## 2. Introduction

The measurement procedure described in American National Standard for Methods of Measurement of Radio-Nose Emissions From Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz (ANSI C63.4-2014) was used in determining radiated and conducted emissions emanating from **SL CORPORATION. Wireless Charger (Model name: WC-LP11)**

These measurement tests were conducted at **GUMI UNIVERSITY EMC CENTER**.

The site address is 37 Yaeun-ro, Gumi-si, Gyeongsangbuk-do, 730-711, South Korea

This test site is one of the highest point of GUMI UNIVERSITY at about 200 kilometers away from Seoul city and 40 kilometers away from Daegu city. It is located in the valley surrounded by mountains in all directions where ambient radio signal conditions are quiet and a favorable area to measure the radio frequency interference on open field test site for the computing and ISM devices manufactures. The detailed description of the measurement facility was found to be in compliance with the requirements of §2.948 according to ANSI C63.4 (2014)

## 6. Test Result

### 6.1 Test Setup

### 6.2 Measurement Procedure

The RF exposure test was performed on table in anechoic chamber. The measurement probe was placed at test distance ( 15 cm) which is between the transmitting coils and the geometric center of probe. But, The distance from the top surface of the device to the measurement probe is 20 cm. The highest emission level was recorded and compared with limit as soon as measurement of each points (Side 1 ~ 6) were completed. The EUT were measured according to the dictates of KDB 680106 D01v03.

### 6.3 Equipment Approval Considerations.

The EUT does with item 5.a) of KDB 680106 D01v03

- a) Power transfer frequency is less than 1 MHz  
- The device operate in the frequency range from 110 kHz  $\pm$  5 kHz
- b) Output power from each primary coil is less than 15 watts.  
- The maximum field strength of fundamental : 73.32 dB $\mu$ V/m at 3 m. The EIRP calculation is reference to KDB 789033  
\*  $EIRP[dBm] = E[dB\mu V/m] + 20\log(d[meters]) - 104.77 - 4.8 \text{ dB}, d = 3 \text{ m}$   
\*  $73.32 \text{ dB}\mu V/m - 95.2 - 4.8 = -26.68 \text{ dBm EIRP}$   
\* The output power from primary coil is 0.001 5 mW
- c) The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils  
- The EUT are consist of 3 charging coils using A13 coil below coupling only between individual pairs of coils. Refer to “APPENDIX G: INTERNAL PHOTOGRAPHS - page 5 and page 6”.
- d) Client device is inserted in or placed directly in contact with the transmitter  
- Client device is placed directly in contact with the transmitter. Refer to following photo.

- \* Blue box: EUT  
\* Green box: Client device

- e) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).
- f) The aggregate H-fields strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit.  
- The EUT field strength levels are compiled to 50 % MPE limits. Refer to following test results.  
- 0.417 A/m (maximum measure value) < 0.815 A/m (30% MPE limit)

#### 6.4 Environmental evaluation and exposure limit according to FCC CFR 47 part 1, 1.1307(b), 1.1310

§1.1310 : The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of FCC part 2.1093 of this chapter

Note 1 to Table 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

Note 2 to Table 1: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.
