Quick Start Guide

Welcome

Let's get you set up.

Step 1 Placing your device

Place your Poynt Smart Terminal wherever you normally accept payments. It has two screens - the bigger screen should face in towards the merchant, and the smaller should face out towards your customer. Make sure it's in a place where it can connect to Wi-Fi, or plug into Ethernet.

Step 2 Plugging-in

Your device comes with a power dock that is used to charge your device. Just plug in the dock, and then place the device onto it to charge. If you want to secure your dock to your counter, you can remove the plastic film from the bottom to stick it down. Make sure your dock faces the correct way!

Step 3 Load Printer

The Poynt Smart Terminal is equipped with a built-in printer. To use the printer, you'll need to load a roll of paper. Lift the latch on the printer compartment, unwrap a roll of paper and insert as shown.

Step 4 Power-on

To power on your device, press and hold the power button on the bottom of the device for 3 seconds. Then, just follow the on-screen instructions to activate and connect your Poynt Smart Terminal to your bank. After that, you're ready to start accepting payments.
