set the fragmentation threshold of a WiFi AP. It is recommended that you use the default value 2346.	2346
Transmit Rate	Set the transmit rate. You can choose Auto or specify a Transmit Rate, including 1Mbps, 2Mbps, 5.5Mbps, 6Mbps, 11Mbps, 12Mbps, 18Mbps, 24Mbps, 36Mbps, 48Mbps, 54Mbps, MCS0, MCS1, MCS2, MCS3, MCS4, MCS5, MCS6 and MCS7.	Auto
11N Transmit Rate	Specify the transmit rate under the IEEE 802.11n mode or let is	Auto

Advanced Settings		
Item	Description	Default
	default to "Auto".	
Transmit Power	Select from "Max", "High", "Medium" or "Low".	Max
Channel Width	Select from "Auto", "20MHz" or "40MHz". Note: 40 MHz channel width provides higher available data rate, twice as many as 20 MHz channel width.	Auto
Enable WMM	Click the toggle button to enable/disable the WMM option.	ON
Enable Short GI	Click the toggle button to enable/disable the Short Guard Interval option. Short GI is a blank time between two symbols, providing a long buffer time for signal delay. Using the Short GI would increase 11% in data rates, but also result in higher packet error rates.	ON
Enable AP Isolation	Click the toggle button to enable/disable the AP isolation option. When enabled, the router will isolate all connected wireless devices. The wireless device cannot access the router directly via WLAN.	OFF
Debug Level	Select from "verbose", "debug", "info", "notice", "warning" or "none".	none

The screenshot shows the Robustel R2000 web interface with the following navigation tabs: WiFi, Access Point, Advanced (selected), ACL, and Status. The Advanced tab is expanded to show the General Settings and Access Control List sections. In General Settings, there is an 'Enable ACL' toggle switch set to 'OFF' and an 'ACL Mode' dropdown set to 'Accept'. In the Access Control List section, there is a table with columns for Index, Description, and MAC Address, and a '+' button to add new entries.

Click  to add a MAC address to the Access Control List. The maximum count for MAC address is 64.

The screenshot shows the Robustel R2000 web interface with the ACL section of the Access Control List. It displays a table with columns for Index, Description, and MAC Address. The first row has an index of 1, an empty description, and an empty MAC address field.

3.11 Network > Route

This section allows you to set the static route. Static route is a form of routing that occurs when a router uses a manually-configured routing entry, rather than information from a dynamic routing traffic. Route Information Protocol (RIP) is widely used in small network with stable use rate. Open Shortest Path First (OSPF) is made router within a single autonomous system and used in large network.

Static Route

DMZ Settings		
Item	Description	Default
Enable DMZ	Click the toggle button to enable/disable DMZ. DMZ host is a host on the internal network that has all ports exposed, except those ports otherwise forwarded.	OFF
Host IP Address	Enter the IP address of the DMZ host on your internal network.	Null
Source IP Address	Set the address which can talk to the DMZ host. Null means for any addresses.	Null

3.13 Network > IP Passthrough

Click **Network > IP Passthrough > IP Passthrough** to enable or disable the IP Pass-through option.

If router enables the IP Pass-through, the terminal device (such as PC) will enable the DHCP Client mode and connect to LAN port of the router; and after the router dial up successfully, the PC will automatically obtain the IP address and DNS server address which assigned by ISP.

3.14 VPN > IPsec

This section allows you to set the IPsec and the related parameters. Internet Protocol Security (IPsec) is a protocol suite for secure Internet Protocol (IP) communications that works by authenticating and encrypting each IP packet of a communication session.

General

General Settings @ General		
Item	Description	Default
Enable NAT Traversal	Click the toggle button to enable/disable the NAT Traversal function. This option must be enabled when router under NAT environment.	ON
Keepalive	Set the keepalive time, measured in seconds. The router will send packets to NAT server every keepalive time to avoid record remove from the NAT list.	60
Debug Enable	Click the toggle button to enable/disable this option. Enable for IPsec VPN information output to the debug port.	OFF

Tunnel

Click  to add tunnel settings. The maximum count is 3.

