

Ei Wa8 Smart Watch Instructions

2 cover the charging box, is installed

4.Remove the screw using special screwdriver in the right direction, insert the SIM card

CPU:	MTK6572 Cortex A7 Dual core 1.3GHz
RAM:	512MB DDR2,
Internal Memory	4GB Nand flash
OS:	Android 4.4.2
Display:	1.54" OLED, 240 x 240
Touch:	Capacitance Touch
2G/3G Module:	GSM 850/900/1800/1900 WCDMA 1900MHz
BT:	BT4.0
GPS:	YES
Wifi:	802.11b/g/n
Camera:	3.0M
G-Sensor:	Support
FM:	Support
Office temperature:	10°C...+50°C/+14°F...+122°F
Storage temperature:	- 30°C...+60°C/-22°F...+140°F
Speaker :	1. 0W/ 8 Ω
Battery	600mAh

Smart watch	1pcs
Charging box	1pcs
USBline	1pcs
instructions	1pcs
The screwdriver	1pcs

Ce certification
CE mark is used to label compliance with EU EMC Directive 89 / 336 / EEC.
3C certification
CCC mark indicates the product through the 3C certification.

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
 - (1) This device may not cause harmful interference and
 - (2) This device must accept any interference received, including interference that may cause undesired operation.
2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If interference is found, you are encouraged to take one or more of the following measures to correct the interference:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Your wireless Smart Watch is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless Smart Watch employs a unit of measurement known as the Specific Absorption Rate (SAR). The FCC has set the SAR limit at 1.6 W/kg. Tests for SAR are conducted with the watch transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the watch while operating can be well below the maximum value. This is because the watch is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a watch model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model watch when tested for use at the mouth is 0.795W/Kg and when worn on the wrist, as described in this user guide, is 0.19W/Kg (Wrist-worn measurements differ among watch models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various watches and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model watch with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model watch is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/efccid> after searching on FCC ID: **2AFNWWA08** Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wireless.com>. * In the United States and Canada, the SAR limit for mobile watches used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's mouth, including the antenna.

This device complies with Industry Canada licence-exempt RSS standard(s).
Operation is subject to the following two conditions:
(1) This device may not cause interference, and
(2) This device must accept any interference, including interference that may cause undesired operation of the device.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
End user must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The mobile device is designed to meet the requirements for exposure to radio waves established by the Federal Communications Commission (USA). The requirements set a standard limit of 1.6 W/kg, averaged over one gram of tissue.
The highest SAR value reported under this standard during product certification for use when properly worn at the mouth is W/kg and when worn on the wrist is W/kg.

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Cet équipement est conforme aux limites d'exposition aux rayonnements de la FCC définies pour un environnement non contrôlé. L'utilisateur final doit respecter les instructions de fonctionnement spécifiques pour satisfaire la conformité aux expositions RF. Cet émetteur ne doit pas être co-localisé ou opérer en conjonction avec une autre antenne ou émetteur.

L'appareil mobile est conçu pour répondre aux exigences en matière d'exposition aux ondes radio établies par la Federal Communications Commission (Etats-Unis). Ces exigences définissent la valeur SAR limite à 1.6 W/kg, en moyenne pour un gramme de tissu.

La valeur SAR la plus élevée pour ce modèle de téléphone testé à l'oreille est W/Kg et lorsque porté sur le corps est W/Kg. L'échelle maximale

Cet appareil a été testé pour des opérations portées sur le corps typiques. Pour se conformer aux exigences d'exposition aux radiofréquences, une distance minimale de 10 mm doit être maintenue entre le corps de l'utilisateur et le combiné, y compris l'antenne. Les pinces de ceinture, les étuis et autres accessoires similaires utilisés par cet appareil ne doivent pas contenir de composants métalliques. Les accessoires portatifs qui ne répondent pas à ces exigences peuvent ne pas se conformer aux exigences d'exposition RF et doit être évitée. Utilisez uniquement l'antenne fournie ou une antenne approuvée.
