Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046

To whom it may concern:

Sound Quest, LLC, hereby requests a Permissive Change Class II of the radio equipment certification for the Custom ITE Wireless certification number, FCC ID: 2AC2W-SQCUSITC. This product differs from the originally approved product in the following manor:

Antenna Characteristics. A method to implement a dual antenna system for an assistive hearing device. The hearing device includes a housing that consists of a custom in-the-ear shell fitting and a faceplate. Within the housing, there is a flexible printed-circuit-board mounted with hearing electronics, a 2.4GHz transceiver, and acoustic components. The dual antenna system consists of a planar printed antenna placed inside the housing, and a line antenna that protrudes from an exterior of the housing.

I do attest that the Field strength remains compliant with FCC rules therefore qualifying this product for this application type.

Sincerely,

A handwritten signature in blue ink that reads "Susan Reid".

Susan Reid