Expert Options	

SA Settings		
Item	Description	Default
Encrypt Algorithm	Select from “3DES”, “AES128” or “AES256” when you select “ESP” in “Protocol”. Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required.	3DES
Authentication Algorithm	Select from “MD5”, “SHA1”, “SHA2 256” or “SHA2 512” to be used in SA negotiation.	MD5
PFS Group	Select from “DHgroup2”, “DHgroup5”, “DHgroup14”, “DHgroup15”, “DHgroup16”, “DHgroup17” or “DHgroup18” to be used in SA negotiation.	DHgroup2
SA Lifetime	Set the IPsec SA lifetime. When negotiating set up IPsec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer.	28800
DPD Interval	Set the interval after which DPD is triggered if no IPsec protected packets are received from the peer. DPD is Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPsec packet, DPD checks the time the last IPsec packet was received from the peer. If the time exceeds the DPD interval, it sends a DPD hello to the peer. If the local end receives	60

SA Settings		
Item	Description	Default
	no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPsec SAs based on the IKE SA.	
DPD Failures	Set the timeout of DPD (Dead Peer Detection) packets.	180
Advanced Settings		
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the inner headers of IP packets.	OFF
Expert Options	Add more PPP configuration options here, format: config-desc;config-desc, e.g. protostack=netkey;plutodebug=none	Null

3.15 VPN > OpenVPN

This section allows you to set the OpenVPN and the related parameters. OpenVPN is an open-source software application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. Router supports point-to-point and point-to-points connections.

Tunnel Settings @ GRE		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Enable	Click the toggle button to enable/disable this GRE tunnel.	ON
Description	Enter a description for this GRE tunnel.	Null
Remote IP Address	Set the remote real IP address of the GRE tunnel.	Null
Local Virtual IP Address	Set the local virtual IP address of the GRE tunnel.	Null
Local Virtual Netmask	Set the local virtual Netmask of the GRE tunnel.	Null
Remote Virtual IP Address	Set the remote virtual IP Address of the GRE tunnel.	Null
Enable Default Route	Click the toggle button to enable/disable this option. When enabled, all the traffics of the router will go through the GRE VPN.	OFF
Enable NAT	Click the toggle button to enable/disable this option. This option must be enabled when router under NAT environment.	OFF
Secrets	Set the key of the GRE tunnel.	Null

Status

This section allows you to view the status of GRE tunnel.

Index	Description	Status	Local IP Address	Remote IP Address	Uptime

3.17 Services > Syslog

This section allows you to set the syslog parameters. The system log of the router can be saved in the local, also supports to be sent to remote log server and specified application debugging. By default, the “Log to Remote” option is disabled.

Enable	<input checked="checked" type="button"/> ON	<input type="button"/> OFF
Syslog Level	Debug	
Save Position	RAM	<input type="button"/> ?
Log to Remote	<input type="button"/> ON	<input checked="checked" type="button"/> OFF

The window is displayed as below when enabling the “Log to Remote” option.

The screenshot shows the 'Syslog Settings' configuration page. The 'Log to Remote' option is set to 'ON' (blue). Other settings include 'Enable' (ON), 'Syslog Level' (Debug), 'Save Position' (RAM), 'Add Identifier' (OFF), 'Remote IP Address' (empty), and 'Remote Port' (514).

Syslog Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the Syslog settings option.	OFF
Syslog Level	Select from “Debug”, “Info”, “Notice”, “Warning” or “Error”, which from low to high. The lower level will output more syslog in details.	Debug
Save Position	Select the save position from “RAM”, “NVM” or “Console”. The data will be cleared after reboot when choose “RAM”. Note: It's not recommended that you save syslog to NVM (Non-Volatile Memory) for a long time.	RAM
Log to Remote	Click the toggle button to enable/disable this option. Enable to allow router sending syslog to the remote syslog server. You need to enter the IP and Port of the syslog server.	OFF
Add Identifier	Click the toggle button to enable/disable this option. When enabled, you can add serial number to syslog message which used for loading Syslog to RobustLink.	OFF
Remote IP Address	Enter the IP address of syslog server when enabling the “Log to Remote” option.	Null
Remote Port	Enter the port of syslog server when enabling the “Log to Remote” option.	514

3.18 Services > Event

This section allows you to set the event parameters. Event feature provides an ability to send alerts by SMS or Email when certain system events occur.

The screenshot shows the 'General Settings' configuration page. The 'Signal Quality Threshold' field is set to 0.

General Settings @ Event		
Item	Description	Default
Signal Quality Threshold	Set the threshold for signal quality. Router will generate a log event when the actual threshold is less than the specified threshold. 0 means disable this option.	0

Filter Message	Enter the filtering message based on the keywords set by users. Click the “Refresh” button, the filtered event will be displayed in the follow box. Use “&” to separate more than one filter message, such as message1&message2.	Null

3.19 Services > NTP

This section allows you to set the related NTP (Network Time Protocol) parameters, including Time zone, NTP Client and NTP Server.

The screenshot shows the NTP configuration interface with the following sections:

- Timezone Settings:** Includes a dropdown for Time Zone (set to UTC+08:00) and an Expert Setting input field.
- NTP Client Settings:** Includes an Enable toggle (set to ON), Primary NTP Server (set to pool.ntp.org), Secondary NTP Server (empty), and NTP Update Interval (set to 0).
- NTP Server Settings:** Includes an Enable toggle (set to OFF).

