ATTN.: Reviewing Engineer

FCC : 2AD7T11124102301

IC: 20330-11124102301

HVINs/Models: Tag-M500, Tag-M501, Tag-M503

We hereby request Family Certification for the above mentioned HVINs/Models based on them being electrically, and physically identical apart from model name/number. The three models have different FVINs as the radio protocol used is fully controlled by software.

HVIN	FVIN	Description of differences
Tag-M500	BLE-N	Always in normal operation mode.
Tag-M501	BLE-D	Goes into duress mode when a button is pressed, otherwise in normal operation mode. Identical hardware as Tag-M500 apart from some design elements in red rather than in black.
Tag-M503	BLE-T	Goes into tamper mode when a pin in the base pops out as a result of the tag being removed from where it was mounted and where it was operated in normal operation mode. The tamper pin and a related hole in the housing is the only hardware difference.

Tests have been performed using both models, or only the Tag-501 model. For some tests the relevant operation of Tag-M500 or Tag-M503 is simply a reduction in activities compared to the operation of Tag-M501, and in these cases only the latter has been tested.
