

FCC ID: 2AHGRLANSP3

According to 447498 D01 General RF Exposure Guidance v06 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $*\cdot[\sqrt{f(GHz)}] \le 3.0$

The Max. tune-up power is 4 dBm and power is

4.0 dBm (2.51 mW) @ 2480 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

(2.51 mW / 5 mm) * (2.480 GHz ? 0.5) = 0.8

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [$\sqrt{f(GHz)}$] = 0.8 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.

Note:

 The tune up power referred the AVG power of the test report TMWK2202000644KR for SAR test exclusion purpose.