NTP		
Item	Description	Default
Timezone Settings		
Time Zone	Click the drop down list to select the time zone you are in.	UTC +08:00
Expert Setting	Specify the time zone with Daylight Saving Time in TZ environment variable format. The Time Zone option will be ignored in this case.	Null
NTP Client Settings		
Enable	Click the toggle button to enable/disable this option. Enable to synchronize time with the NTP server.	ON
Primary NTP Server	Enter primary NTP Server's IP address or domain name.	pool.ntp.org
Secondary NTP Server	Enter secondary NTP Server's IP address or domain name.	Null
NTP Update interval	Enter the interval (minutes) synchronizing the NTP client time with the NTP server's. Minutes wait for next update, and 0 means update only once.	0
NTP Server Settings		
Enable	Click the toggle button to enable/disable the NTP server option.	OFF

This window allows you to view the current time of router and also synchronize the router time. Click **Sync** button to synchronize the router time with the PC's.

3.20 Services > SMS

This section allows you to set SMS parameters. Router supports SMS management, and user can control and configure their routers by sending SMS. For more details about SMS control, refer to **4.1.2 SMS Remote Control**.

SMS Management Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the SMS Management option. Note: If this option is disabled, the SMS configuration is invalid.	ON
Authentication Type	Select Authentication Type from "Password", "Phonenum" or "Both". <ul style="list-style-type: none"> • Password: Use the same username and password as WEB manager for authentication. For example, the format of the SMS should be "username: password; cmd1; cmd2; ..." • Phonenum: Use the Phone number for authentication, and user should set the Phone Number that is allowed for SMS management. The format of the SMS should be "cmd1; cmd2; ..." • Both: Use both the "Password" and "Phonenum" for authentication. User should set the Phone Number that is allowed for SMS management. The format of the SMS should be "username: password; cmd1; cmd2; ..." Note: Set the WEB manager password in System > User Management section.	Password
Phone Number	Set the phone number used for SMS management, and use ';' to separate each number. Note: It can be null when choose "Password" as the authentication type.	Null

User can test the current SMS service whether it is available in this section.

The screenshot shows a web-based interface for SMS testing. At the top, there are tabs for 'SMS' and 'SMS Testing', with 'SMS Testing' being the active tab. Below the tabs, there is a section titled '^ SMS Testing' with three input fields: 'Phone Number', 'Message', and 'Result'. A large 'Send' button is located at the bottom right of the testing area.

SMS Testing		
Item	Description	Default
Phone Number	Enter the specified phone number which can receive the SMS from router.	Null
Message	Enter the message that router will send it to the specified phone number.	Null
Result	The result of the SMS test will be displayed in the result box.	Null
Send	Click the button to send the test message.	--

3.21 Services > Email

Email function supports to send the event notifications to the specified recipient by ways of email.

The screenshot shows a web-based interface for email settings. At the top, there is a tab for 'Email'. Below the tab, there is a section titled '^ Email Settings' with various configuration fields: 'Enable' (toggle switch), 'Enable TLS/SSL' (toggle switch), 'Outgoing Server' (text input), 'Server Port' (text input with value '25'), 'Timeout' (text input with value '10'), 'Username' (text input), 'Password' (text input), 'From' (text input), and 'Subject' (text input).

Email Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the Email option.	OFF
Enable TLS/SSL	Click the toggle button to enable/disable the TLS/SSL option.	OFF

Email Settings		
Item	Description	Default
Outgoing server	Enter the SMTP server IP Address or domain name.	Null
Server port	Enter the SMTP server port.	25
Timeout	Set the max time for sending email to SMTP server. When the server doesn't receive the email over this time, it will try to resend.	10
Username	Enter the username which has been registered from SMTP server.	Null
Password	Enter the password of the username above.	Null
From	Enter the source address of the email.	Null
Subject	Enter the subject of this email.	Null

3.22 Services > DDNS

This section allows you to set the DDNS parameters. The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allows you whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. The service provider defaults to “DynDNS”, as shown below.

The screenshot shows the 'DDNS' tab selected in the top navigation bar. Below it, the 'Status' tab is visible. The main section is titled 'DDNS Settings'. It contains the following fields:

- Enable:** A toggle switch set to 'OFF'.
- Service Provider:** A dropdown menu set to 'DynDNS'.
- Hostname:** An empty text input field.
- Username:** An empty text input field.
- Password:** An empty text input field.

When “Custom” service provider chosen, the window is displayed as below.

The screenshot shows the 'DDNS' tab selected in the top navigation bar. Below it, the 'Status' tab is visible. The main section is titled 'DDNS Settings'. It contains the following fields:

- Enable:** A toggle switch set to 'OFF'.
- Service Provider:** A dropdown menu set to 'Custom'.
- URL:** An empty text input field.

