

## Justification of Labelling

FCC ID: 2AERJ-O-01

Model Name: O

The label exhibit of the FCC filing showed the location of the label on the inside of the antenna access panel.

According to section 4 in KDB 784748 D01, as an option to placing the FCC label on the exterior of the device, the FCC label may be placed in a user accessible area if the following conditions are met:

| Requirement from KDB 784748 D01   | Justification   |
|---|---|
| The device is handheld (notebook computers are considered as handheld);   | The O is a Dog Collar system and is considered a handheld device.   |
| The FCC identifier is visible at the time of purchase. Marketing the device without the battery installed when the label is in the battery compartment is acceptable. The FCC ID on the box, or additional documentation directing the user where to find the FCC label, also satisfies this requirement; | The included User's Guide (under the FCC section) directs the user where the FCC label is located and satisfies this requirement.   |
| The user accessible area must not require any special tools for access, and the FCC label must not be placed on a removable part;   | The antenna access panel where the label is affixed to is a functional panel that provides mechanical stability and environmental protection and must be installed on the O for proper function of the system in all specified environments; therefore, it is not considered a "removable" part. The access panel is removed using a Philip screwdriver which is not considered a special tool. |
| The FCC ID, Model Number, or FCC logo must be on the label and must meet all general labeling requirements or policies that apply for Certification, Verification or DoC.   | The label meets all general labeling requirements.  |
| The chosen location is the only practical location for the label.   | The O is subject to many rigorous outdoor environments, which can lead to the exterior of the unit being scratched, rubbed, and otherwise defaced. The location for the label was chosen to be on the inside of the access panel so that it will not be rubbed off or otherwise damaged.  |
| The antenna access panel must be unique to this certification product.  | The antenna access panel is a custom molded plastic part which is designed to fit around the antennas and attach to the collar base. The access panel is only designed to fit this system with this FCC ID and is not made to fit any other product from this manufacturer or any products from any other manufacturer.   |
