Request for Authorisation of Product Family

Dear sirs and mesdames:

Pursuant to our authorization process of above number id, we'd like you to consider a family of alike products to be included under the same authorisation.

Differences between design of product model numbers are minimal and consist only of changes to the external body appearance, software functionality (of the sort of single digit dialing shortcut), camera resolution, memory size, and battery capacity, among others. Processor, radio bands, and other meaningful or significant components will remain the same.

The product model family can be described as follows:

Brand: Starphone

Family: Quasar

Model: Q-XY

Where X is a digit from 1 to 9, and specifies level of features

Where Y is a digit form 0 to 9, used for a time frame sequence of models.

REMARK: PCB board, structure and internal of the family of models are the same.

We will greatly appreciate the attention you can give to our request, and remain ready to answer any queries you could have.

Sincerely

Arturo Narro
