

Standalone SAR test exclusion considerations(BT LE)

June 10, 2015

- Min. transmitting frequency = 2402 MHz
- Min. test separation distance = 5 mm
- Max. power with turn-up tolerance = -22.00 dBm = 0.006 mW

Typical Power: -24.00 dBm \pm 2.00 dB

Measured Output Power: -22.94 dBm

Step 1) SAR test exclusion thresholds for 100MHz to 6GHz at test separationn distances \leq 50 mm = Used

$$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}]$$
$$= [0.01 / 5] * [\sqrt{2.402}]$$
$$= \textcolor{red}{0.00} \leq 3, \text{ for 1g SAR}$$

Thus SAR for this device is not required.

Step 2-1) SAR test exclusion thresholds for 100MHz to 1500MHz at test separationn distances $>$ 50 mm = N/A

$$[\text{Threshold at 50 mm in step 1)} + (\text{test separation distance} - 50 \text{ mm}) \cdot (f(\text{MHz})/150)] \text{ mW}$$

Step 2-2) SAR test exclusion thresholds for 1500MHz to 6GHz at test separationn distances $>$ 50 mm = N/A

$$[\text{Threshold at 50 mm in step 1)} + (\text{test separation distance} - 50 \text{ mm}) \cdot 10] \text{ mW}$$
