## Novelda X4F103 Product Labelling

The Novelda X4F103 is an Ultra-Wideband (UWB) short-range impulse radar sensor module to be used with a Host Device. The module consists of a PCB board with mounted components on one side and the antenna on the other side. The dimension of the module is 12 by 12 mm.

Due to the small size of the module and the fact that the module needs to be mounted in a host device with the antenna on the outside and components and traceability information on the inside it is not possible to affix regulatory marks on the module itself. Novelda therefore requests that these can be provided on the packaging and in the X4F103 data sheet. The X4F103 datasheet chapter 5. "Regulatory Compliance Notices" contains labelling instructions for the host device.

Best regards Novelda AS
