

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a wooden workbench holds a spectrum analyzer. A power line filter is connected to the workbench and a power strip on the wall. A power supply unit sits on the floor between the workbench and another wooden table on the right. A tablet is placed on the right table.
Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, cross-shaped electromagnetic absorbers. A white test fixture sits on a circular turntable in the center. A black frame with a probe is positioned in the foreground. Blue and white striped caution tape is laid out on the floor.

Radiation Emission Test Setup (30MHz to1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A white, rectangular test chamber is positioned on a circular turntable. The chamber has a black top surface where a device is placed. The turntable is on a grey floor with blue and white striped safety tape. In the background, there are white walls with black cross-shaped patterns and a metal railing.
Radiation Emission Test Setup (1GHz to18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white, rectangular test chamber is positioned on a circular turntable. The chamber has a black top surface where a device is placed. The turntable is on a grey floor with yellow and black safety tape. In the background, there are white walls with black cross-shaped patterns and a red and white striped safety barrier. A blue and white striped safety tape is also visible on the floor.

**Radiation Emission
Test Setup (Above18GHz)**

*** Means' only test and setup for PART 15C .**
