2.2.8 天线场测数据 Antenna field measurement data

test method	1. Distance Test: Connect the phone to a Bluetooth headset and place it on a non-metallic stand 60cm high. The tester wears the headset and walks backward while rotating 360 degrees. Measure the maximum distance where call and music playback remain uninterrupted in the headset.	
	2. Proximity test: The tester carries a mobile phone (preferably in the back pocket of the pants with the main ear of the Bluetooth headset) to test whether there is any jamming or breaking during human rotation.	
	3. Hand covering test: The tester wears headphones and connects with the mobile phone to play music. The test is carried out in two states: 1) Test with fingertips facing up to check whether the music is interrupted; 2) Test with fingertips facing back to check whether the music is interrupted.	
Test site	In the open area outside our office	
testing facility	Iphone6	
test result	listen to music	1. When both ears are the main ears, test 360 degrees within 11m without jamming,
		2. Single ear pull distance test: 360 degrees without lag in the left ear within 8m
		3. Single ear pull distance test: 360 degrees without lag within 8.5m of the right ear