DDNS Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the DDNS option.	OFF
Service Provider	Select the DDNS service from “DynDNS”, “NO-IP”, “3322” or “Custom”. Note: The DDNS service only can be used after registered by	DynDNS

	Corresponding service provider.	
Hostname	Enter the hostname provided by the DDNS server.	Null
Username	Enter the username provided by the DDNS server.	Null
Password	Enter the password provided by the DDNS server.	Null
URL	Enter the URL customized by user.	Null

Click “Status” bar to view the status of the DDNS.

The screenshot shows a web-based configuration interface. At the top, there is a navigation bar with tabs: 'DDNS' (highlighted in green) and 'Status' (highlighted in blue). Below the navigation bar, a section titled 'DDNS Status' is expanded. It contains a status indicator 'Status' followed by 'Disabled' and a timestamp 'Last Update Time'.

DDNS Status	
Item	Description
Status	Display the current status of the DDNS.
Last Update Time	Display the date and time for the DDNS was last updated successfully.

3.23 Services > SSH

Router supports SSH password access and secret-key access.

The screenshot shows a web-based configuration interface. At the top, there is a navigation bar with tabs: 'SSH' (highlighted in green) and 'Keys Management' (highlighted in blue). Below the navigation bar, a section titled 'SSH Settings' is expanded. It contains three configuration options: 'Enable' (set to 'ON'), 'Port' (set to '22'), and 'Disable Password Logins' (set to 'OFF').

SSH Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable this option. When enabled, you can access the router via SSH.	ON
Port	Set the port of the SSH access.	22
Disable Password Logins	Click the toggle button to enable/disable this option. When enabled, you cannot use username and password to access the router via SSH. In this case, only the key can be used for login.	OFF

The screenshot shows a web-based configuration interface. At the top, there is a navigation bar with tabs: 'SSH' (highlighted in green) and 'Keys Management' (highlighted in blue). Below the navigation bar, a section titled 'Import Authorized Keys' is expanded. It contains a file input field labeled 'Authorized Keys' with the placeholder 'Choose File No file chosen' and a 'Import' button.

Import Authorized Keys	
Item	Description
Authorized Keys	<p>Click on "Choose File" to locate an authorized key from your computer, and then click "Import" to import this key into your router.</p> <p>Note: This option is valid when enabling the password logins option.</p>

3.24 Services > Web Server

This section allows you to modify the parameters of Web Server.

Web Server Certificate Management

General Settings

HTTP Port: 80 HTTPS Port: 443

General Settings @ Web Server		
Item	Description	Default
HTTP Port	Enter the HTTP port number you want to change in router's Web Server. On a Web server, port 80 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTP Port number except 80, only adding that port number then you can login router's Web Server.	80
HTTPS Port	<p>Enter the HTTPS port number you want to change in router's Web Server. On a Web server, port 443 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTPS Port number except 443, only adding that port number then you can login router's Web Server.</p> <p>Note: HTTPS is more secure than HTTP. In many cases, clients may be exchanging confidential information with a server, which needs to be secured in order to prevent unauthorized access. For this reason, HTTP was developed by Netscape corporation to allow authorization and secured transactions.</p>	443

This section allows you to import the certificate file into the router.

Web Server Certificate Management

Import Certificate

Import Type: CA

HTTPS Certificate: Choose File No file chosen Import

Import Certificate		
Item	Description	Default
Import Type	Select from "CA" and "Private Key".	CA

Import Certificate		
Item	Description	Default
	<ul style="list-style-type: none"> • CA: a digital certificate issued by CA center • Private Key: a private key file 	
HTTPS Certificate	Click on “Choose File” to locate the certificate file from your computer, and then click “Import” to import this file into your router.	--

3.25 Services > Advanced

This section allows you to set the Advanced and parameters.

System Settings		
Item	Description	Default
Device Name	Set the device name to distinguish different devices you have installed; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	router
User LED Type	<p>Specify the display type of your USR LED. Select from “None”, “SIM”, “NET”, “OpenVPN”, “IPSec” or “WiFi”.</p> <ul style="list-style-type: none"> • None: Meaningless indication, and the LED is off • SIM: USR indicator showing the SIM status • NET: USR indicator showing the NET status • OpenVPN: USR indicator showing the OpenVPN status • IPSec: USR indicator showing the IPsec status • WiFi: USR indicator showing the WiFi status <p>Note: For more details about USR indicator, see “2.2 LED Indicators”.</p>	None

Periodic Reboot Settings		
Item	Description	Default
Periodic Reboot	Set the reboot period of the router. 0 means disable.	0
Daily Reboot Time	Set the daily reboot time of the router. You should follow the format as HH:MM, in 24h time frame, otherwise the data will be invalid. Leave it empty means disable.	Null

3.26 System > Debug

This section allows you to check and download the syslog details.

