

Response to ACB Comments FCC ID: 2ACOA-WM2F 2

1. Exhibit ZENN15327-01 RFFCC 15.247 Test Report REV 0– Section 2.2 “Test Configuration” states the EUT was tested as a stand-alone device & for Radiated Emissions with fully charged batteries, however the Test Setup Photos appear to show the EUT tested outside of the enclosure, please clarify if the applicant desires a limited modular approval. Also note this section of the report also contains a typo, paragraph ends with “with ??”. Please clarify if Radiated Emissions tests were performed outside of enclosure.

*R. The device was removed from the case so that the command and control programing cable could be connected to the maintenance port of the device. The case which houses the EUT is made of a thermoplastic which is transparent to the RF energy radiating from the device.*

*The radiated emissions for the device were evaluated with the device in its enclosure and outside its enclosure, and this testing revealed no differences.*

*I reviewed the released Rev 0 report and could not locate the typographical error that you mention.*
