

**Statement of compliance to
Maximum Permissible Exposure (MPE)
No. 170400689SHA-002**

Applicant : Shanghai New Terminal Industrial Co., Ltd.
Rm812, Wujiaofengda Building, No.48 Zhengyi Road, Shanghai
200433 China

Manufacturing site : Dongguan Speedtek Electronic Co.,Ltd.
3F, 6 Building, Yingshuo Industrial Park, 177 Wenming Rd.,
Qiaotou Town, Dongguan, Guangdong, 523520 China

Product Name : LED Bluetooth Work Lamp

Type/Model : WL22FM, WL22BT

According to §2.1091, §2.1093 and §1.1307(b), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Power density (S) is calculated according to the formula:

$$S = PG / (4\pi R^2)$$

Where S = power density in mW/cm²

P = transmit power in mW

G = numeric gain of transmit antenna (numeric gain=Log-1(dB antenna gain/10))

R = distance (cm)

The calculations in the table below use the highest gain of antenna for client EUT. These calculations represent worst case in terms of the exposure levels.

Frequency band	Power		Antenna Gain		R	S	Limits
(MHz)	dBm	mW	dBi	(Numeric)	(cm)	(mW/cm ²)	(mW/cm ²)
2402 - 2480	2.323	1.71	0	1	20	0.0003	1

Note: 1 mW/cm² from 1.310 Table 1

Appendix I

Definition below must be outlined in the User Manual:

To satisfy FCC RF exposure requirements, a separation distance of **20** cm or more should be maintained between the antenna of this device and persons during device operation.
To ensure compliance, operations at closer than this distance is not recommended.