Download	Click to download system diagnosing file.	--

3.27 System > Update

This section allows you to upgrade the firmware of your router. Click **System > Update > System Update**, and click on “Choose File” to locate the firmware file to be used for the upgrade. Once the latest firmware has been chosen, click “Update” to start the upgrade process. The upgrade process may take several minutes. Do not turn off your Router during the firmware upgrade process.

Note: To access the latest firmware file, please contact your technical support engineer.

3.28 System > App Center

This section allows you to add some required or customized applications to the router. Import and install your applications to the App Center, and reboot the device according to the system prompts. Each installed application will be displayed under the “Services” menu, while other applications related to VPN will be displayed under the “VPN” menu.

Note: After importing the applications to the router, the page display may have a slight delay due to the browser cache. It is recommended that you clear the browser cache first and log in the router again.

The screenshot shows the Robustel R2000 web interface under the 'App Center' section. The 'App Install' section contains a 'File' input field, a 'Browse...' button, and an 'Install' button. The 'Installed Apps' section lists one application: 'language_chinese' (Index 1, Version 3.0.0, Status Stopped, Description Chinese language). A red 'X' button is next to the entry.

App Center		
Item	Description	Default
App Install		
File	Click on “Choose File” to locate the App file from your computer, and then click Install to import this file into your router. Note: File format should be <i>xxx.rpk</i> , e.g. <i>R2000-robustlink-1.0.0.rpk</i> .	--
Installed Apps

Item	Description	Default
Configuration Rollback		
Save as a Rollbackable Archive	Create a save point manually. Additionally, the system will create a save point every day automatically if configuration changes.	--
Configuration Archive Files		
Configuration Archive Files	View the related information about configuration archive files, including name, size and modification time.	--

3.31 System > User Management

This section allows you to change your username and password, and create or manage user accounts. One router has only one super user who has the highest authority to modify, add and manage other common users.

Note: Your new password must be more than 5 character and less than 32 characters and may contain numbers, upper and lowercase letters, and standard symbols.

Super User Settings		
Item	Description	Default
New Username	Enter a new username you want to create; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Old Password	Enter the old password of your router. The default is “admin”.	Null
New Password	Enter a new password you want to create; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Confirm Password	Enter the new password again to confirm.	Null

Click **+** button to add a new common user. The maximum rule count is 5.

Common User Settings		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Role	Select from “Visitor” and “Editor”. <ul style="list-style-type: none"> Visitor: Users only can view the configuration of router under this level 	Visitor

	<ul style="list-style-type: none">Editor: Users can view and set the configuration of router under this level	
Username	Set the Username; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Password	Set the password which at least contains 5 characters; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null

Chapter 4 Configuration Examples

4.1 Cellular

4.1.1 Cellular Dial-Up

This section shows you how to configure the primary and backup SIM card for Cellular Dial-up. Connect the router correctly and insert two SIM, then open the configuration page. Under the homepage menu, click **Interface > Link Manager > Link Manager > General Settings**, choose “WWAN1” as the primary link and “WWAN2” as the backup link, and set “Cold Backup” as the backup mode, then click “Submit”.

Note: All data will be transferred via WWAN1 when choose WWAN1 as the primary link and set backup mode as cold backup. At the same time, WWAN2 is always offline as a backup link. All data transmission will be switched to WWAN2 when the WWAN1 is disconnected.

The screenshot shows the configuration interface for the Link Manager. The General Settings section is active, displaying the following parameters:

- Primary Link: WWAN1
- Backup Link: WWAN2
- Backup Mode: Cold Backup
- Revert Interval: 0
- Emergency Reboot: OFF

The Link Settings section shows a table of connection types:

Index	Type	Description	Connection Type	Action
1	WWAN1		DHCP	
2	WWAN2		DHCP	
3	WAN		DHCP	
4	WLAN		DHCP	

Click the edit button of WWAN1 to set its parameters according to the current ISP.

The screenshot shows the configuration interface for the Link Manager. The General Settings section is active, displaying the following parameters for index 1:

- Index: 1
- Type: WWAN1
- Description: (empty)

WWAN Settings

Automatic APN Selection	<input checked="checked" type="button"/> ON <input type="button"/> OFF
Dialup Number	*99****1#
Authentication Type	Auto
Switch SIM By Data Allowance	<input checked="checked" type="button"/> ON <input type="button"/> OFF <input type="button"/>
Data Allowance	0
Billing Day	1

Ping Detection Settings

Enable	<input checked="checked" type="button"/> ON <input type="button"/> OFF
Primary Server	8.8.8.8
Secondary Server	114.114.114.114
Interval	300
Retry Interval	5
Timeout	3
Max Ping Tries	3

Advanced Settings

NAT Enable	<input checked="checked" type="button"/> ON <input type="button"/> OFF
Upload Bandwidth	10000
Download Bandwidth	10000
Overridden Primary DNS	
Overridden Secondary DNS	
Debug Enable	<input checked="checked" type="button"/> ON <input type="button"/> OFF
Verbose Debug Enable	<input checked="checked" type="button"/> ON <input type="button"/> OFF

When finished, click **Submit > Save & Apply** for the configuration to take effect.

