

DTS-UNII Device Declaration

To whom it may concern,

We, Ring LLC declare that the device FCC ID: 2AEUPBHABV002 operates as:

- (1) DFS Device ☐ Master
 ☐ Client with Radar Detection Capability
 ☒ Client without Radar Detection Capability

(2) Active / Passive Scanning, ad-hoc mode access point capability

Frequency Band (MHz)	Active Scanning (the device can transmit a probe (beacon))	Passive Scanning (the device listens only)	Ad-Hoc Mode or Wi-Fi Direct Capability	Access Point Capability

(3) Country Code Selection Ability Yes ☐ No ☒

If Yes, explain how it was implemented. - N/A

(4) Does this device meet §15.202 requirement? Yes ☒ No ☐

☐ A master device is defined as a device operation in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode, it is able to select a channel and initiate a network by sending enabling signals to other devices.

☒ A client device is defined as a device operating in a mode in which the transmissions of the device are under control of a master. A device in client mode is not able to initiate a network.

(5) For client devices that have software configuration control to operate in different modes (active / passive scanning) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how software and / or hardware is implemented to ensure that proper operation modes cannot be modified by the end user or an installer.

☒ Apply ☐ Not Apply (If apply, provide an explanation on how this is implemented)

Factory set.
