

Operation theory

1. Function: on and off, function, reset
- 2.

Transmitter

When you press the key, the remote control will transmit 433MHZ signal. The first button controls on and off of lights. The second button controls the functions of lights. The third button controls reset of lights.

Receiver

When the Receiver Module received the 433MHZ signal, it controls on and off or functions or reset of lights. And there is a button controlling the functions of lights in the receiving controller.