The window is displayed below by clicking **Interface > Cellular > Advanced Cellular Settings**.

Cellular		Status		AT Debug	
Advanced Cellular Settings					
Index	SIM Card	Phone Number	Network Type	Band Select Type	
1	SIM1		Auto	All	<input checked="checked" type="checkbox"/>
2	SIM2		Auto	All	<input checked="checked" type="checkbox"/>

Click the edit button of SIM1 to set its parameters according to your application request.

General Settings

Index: 1
SIM Card: SIM1
Phone Number:
PIN Code:
Extra AT Cmd:
Telnet Port: 0

Cellular Network Settings

Network Type: Auto
Band Select Type: All

Advanced Settings

Debug Enable: ON
Verbose Debug Enable: ON

When finished, click **Submit > Save & Apply** for the configuration to take effect.

4.1.2 SMS Remote Control

R2000 supports remote control via SMS. You can use following commands to get the status of the router, and set all the parameters of the router. There are three authentication types for SMS control. You can select from “Password”, “Phonenum” or “Both”.

An SMS command has the following structure:

1. Password mode—Username: Password;cmd1;cmd2;cmd3; ...cmdn (available for every phone number).
2. Phonenum mode--cmd1; cmd2; cmd3; ... cmdn (available when the SMS was sent from the phone number which had been added in router’s phone group).
3. Both mode-- Username: Password;cmd1;cmd2;cmd3; ...cmdn (available when the SMS was sent from the phone number which had been added in router’s phone group).

SMS command Explanation:

1. User name and Password: Use the same username and password as WEB manager for authentication.
2. cmd1, cmd2, cmd3 to Cmdn, the command format is the same as the CLI command, more details about CLI cmd please refer to **Chapter 5 Introductions for CLI**.

Note: Download the configure XML file from the configured web browser. The format of SMS control command can refer to the data of the XML file.

Go to **System > Profile > Export Configuration File**, click **Generate** to generate the XML file and click **Export** to export the XML file.

Profile | **Rollback**

Import Configuration File

- Reset Other Settings to Default OFF [?](#)
- Ignore Invalid Settings OFF [?](#)
- XML Configuration File No file chosen

Export Configuration File

- Ignore Disabled Features OFF [?](#)
- Add Detailed Information OFF [?](#)
- Encrypt Secret Data OFF [?](#)
- XML Configuration File
- XML Configuration File

Default Configuration

- Save Running Configuration as Default [?](#)
- Restore to Default Configuration

XML command:

```

<lan>
<network max_entry_num="2">
<id>1</id>
<interface>lan0</interface>
<ip>172.16.10.67</ip>
<netmask>255.255.0.0</netmask>
<mtu>1500</mtu>

```

SMS cmd:

```

set lan network 1 interface lan0
set lan network 1 ip 172.16.10.67
set lan network 1 netmask 255.255.0.0
set lan network 1 mtu 1500

```

3. The semicolon character (';') is used to separate more than one commands packed in a single SMS.

4. E.g.

admin:admin;status system

In this command, username is "admin", password is "admin", and the function of the command is to get the system status.

SMS received:

```

hardware_version = 1.0
firmware_version = "3.0.0"
kernel_version = 3.10.49
device_model = R2000
serial_number = 111111111
system_uptime = "0 days, 06:17:32"
system_time = "Thu Jul 6 17:28:51 2017"

```

admin:admin;reboot

In this command, username is “admin”, password is “admin”, and the command is to reboot the Router.

SMS received:

OK

admin:admin;set firewall remote_ssh_access false;set firewall remote_telnet_access false

In this command, username is “admin”, password is “admin”, and the command is to disable the remote_ssh and remote_telnet access.

SMS received:

OK

OK

admin:admin; set lan network 1 interface lan0;set lan network 1 ip 172.16.99.11;set lan network 1 netmask 255.255.0.0;set lan network 1 mtu 1500

In this command, username is “admin”, password is “admin”, and the commands is to configure the LAN parameter.

SMS received:

OK

OK

OK

4.2 Network

4.2.1 IPsec VPN

The configuration of server and client is as follows.

