

Introduction

Powered by QL-Find™ technology, Wootch is a security wrist watch with a digital clock, designed to assist you with child protection like never before! Wootch will alert you if your child is more than five metres away from you, via the supporting QL-Find app, designed for your Smartphone/Tablet. Wootch also has a 'FindMe' button your child can press within a 50 metre range. This alerts your Smartphone/Tablet to let you know your child needs immediate attention.

The QL-Find app also has a built in proximity detector that will assist with locating your child and you can control up to 10 Wootchs within the QL-Find app, dependent on your Smartphone/Tablet. Wootch is an app enabled accessory powered by the QL-Find app available to download at iTunes App Store and Google Play. Don't forget to download the QL-Find App, your Wootch won't work without it! To find out more about our exciting products, visit www.qllondon.com.

Disclaimer:

Wootch has been designed to assist you with child protection not to supersede your role as a parent. We are using technology that is reliant on constant Bluetooth 4.0 connection that can be lost from time to time. We recommend that you check your Bluetooth connection periodically and your battery life every month. Parents still need to make sure they are extra vigilant of their child's movements and QL London cannot be held responsible for this.

Step by step set up guide

1. Download and install the free QL-Find app from iTunes app store or Google Play. Open the QL-Find app and follow instructions.
2. Switch on your Bluetooth connection on your compatible Smartphone/Tablet.
3. Press and hold down the operations button on your Wootch until the digital clock is displayed. Please note: The correct time may not be displayed at this point.

4. Press **+** position in the top right hand corner.
5. Select Wootch from the list. Please note: It can take up to 30 seconds for your Wootch device to appear on the list.
6. Once **Wootch** is displayed on the LCD display, press the operation button positioned on the right hand side. Please note: You must press the operation button within 10 seconds of **Wootch** being displayed. This is a safety feature to prevent others from connecting to your Wootch.
7. Press save.
8. Use the range slider to adjust the proximity range you are comfortable with (between 5-20 metres).
9. Slide across the 'Device Lock'. This prevents Wootch from being turned off without your permission. Please note: You will need to switch off 'Device Lock' before you are able to turn off your Wootch.

We recommend you sit down with your child/children and let them know the following

- They should not take Wootch off unless they tell you prior to doing so.
- The panic button which activates the 'FindMe' alert should only be pressed when your child/children requires immediate attention.
- Your child should remove their Wootch before they go into the bath or shower.

QL-Find Crowd Source Tracking

Coming 2014

Our team are in the process of working on an exciting new tracking system called QL-Find Crowd Source Tracking. If your Wootch loses its Bluetooth connection, it will automatically get picked up by other QL-Find users in the same area, our server will automatically send you an update location that can be viewed on your Smartphone/Tablet map. This is an opt-in service only. The QL-Find app will notify you when this new, exciting service is available.

Wootch FAQ's

How long does it take to recharge my Wootch?

Approx. 2hrs.

How long will the battery last?

Approx. two two months, based on four hours usage per day.
