Washington D.C, 20554  
USA

Subject: Test Set Up Photos

FCC ID: 2ACLYBCNEW0203

Test Report: R14221201

To whom it may concern

TCB Question:

For the > 1GHz emissions measurements, please provide information as to why cardboard boxes are present in the test set up photographs exhibit?

Lab Response:

The cardboard boxes contain the pyramidal absorbers for performing the > 1 GHz emissions measurements.

The pyramidal absorbers have been left inside the cardboard boxes for an easier storage, when not requested, and because the presence of these boxes does not have influence on the measurements.

VSWR calibration has been performed with these cardboard boxes

Yours faithfully,

R. Beghetto – Laboratory Manager