IPsec VPN_Server:

Cisco 2811:

```

4.2.2 OpenVPN

OpenVPN supports two modes, including Client and P2P. Here takes Client as an example.

OpenVPN_Server:

Generate relevant OpenVPN certificate on the server side firstly, and refer to the following commands to configuration the Server:

```

local 202.96.1.100
mode server
port 1194
proto udp
dev tun
tun-mtu 1500
fragment 1500
ca ca.crt
cert Server01.crt
key Server01.key
dh dh1024.pem
server 10.8.0.0 255.255.255.0
ifconfig-pool-persist ipp.txt
push "route 192.168.3.0 255.255.255.0"
client-config-dir ccd
route 192.168.1.0 255.255.255.0
keepalive 10 120
cipher BF-CBC
comp-lzo
max-clients 100
persist-key
persist-tun
status openvpn-status.log
verb 3

```

Note: For more configuration details, please contact your technical support engineer.

OpenVPN_Client:

Click **VPN > OpenVPN > OpenVPN** as below.

Click **+** to configure the Client01 as below.

When finished, click **Submit > Save & Apply** for the configuration to take effect.

4.2.3 GRE VPN

The configuration of two points is as follows.

The window is displayed as below by clicking **VPN > GRE > GRE**.

The screenshot shows the 'GRE' configuration window with the 'Tunnel Settings' tab selected. The table below lists the parameters for GRE-1:

Index	1
Enable	ON
Description	GRE-1
Remote IP Address	59.1.1.1
Local Virtual IP Address	10.8.0.1
Remote Virtual IP Address	10.8.0.2
Enable Default Route	OFF
Enable NAT	OFF
Secrets	*****

GRE-1:

Click **+** button and set the parameters of GRE-1 as below.

The screenshot shows the 'Tunnel Settings' configuration window for GRE-1. The parameters are set as follows:

Index	1
Enable	ON
Description	GRE-1
Remote IP Address	59.1.1.1
Local Virtual IP Address	10.8.0.1
Remote Virtual IP Address	10.8.0.2
Enable Default Route	OFF
Enable NAT	OFF
Secrets	*****

When finished, click **Submit > Save & Apply** for the configuration to take effect.

GRE-2:

Click  button and set the parameters of GRE-1 as below.

▲ Tunnel Settings

Index	1
Enable	<input type="button" value="ON"/> <input type="button" value="OFF"/>
Description	GRE-2
Remote IP Address	58.1.1.1

Chapter 5 Introductions for CLI

5.1 What Is CLI

Command-line interface (CLI) is a software interface providing another way to set the parameters of equipment from the SSH or through a telnet network connection.

Route login:

Router login: admin

Password: admin

#

CLI commands:

? (Note: the '?' won't display on the page.)

!	Comments
add	Add a list entry of configuration
clear	Clear statistics
config	Configuration operation
debug	Output debug information to the console
del	Delete a list entry of configuration
exit	Exit from the CLI
help	Display an overview of the CLI syntax
ping	Send messages to network hosts
reboot	Halt and perform a cold restart
route	Static route modify dynamically, this setting will not be saved
set	Set system configuration
show	Show system configuration
status	Show running system information
tftpupdate	Update firmware using tftp
traceroute	Print the route packets trace to network host
urlupdate	Update firmware using http or ftp
ver	Show version of firmware

5.2 How to Configure the CLI

Following is a table about the description of help and the error should be encountered in the configuring program.

Commands /tips	Description
?	Typing a question mark “?” will show you the help information.
Ctrl+c	Press these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program.
Syntax error: The command is not completed	Command is not completed.
Tick space key+ Tab key	<p>It can help you finish your command. Example: # config (tick enter key) Syntax error: The command is not completed # config (tick space key+ Tab key) commit save_and_apply loaddefault</p>
# config save_and_apply / #config commit	<p>When your setting finished, you should enter those commands to make your setting take effect on the device. Note: Commit and save_and_apply plays the same role.</p>

Quick Start with Configuration Examples

The best and quickest way to master CLI is firstly to view all features from the webpage and then read all CLI commands at a time, finally learn to configure it with some reference examples.

Example 1: Show current version

```
# status system
hardware_version = 1.0
firmware_version = "3.0.0"
kernel_version = 3.10.49
device_model = R2000
serial_number = 111111111
system_uptime = "0 days, 06:17:32"
system_time = "Thu Jul 6 17:28:51 2017"
```

Example 2: Update firmware via tftp

```
# tftpupdate (space+?)
  firmware  New firmware
# tftpupdate firmware (space+?)
  String  Firmware name
# tftpupdate firmware R2000-firmware-sysupgrade-unknown.bin host 192.168.100.99 //enter a new firmware name
Downloading
R2000-firmware-s 100% |*****| 5018k 0:00:00 ETA
```

