

## Configure controlserver network settings for eBox-connection

### Step-by-step tutorial

1. Connect the controlserver to the AG501 via the yellow LAN-cable (Figure 1).

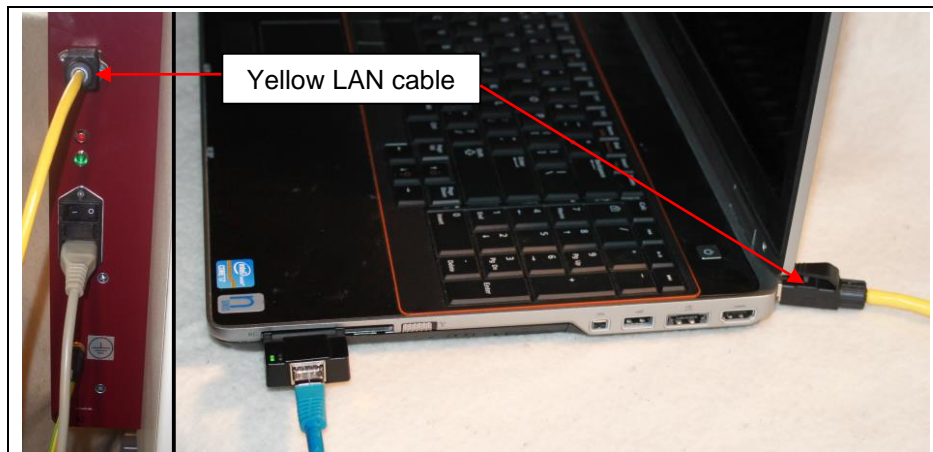

Figure 1: E-Box and Control Server cable connections

2. Right-click on the LAN-icon in the top right corner (Figure 2-1) and select *Edit Connections* in the drop-down menu (Figure 2-2).

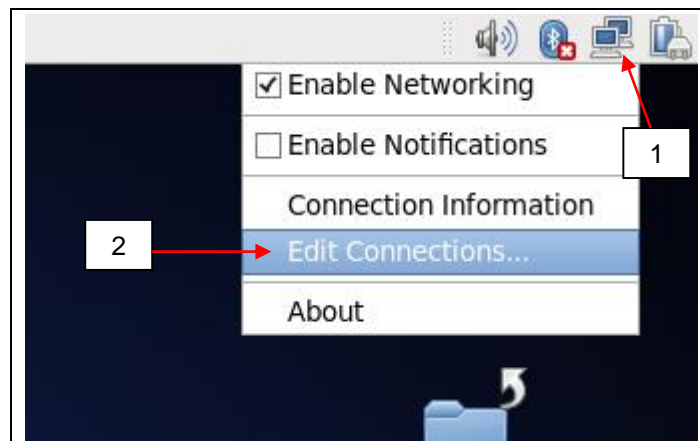

Figure 2: Edit network connections

3. Select *System em1* (Figure 3-1) and click on *Edit* (Figure 3-2).

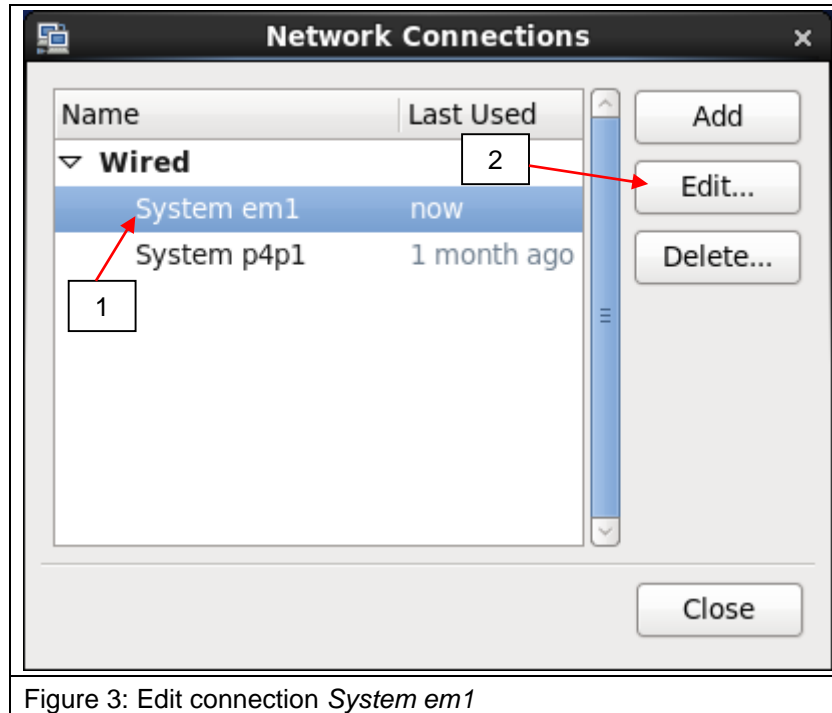

Figure 3: Edit connection *System em1*

4. Select the *IPv4 Settings* tab (Figure 4-1) and configure the settings as shown in Figure 4.  
Click *Routes* (Figure 4-2) to configure the routing.
