

Operation Description

Name: Mini video outdoor station

Model: M2131.P.-.

This product is a device which act as the video outdoor station in 2-wire system. Its operating supply voltage is 20~30V. It uses the STM32F051R8T6 as the microcontroller. The visitors can call resident by pushing the button. A camera is integrated in the device .The device supports RFID proximity reader for ID card through the ID card reader circuit whose operating frequency is 125KHz. The device has two unlock output interfaces to surport most type of lock.One is relay output,another is DC18V output derectly. The device has a SPI flash to store the voice source and card numbers. The module has a software update. The modulation type is ASK using coil antenna.
