FCC ID: 2AH2J-KAMIDONGLE

According to KDB 447498 D01 v06 General RF Exposure Guidance

At 100 Mb to 6 Gb and for test separation distances \leq 50 mm, the SAR test exclusion threshold is determined according to the following

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $x [\sqrt{f(\Omega t)}] \le 3.0$

1. SAR test exclusion threshold

SAR test exclusion thresholds(5 mm) = $3 \times 5 / (\sqrt{2.480}) = 9.525$ mW

Max. tune-up	SAR Test Exclusion
tolerance(mW)	Thresholds(5 mm) (mW)
1	9.525

Calculation value : 1 (mW) / 5 (mm) x $\sqrt{2.480}$ = 0.31

So, Calculation value ≤ 3.0

Remark:

- -Max. conducted power (mW): maximum tolerance power of EUT (-1.39 dBm)
- -Max. conducted power 0.73 (mW) is closet 1 (mW), so 1 (mW) was calculated.
- -When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
