

The device is inherently incapable of storing, running, or delivering cybersecurity or anti-virus software produced or provided by any entity identified on the FCC's Covered List, including Kaspersky Lab, Inc. or any of its successors and assignees, due to the following technical limitations:

Limitation	Justification/Evidence
No physical storage interfaces	Device is designed with no external connectors, ports, or physical interfaces that could allow data transfer or software installation. This physical design characteristic can be verified through the submitted device photographs, Block diagram and User manual.

Based on these technical limitations, we affirm that this device is inherently incapable of storing or running any form of cybersecurity or anti-virus software, including those produced by entities on the FCC's Covered List. Therefore, no additional evidence is required for this equipment.

We understand that equipment placed on the market must conform to what was certified, and we confirm that no modifications will be made to the equipment that would enable it to store or run software from entities identified on the Covered List.
