RADIATED EMISSION TEST SETUP BELOW 1GHz

RADIATED EMISSION TEST SETUP ABOVE 1GHz

The image shows an Agilent MXA Signal Analyzer in a laboratory setting. The device is a large, light-colored rack-mountable unit. The screen displays a spectrum plot with a yellow trace showing a peak at 2.450 GHz. The plot is titled 'Center Freq 2.4500000 GHz' and 'Mar2 2.450 000 0 GHz - dBm'. The x-axis is labeled 'MHz' and the y-axis is labeled 'dBm'. The plot shows a peak at 2.450 GHz with a power level of approximately -10 dBm. The analyzer has a control panel with various buttons and a large knob. A black cable with a SMA connector is plugged into the front panel. The cable is connected to a small electronic component on a white foam base. The component has a green PCB and a small antenna. The setup is used for testing the performance of the component at 2.45 GHz.