```

Flashing
Checking 100%

Example 3: Set link-manager

```

# set
# set
  at_over_telnet      AT Over Telnet
  cellular            Cellular
  ddns                Dynamic DNS
  ethernet            Ethernet
  event               Event Management
  firewall            Firewall
  gre                 GRE
  ipsec               IPsec
  lan                 Local Area Network
  link_manager        Link Manager
  ntp                NTP
  openvpn             OpenVPN
  reboot              Automatic Reboot
  RobustLink          RobustLink
  route               Route
  sms                SMS
  snmp               SNMP agent
  ssh                SSH
  syslog              Syslog
  system              System
  user_management     User Management
  vrrp               VRRP
  web_server          Web Server
# set link_manager
  primary_link        Primary Link
  backup_link          Backup Link
  backup_mode          Backup Mode
  emergency_reboot    Emergency Reboot
  link                Link Settings
# set link_manager primary_link (space+?)
Enum  Primary Link (wwan1/wwan2/wan)
# set link_manager primary_link wwan1          //select "wwan1" as primary_link

```

```

OK                                         //setting succeed

# set link_manager link 1
type          Type
desc          Description
connection_type Connection Type
wwan          WWAN Settings
static_addr   Static Address Settings
pppoe         PPPoE Settings
ping          Ping Settings
mtu           MTU
dns1_overrided Overrided Primary DNS
dns2_overrided Overrided Secondary DNS

# set link_manager link 1 type wwan1
OK

# set link_manager link 1 wwan
auto_apn      Automatic APN Selection
apn           APN
username      Username
password      Password
dialup_number Dialup Number
auth_type     Authentication Type
aggressive_reset Aggressive Reset
switch_by_data_allowance Switch SIM By Data Allowance
data_allowance Data Allowance
billing_day   Billing Day

# set link_manager link 1 wwan switch_by_data_allowance true
OK

#
# set link_manager link 1 wwan data_allowance 100          //open cellular switch_by_data_traffic
OK                                         //setting succeed

5.3 Commands Reference

Commands	Syntax	Description
Debug	Debug <i>parameters</i>	Turn on or turn off debug function
Show	Show <i>parameters</i>	Show current configuration of each function
Set	Set <i>parameters</i>	All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter
Add	Add <i>parameters</i>	

Note: Download the config.XML file from the configured web browser. The command format can refer to the config.XML file format.

Glossary

Abbr.	Description
AC	Alternating Current
APN	Access Point Name
ASCII	American Standard Code for Information Interchange
CE	Conformité Européene (European Conformity)
CHAP	Challenge Handshake Authentication Protocol
CLI	Command Line Interface for batch scripting
CSD	Circuit Switched Data
CTS	Clear to Send
dB	Decibel
dBi	Decibel Relative to an Isotropic radiator
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment (typically modems)
DCS 1800	Digital Cellular System, also referred to as PCN
DI	Digital Input
DO	Digital Output
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-frequency
DTR	Data Terminal Ready
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
EMC	Electromagnetic Compatibility
EMI	Electro-Magnetic Interference
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
EVDO	Evolution-Data Optimized
FDD LTE	Frequency Division Duplexing Long Term Evolution
GND	Ground
GPRS	General Packet Radio Service
GRE	generic route encapsulation
GSM	Global System for Mobile Communications
HSPA	High Speed Packet Access
ID	identification data
IMEI	International Mobile Equipment Identity
IP	Internet Protocol
IPsec	Internet Protocol Security
kbps	kbits per second
L2TP	Layer 2 Tunneling Protocol

Abbr.	Description
LAN	local area network
LED	Light Emitting Diode
M2M	Machine to Machine
MAX	Maximum
Min	Minimum
MO	Mobile Originated
MS	Mobile Station
MT	Mobile Terminated
OpenVPN	Open Virtual Private Network
PAP	Password Authentication Protocol
PC	Personal Computer
PCN	Personal Communications Network, also referred to as DCS 1800
PCS	Personal Communication System, also referred to as GSM 1900
PDU	Protocol Data Unit
PIN	Personal Identity Number
PLCs	Program Logic Control System
PPP	Point-to-point Protocol
PPTP	Point to Point Tunneling Protocol
PSU	Power Supply Unit
PUK	Personal Unblocking Key
R&TTE	Radio and Telecommunication Terminal Equipment
RF	Radio Frequency
RTC	Real Time Clock
RTS	Request to Send
RTU	Remote Terminal Unit
Rx	Receive Direction
SDK	Software Development Kit
SIM	subscriber identification module
SMA antenna	Stubby antenna or Magnet antenna
SMS	Short Message Service
SNMP	Simple Network Management Protocol
TCP/IP	Transmission Control Protocol / Internet Protocol
TE	Terminal Equipment, also referred to as DTE
Tx	Transmit Direction
UART	Universal Asynchronous Receiver-transmitter
UMTS	Universal Mobile Telecommunications System
USB	Universal Serial Bus
USSD	Unstructured Supplementary Service Data
VDC	Volts Direct current
VLAN	Virtual Local Area Network
VPN	Virtual Private Network
VSWR	Voltage Stationary Wave Ratio

Abbr.	Description
WAN	Wide Area Network
