FCC ID: 2AAVD-R1008

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances ≤ 50 mm, the SAR test exclusion threshold is determined according to the following
[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]
x [√f(GHz)] ≤ 3.0

1. SAR test exclusion threshold
Frequency: 2 402MHz (min. separation distances = 5 mm)
SAR test exclusion thresholds (5 mm) = 3 x 5 / (√ 2.402) = 9.678mW

Max. Tune-up Tolerance (mW)	SAR Test Exclusion Thresholds (5mm) (mW)
0.03	9.678

Calculation Value: 1 (mW) / 5 (mm) x √ 2.402 = 0.31

So, Calculation value ≤ 3.0

Remark:

-Max. conducted power 0.03 (mW) is close to 1 (mW), so 1 (mW) was calculated.
-When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
