

Remote Controll Circuit Description

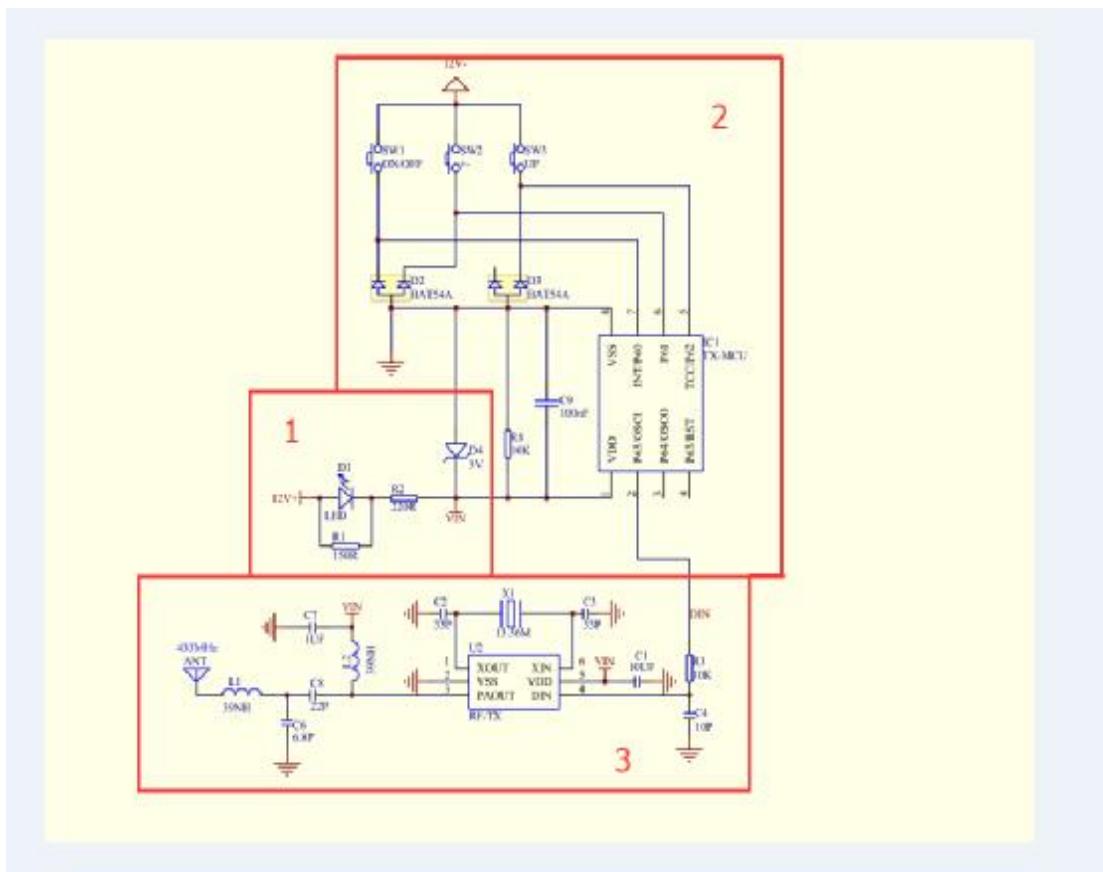

Image 1. 12V battery through LED working Indicator light current-limiting to 3V Regulator circuit

Image 2. EM78P153 will receive button command when pressing any buttons, send out digital signal of corresponding coding to transmitting chip PT4455.

Image 3. By modulating 433MHz signal internally, transmitting chip PT4455 will transmit controller program command of remote control from antenna when received digital signal of EM78P153.
